

**25<sup>th</sup>**

*Anniversary of the  
S.C. Solid Waste Policy  
& Management Act*

# South Carolina Solid Waste Management Annual Report

FISCAL YEAR **2015**

***Catherine E. Heigel, Director***

S.C. Department of Health & Environmental Control

# About this Report

The mission of the S.C. Department of Health and Environmental Control (DHEC) is to protect human health and the environment.

For the past 25 years, the S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws §§ 44-96-10 et seq. – has played an integral role in furthering this mission. The Act establishes a comprehensive framework for the safe, cost-effective and efficient management of solid waste. For example it authorizes DHEC to:

- **Develop and implement a regulatory framework for the proper siting, design, construction, operation and closure of solid waste management facilities** (Section 44-96-260);
- **Develop a state solid waste management plan** (State Plan) (Section 44-96-60) and requires county governments or regions to develop plans that are consistent with the State Plan (Section 44-96-80);
- **Promote waste reduction, recycling and resource conservation before disposal** (Section 44-96-50); and
- **Set waste reduction and recycling goals** (Section 44-96-50).

The Act (Section 44-96-60) also requires DHEC to publish an annual report based in part on information that counties and solid waste facilities are required to provide.

## SECTION

“The South Carolina Solid Waste Management Annual Report” must be submitted to the Governor and General Assembly annually by March 15.

This report, which reflects solid waste management activities in fiscal year (FY) 2015 (July 1, 2014 to June 30, 2015), includes:

- **The amount of material recycled by commodity and county;**
- **The amount and type of solid waste disposed of by county as well as imported and exported solid waste;**
- **A listing of permitted solid waste facilities;**
- **A summary of the state’s used motor oil recycling program;**
- **Recycling data for state agencies and colleges/universities;**
- **A summary of the economics of solid waste management;**
- **An update on solid waste planning;**
- **Key state programs that assist local governments in meeting the requirements of the Act; and**
- **Recommendations for improving solid waste management.**

SECTION 7: Recycling – State Agencies & Colleges/Universities .....	31
SECTION 8 Recycling – The State & Counties at a Glance.....	35
SECTION 9: Disposal .....	83
SECTION 10: Permitted Solid Waste Facilities.....	98
SECTION 11: Solid Waste Planning .....	103

### Acknowledgements

The “South Carolina Solid Waste Management Annual Report for Fiscal Year 2015” is submitted by the S.C. Department of Health and Environmental Control (DHEC) in compliance with the S.C. Solid Waste Policy and Management Act of 1991 (S.C. Code of Laws § 44-96-60). Additionally, Act 119 of 2005 mandates that agencies provide all reports to the General Assembly electronically. This report was published on March 15, 2016 by DHEC’s Office of Solid Waste Reduction and Recycling. The report serves as an update to the State Plan.

## What is measured?

This report measures two types of solid waste and how they are managed – municipal solid waste (MSW) and total solid waste (TSW). See Table 1.1 for definitions and examples of each.

## Who reports?

Permitted solid waste facilities are required by the Act and subsequent regulation to submit annual reports on disposal data to DHEC. County governments, regions, state agencies and state-supported colleges/universities are required to report recycling data annually to DHEC (Section 44-96-80 and Section 44-96-140).

**TABLE 1.1: What is MSW and TSW?**

MSW	TSW
South Carolina voluntarily adopted the U.S. Environmental Protection Agency’s definition of MSW with few exceptions in October 2000. This change was done as part of nationwide effort to have consistency among the states on how solid waste disposal and recycling activities are measured.	TSW provides a much more comprehensive look at how much waste is generated, disposed of and recovered than MSW.
MSW is defined (Section 44-96-50) as certain waste items generated from residential, commercial, institutional and industrial sources. MSW includes appliances, automobile tires, newspapers, office paper, cans, bottles, food waste, yard trimmings (mulched or composted) and packaging. South Carolina also added tire-derived fuel, yard trimmings used as boiler fuel and motor oil recycled by do-it-yourself oil changers to its definition of MSW.	For the purposes of this report, TSW includes MSW as well as construction and demolition (C&D) debris, land-clearing debris, industrial process waste, automobile bodies and municipal sludge as well as combustion ash.

Recycling data also is collected from municipalities, businesses and the recycling industry (and allocated to the counties where the material was generated), but these entities are not required to report. Because recycling data reporting is strictly voluntary, data collection from these sources is inconsistent from year to year. (See the recommendation for improving reporting on page 6).

## When Using this Report

All data is carefully vetted. Recycling and disposal data are combined to determine the solid waste generation tonnage. The state’s recycling rate is the amount of material recycled divided by amount of waste generated. When reviewing the tables, keep in mind that in general recycling tonnage is rounded to the nearest hundredth and disposal data is rounded to the nearest ton. Some totals do not add up due to rounding.

### Recycling Rate Equation

The equation below is used for calculating the MSW and TSW recycling rates.

$$\text{RECYCLING RATE (\%)} = \frac{\text{AMOUNT RECYCLED}}{\text{AMOUNT GENERATED*}} \times 100$$

\*Generated = Recycled + Disposed Of

## MSW Goals

### 40% by 2020

South Carolina’s goal is to recycle at least 40 percent of its MSW by FY20.

### 3.25 p/p/d by 2020

The state’s goal is to reduce MSW disposal to 3.25 pounds (or less) per person per day (p/p/d) by FY20.

# The Year at a Glance

## SECTION

# 2

This report provides an overview of the amount of solid waste generated, disposed of and recycled in South Carolina for fiscal year (FY) 2015 (July 1, 2014 to June 30, 2015) as required by the S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws §§ 44-96-60.

This report defines and measures two specific types of solid waste – municipal solid waste (MSW) and total solid waste (TSW). (See page 2 for definitions.) As required by the Act, the focus of this report is on MSW (Section 44-96-50).

### S.C. Recycling Rate

FY15

26.5%

### S.C. Waste Reduction Rate

FY15

3.47 p/p/d

\*Pounds Per Person Per Day

### A Note on the Numbers

It is important to note that the recycling data collected for this report does not completely reflect recycling efforts across South Carolina.

The Act requires permitted solid waste facilities (e.g., landfills) to report disposal data to DHEC resulting in 100 percent of this information being collected. The Act also requires county governments, state agencies and state-supported colleges and universities to report the amount and type of material recycled. Businesses are not required to report, but can voluntarily provide information on their recycling activities.

It is estimated that MSW generation is about 60 percent residential and 40 percent commercial. Given that businesses are not required to report, the data collected from this source is inconsistent and incomplete and impacts the state's annual MSW recycling rate.

## The Top 10 Takeaways for FY15

- 1 In FY15, the amount of MSW generated (recycled plus disposed of) was 4,159,578 tons. Of that amount, 1,101,190 tons (26.5 percent) were recycled and 3,058,388 tons (73.5 percent) were disposed of in MSW landfills including MSW generated in South Carolina but disposed of out of state.
- 2 The amount of MSW disposed of decreased 9,554 tons (0.31 percent) in FY15 from the previous FY.
- 3 The state's per capita waste reduction rate was about the same at 3.47 pounds.
- 4 The amount of MSW recycled decreased 167,903 tons (13 percent) in FY15.
- 5 On average, each South Carolinian recycled 453 pounds of MSW in FY15.
- 6 The amount of MSW recycled fell for the second straight FY. It was, however, the seventh consecutive FY (and 11 of the past 12 FYs) that South Carolinians recycled more than 1 million tons of material. More than 18 million tons of MSW have been recycled since FY01.
- 7 In FY15, the amount of MSW disposed of dropped by more than 400,000 tons from the record-high 3.4 million tons disposed of in FY06.
- 8 Residential recycling fell 33,218 tons in FY15 from the previous FY – mostly due to a significant drop in the amount of yard trimmings recovered.
- 9 In FY15, the amount of TSW disposed of increased by more than 398,000 tons\* from the previous FY.
- 10 The amount of TSW recycled dropped by half falling from 6,030,557 tons in FY14 to 2,968,766 tons in FY15.

**NOTES:**

1. The population data used in this report reflects the most recent estimate available from the U.S. Census Bureau.
2. See Table 9.11 on page 93 for a breakdown by county of MSW recycling, disposal and generation.

# Recommendations for Improving Solid Waste Management

## SECTION

# 3

The S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws § 44-96-60 – requires the S.C. Department of Health and Environmental Control (DHEC) to make annual recommendations on how to improve solid waste management in the state.

Much has been accomplished since the passage of the Act. For example, South Carolina has fewer landfills and less illegal dumping. More rigorous requirements for landfills and other solid waste facilities are in place. Solid waste management technology has dramatically improved. Greenhouse gas emissions have been reduced.

At the same time, the state’s recycling infrastructure has grown to 93 curbside programs, 580 recycling drop-off centers and 891 used oil collection centers for do-it-yourself oil changers. Each of South Carolina’s 47 state parks and historic sites offer recycling. Companies set zero waste goals. The state’s recycling industry is growing with more than 520 companies and a \$13 billion annual economic impact.

While South Carolina can enjoy the many accomplishments of the past 25 years, much remains to be done.

---

*While South Carolina can enjoy the many accomplishments of the past 25 years, much remains to be done.*

---

With more individuals, businesses, organizations, schools, colleges/ universities and government agencies recycling more than ever, nearly 74 percent of the MSW generated in South Carolina was disposed of in landfills. Disposal of valuable material is a waste of resources and lost economic opportunity. What steps need to be taken to keep it out of the landfill?

More specifically, how do we prevent and recover more food waste? How do we improve construction and demolition (C&D) debris recycling? How does the state address waste-to-energy and other new technologies? What needs to be done to grow South Carolina’s recycling industry and recycling markets?

What can local governments do to better manage the rising cost of the essential solid waste services that they offer?

Beyond these challenges, there is a nationwide shift in thinking from traditional waste management (e.g., disposal, recycling) to sustainable materials management (SMM). This new approach is centered on using and reusing materials more productively throughout their entire life cycle. Looking at how materials are used throughout their life cycle provides new opportunities to reduce environmental impacts, conserve resources and lessen costs.

South Carolina is well prepared to make this transition and meet all its challenges by building on the foundation created by the policies and goals outlined in the Act. These goals and policies include:

- **Ensure that landfills and other solid waste facilities are properly sited, designed, constructed, operated and closed** to protect human health and the environment;
- **Promote regionalization** to manage solid waste more efficiently;
- **Promote waste reduction, reuse and recycling** above other methods that preclude further use of the material;
- **Work towards achieving South Carolina’s waste reduction and recycling goals;**
- **Work with county governments to create and maintain 20 years of landfill capacity;** and
- **Provide and improve outreach, education and access of information** to residents, businesses, organizations, schools and others on solid waste management issues.

The recommendations that follow support the policies and goals listed above. They are the key steps that South Carolina can take to manage its waste more safely and efficiently, meet its waste reduction and recycling goals and realize more of the economic benefits of recycling.

# 1

## Update the State Plan.

The Act (Section 44-96-60) requires DHEC to develop a state solid waste management plan (State Plan) and outlines the types of information that must be part of the publication. The State Plan sets the direction, purpose and vision for South Carolina’s management of its solid waste. Counties and regions must develop solid waste plans that are consistent with the State Plan. Smart planning at both the state and local level provides South Carolina the opportunity to manage its solid waste in a safe, efficient and environmentally responsible manner and move towards meeting the state’s waste reduction and recycling goals.

While the State Plan is updated through the publication of the S.C. Solid Waste Management Annual Report, it has not been revised since 1999. The State Plan needs to be revised to reflect new issues, new recyclable material and significant changes in technologies and practices as well as the knowledge gained from successes and shortcomings in the past 15-plus years. A new State Plan also is necessary to meet the responsibility of providing up-to-date data and an overall direction for county governments as they update their solid waste plans.

### RECOMMENDATION

**Publish a new State Plan by June 30, 2017.**

# 2

## Improve reporting.

The focus of this report, as required by the Act, is MSW (see definition on page 2) and specifically the state’s MSW recycling rate. It is important to know that South Carolina’s recycling rate reflects what is reported to DHEC on an annual basis – not necessarily what is actually recovered for recycling. Currently, only county governments, state agencies and state-supported colleges/universities are required to report recycling efforts to DHEC. Businesses are not required to report – so it is unclear how much recycling data is missed. Lack of reporting by businesses becomes more significant when it is generally accepted that MSW generation is roughly 60 percent residential and 40 percent commercial.

*Lack of reporting by businesses becomes more significant when it is generally accepted that MSW generation is roughly 60 percent residential and 40 percent commercial.*

There are efforts to secure commercial recycling numbers. Many counties ask businesses for recycling information, but most local governments don’t have the resources to address this issue. DHEC, through its S.C. Smart Business Recycling Program and Green Hospitality Program, provides a Web-based reporting tool. DHEC and local governments also work with processors to gather statewide commercial recycling tonnages. All of these efforts provide some numbers, but lead to incomplete and inconsistent reporting from year to year. It is important to note that permitted solid waste facilities are required to

report to DHEC all material disposed of in South Carolina landfills or exported for disposal. The state’s recycling rate is calculated by dividing the state’s total recycling tonnage by the state’s total generation tonnage (recycling total combined with disposal total). DHEC receives complete information on disposal and residential recycling, but incomplete information on commercial recycling. Given that, the state’s recycling rate is skewed and does not accurately reflect recycling efforts across all sectors.

With a goal to reduce per capita MSW disposal to 3.25 pounds or less and recycle 40 percent of all MSW generated by 2020, it is critical that the reporting of recycling efforts across all sectors (residential, commercial/institutional and industrial) improve.

### RECOMMENDATIONS

**Continue providing technical assistance and training to local governments** to secure and provide accurate reporting of residential tonnages and ways to secure more recycling data from commercial and industrial sectors.

**Promote the benefits of having accurate and comprehensive recycling data.** Governments and businesses that comprise the state’s recycling industry will be able to properly plan, determine recycling behaviors from different sectors, measure recycling of specific commodities, and more efficiently maintain and/or develop recycling markets.

**Encourage large industries, businesses, recycling processors and haulers to report recycling data.** Work on this recommendation with the S.C. Department of Commerce. If this effort fails, consider updating the Act to require mandatory reporting for recycling processors and businesses with more than 50 employees.

### 3

## End the myth that recycling is free.

Recycling is not free. It never was. When recycling re-emerged into the nation’s consciousness in the 1990s, it was almost always promoted to residents that recycling will pay for itself through the revenue earned from the sale of the recovered material combined with avoided disposal costs. Many residents believed it then and still believe it now as well as a second myth that every material recycled has great value.

Both of these myths need to end. Residents must be made aware that they are paying for two basic solid waste management options: disposal and recycling. Both

management choices help protect human health and the environment. But once a material is disposed of in a landfill, it has no additional value and produces no additional economic activity.

Conversely, recycling offers a chance to earn revenue, avoid disposal costs and generate further economic activity. Material that is recycled and reintroduced into a manufacturing process supports economic growth and development through the creation of businesses, markets and jobs necessary to support those activities. The economic impact study (see Section 4) completed in 2014 shows the significant, positive impact the recycling industry has on South Carolina’s economy.

Residents also need to know that recyclables are commodities that are subject to the same market

fluctuations in value as other commodities. Unfortunately, it is generally accepted that the market value of recyclables are more volatile than other commodities.

Those highs and lows are unpredictable. When prices are good, revenues are good. When prices are down, programs are more stressed.

Local governments should carefully consider and measure the true costs of any option to managing solid waste and communicate that information to residents. All aspects should be considered including long-term management, monitoring, post-closure, environmental impacts and lost opportunities for material recovery.

*Residents must be made aware that they are paying for two basic solid waste management options: disposal and recycling.*

### RECOMMENDATIONS

**Conduct research to develop information and tools that local governments can use to promote recycling** centered on the economic impact of recycling. This work will be done in partnership with the S.C. Department of Commerce and University of South Carolina’s Moore School of Business. This information should include an analysis comparing the life-cycle costs of disposal to recycling and of the jobs created by each method of material management.

**Develop an information campaign to increase awareness to residents of the costs of solid waste management** (i.e., disposal, recycling). Integrate that campaign into the RecycleMoreSC campaign and other potential venues.

**Local governments should consider not having or promoting a separate charge for recycling or a specific commodity** (e.g., electronics), but rather provide one cost with an explanation of all of the solid waste services offered.

### Recycling is big business in South Carolina.

“The Economic Impact of the Recycling Industry in South Carolina” is a 2014 study commissioned by DHEC, the S.C. Department of Commerce and others. It shows that the industry, which is comprised of more than 520 companies, is responsible for more than 22,000 direct jobs (a 44 percent increase from 2006), \$2.7 billion in annual labor income (up 80 percent from 2006) and \$329 million in state and local taxes each year.

The study was completed by Dr. Frank Hefner of the College of Charleston’s Department of Economics and Finance. To view the complete study, please visit [www.scdhec.gov/HomeAndEnvironment/Recycling/EconomicImpact/](http://www.scdhec.gov/HomeAndEnvironment/Recycling/EconomicImpact/).

## 4 Maximize food waste reduction and recovery opportunities.

Food waste is the top item thrown away by Americans accounting for 35.2 million tons (21 percent) of the nation's discards in 2013 according to the U.S. Environmental Protection Agency (EPA). Nationally, only 5 percent of the food waste generated was recovered.

*Nationally, only 5 percent of the food waste generated was recovered.*

Applying those percentages to South Carolina's MSW generation, the state produced an estimated 607,298 tons of food waste in FY15 and recovered only 1 percent (6,083 tons).

Clearly, if South Carolina is to achieve its per capita waste reduction (3.25 pounds or less) and recycling

### Eliminating Food Waste

Food waste is much more than a solid waste issue. In the United States, it is estimated that at least 31 percent of edible food goes to waste – a loss valued at more than \$160 million according to EPA. A family of four on average throws away about \$1,500 of uneaten food ever year according to the U.S. Department of Agriculture (USDA). At the same time about one in six Americans – about 50 million people overall – live in food insecure households according to a November 2014 study.

Added to these numbers is the loss of natural resources used to produce food that is never eaten. Steps are being taken to address this issue. In September 2015, USDA and EPA announced America's first food waste reduction goal – committing to a 50 percent reduction by 2030.

In November 2015, another step was taken in South Carolina when DHEC, EPA and Southeast Recycling Development Council sponsored the Food Recovery Summit in Charleston. The event ended with a commitment to develop a strategic vision and plan to move forward and achieve the national goals.

goals (40 percent of the MSW stream) by 2020, the state must include a concentrated focus on increased food waste prevention and recovery.

Food waste reduction and recovery includes:

- **Preventing food waste before it is created;**
- **Donation;** and
- **Composting and other options** (e.g., anaerobic digestion).

These actions have significant economic, social and environmental benefits. Preventing food waste can save businesses money through improved purchasing and food preparation practices that result in lowered disposal costs. Donation, done properly, is a safe and easy way to provide much needed food to individuals. Composting turns excess food that is not fit for consumption into a nutrient-rich soil amendment.

### RECOMMENDATIONS

**Develop and promote best management practices to reduce food waste.** Hospitality facilities, colleges/universities, institutions (e.g., nursing homes, hospitals) and businesses should be encouraged to closely track food waste, change purchasing habits and train staff to ensure the efficient preparation of food.

**Continue to promote food waste prevention and recovery throughout the region** through the partnership with the Southeast Recycling Development Council.

**Continue to promote food recovery** through the Green Hospitality Program and the S.C. Smart Business Recycling Program.

**Increase food recovery on military bases in South Carolina** by continuing to work with the Department of Defense Alliance stakeholder group.

**Find a regional solution for organic material in the Midlands** by continuing to work with EPA, Fort Jackson, the University of South Carolina, S.C. Department of Commerce and local governments.

**Increase the quality and quantity of recovered food waste** by continuing to work with all stakeholders to improve infrastructure as possible.

**Develop a stakeholder group to encourage efficient, proper practices of food donation.**

**Develop a campaign to educate residents on strategies for reducing food waste.** Work with local governments and state agencies to provide technical assistance, outreach programs and grant funding if possible. As part of this effort, develop a comprehensive Web site to include a one-stop shop of information for all stakeholders including a listing of food recovery options.

## 5 Compost more yard trimmings.

Yard trimmings comprise about 34.2 million tons (13.5 percent) of the nation's MSW waste stream according to EPA.

In South Carolina, it is estimated that more than 560,000 tons of yard trimmings were generated in FY15. Of that amount, only 35 percent (197,488 tons) was recovered.

Increased recovery of yard trimmings will decrease South Carolina's per capita disposal and increase the state's MSW recycling rate as well as conserve resources, produce nutrient-rich soil amendments and create jobs and businesses.

---

*Increased recovery of yard trimmings will decrease South Carolina's per capita disposal and increase the state's MSW recycling rate ...*

---

### RECOMMENDATIONS

**Composting should be encouraged from backyard to large-scale systems** and promoted to all stakeholders including households, schools, colleges/universities, businesses, U.S. Department of Defense facilities and other government entities.

**Promote residential and small-scale community composting.** This strategy includes working closely with local governments to offer technical assistance, outreach programs and grant funding to support residential compost bin sales.

**Attract businesses to South Carolina that want to set up large-scale composting operations** to recover more material, produce valuable products and create jobs by working with the S.C. Department of Commerce's Recycling Market Development Program and regional experts.

**Expand school composting programs.** Provide technical assistance, training and grant funding to increase the number of schools recovering organic material through composting and waste reduction. Develop partnerships through the "Action for a Cleaner Tomorrow" program to set up composting systems in elementary and middle schools.

**Map commercial compost operations, generators of food waste and markets** by continuing to work with the S.C. Department of Commerce Recycling Market Development Program.

## 6 Increase C&D debris recycling.

C&D debris is comprised of material that is generated during the construction, renovation and demolition of buildings, roads and bridges. C&D debris contains bulky, heavy material such as concrete, wood, metal, glass, new gypsum scrap, asphalt paving and other building components.

Reducing and recycling C&D debris conserves natural resources, saves landfill space, improves landfill stability and compaction, reduces the environmental impact of producing new material, creates jobs and reduces project expenses through avoided purchases and disposal costs.

Despite the many benefits, C&D debris recycling is only occurring at a small level and remains a significant challenge.

---

*C&D debris recycling is only occurring at a small level and remains a significant challenge.*

---

South Carolina, like other states, faces two obstacles to increased recovery – low disposal costs and lack of markets. There are limited markets in the state for C&D debris and even more limited markets for specific material such as shingles and gypsum wallboard.

In addition, it is almost always less expensive for contractors and builders to dispose of the material than take the time to separate, store and find a market. Limited markets also can lead to the creation of illegal stockpiles or dumped C&D debris, when collectors fail to either recycle or properly dispose of the material.

To encourage the recycling of C&D debris, many local governments throughout the United States have adopted policies and C&D bans. Some examples are mandating a 50 percent C&D debris recovery rate.

### RECOMMENDATIONS

**Develop and implement a plan to promote the benefits of C&D recycling** to all stakeholders that includes a Web-based clearinghouse and printed material (e.g., C&D manual, pocket guide, posters and signage).

**Encourage local governments to determine whether any policy change or bans would be effective** in increasing C&D debris recycling in their community.

# 7

## Manage electronics recycling programs efficiently.

Unwanted electronics, often called e-scrap, contain potentially hazardous material such as lead and mercury that can pose a risk to human health and the environment if not properly managed. Unwanted electronics also contain valuable material such as precious metals that can be recovered through responsible recycling.

Recycling electronics helps protect the environment, conserve resources and provide raw material for new products. Given that, South Carolina passed legislation in 2010 that banned the disposal of specific electronics in solid waste landfills effective July 1, 2011. In short, residents are required to recycle computers, computer monitors, printers and televisions. The legislation was revised on March 4, 2014 to add more specific requirements and recovery obligations for computer monitor and television manufacturers.

These obligations require a manufacturer of computer monitors or televisions to recycle or arrange to recycle either: 1) 80 percent of the weight

of computer monitors and televisions sold the previous year; or 2) join a representative organization (partnership) of manufacturers that provides recycling services to local governments proportionate to their market share for the previous year. Specifics of these requirements are outlined in the legislation.

If measured by the amount of material recovered, electronics recycling has been successful in South Carolina. If measured by cost to local governments to offer programs, it has been a costly endeavor. Despite funding assistance by computer monitor and television manufacturers as required by the legislation, recovery costs have dramatically increased the past several years, placing a severe burden on local government budgets.

### RECOMMENDATIONS

**Local governments should follow best management practices when collecting, storing and packaging material** to reduce human health and environmental risk as well as potentially increase revenue for material.

**Local governments should provide as much packaging and sorting to potentially increase revenue for material.**

# 8

## Increase recovery of hard-to-recycle items.

Many products that are part of the MSW stream are not easily recovered including carpet, paint, mercury-containing lamps, thermostats, rechargeable batteries, mattresses and many household goods (e.g., cleaners, pesticides). These products frequently are costly to recover, have limited markets and often contain hazardous material (e.g., mercury-containing lamps). There are several ways to address these products. One approach is to simply place a fee on the product when it is purchased that, in turn, is used to recover the material. Another approach is for industry to take the lead in recovering its product (e.g., Call2Recycle – the program that recovers rechargeable batteries). In this effort, industry provides outreach material, collection containers (almost always located in retail outlets) and shipping of the collected material to the recycling facility at no cost.

Another approach uses everyone involved with the product. The approach – known as product stewardship – is simply defined as all parties that

are involved in the design, manufacturing, selling and use of a product take responsibility for the environmental impact of that product throughout its entire life. Product stewardship addresses a number of factors including: the effectiveness of current collection and recycling of the product; costs to local governments to manage the material; disposal rates; toxic components of the product; interest and readiness of industry, government and markets; and life-cycle analysis.

There is only one product stewardship program in South Carolina – electronics – specifically computer monitors and televisions. By law, these manufacturers have recovery obligations that help fund the cost to recover these products. The state also is working with state and national groups involved in increasing the recovery of carpet.

### RECOMMENDATIONS

**Use nationally established programs to recover more material.**

**Work with all stakeholders to increase the collection of hard-to-recycle items.**

## 9 State agencies and colleges/universities should lead by example.

As part of South Carolina's effort to meet its waste reduction and recycling goals, state agencies and state-supported colleges/universities are required by the Act to recycle and buy recycled-content products (See specifics in the box below).

Beyond those requirements, state agencies as well as colleges/universities should lead by example. These stakeholders not only generate significant quantities of recyclables but also can use their considerable purchasing power to buy recycled-content products to support recycling markets and South Carolina's recycling industry.

### RECOMMENDATIONS

**Implement the Green Government Initiative to increase recycling and buying recycled-content products at state agencies.** This campaign includes technical assistance, training and recognition as well as tools to improve reporting of recycling activities as required by the Act.

**Promote the 7.5 percent price preference for recycled-content products** as outlined in the Act to ensure that it is consistently implemented.

**Develop a statewide system to track and report recycled-content purchases.**

**Update and promote the state's Environmentally Preferred Purchasing Policy.** Set up a stakeholder group to review and revise this policy.

**Stimulate new recycling markets through state agency procurement practices.** Educate purchasers on recycled-content products, particularly those on state contract. Ensure that the list of recycled-content products and specifications are updated annually as required by the Act.

## Recycling, Buying Recycled Requirements for State Government

The Act (Section 44-96-140) requires the General Assembly, Governor's Office and Judiciary – as well as state agencies and state-supported colleges/universities – to have waste reduction and recycling programs and report those recycling activities annually to DHEC.

This section of the Act also outlines requirements and goals for these stakeholders on purchasing recycled-content products. These requirements include:

1. A goal that 25 percent of products purchased contain recycled content;
2. A system to track and report those purchases annually to DHEC; and
3. A 7.5 percent price preference for recycled-content products.

South Carolina also established an Environmentally Preferred Purchasing Policy in 2009 that provides additional information, standards, guidance and tools for state agencies as well as colleges/universities.

Learn more about the recycling efforts of South Carolina's state agencies and colleges/universities.

Visit [www.scdhec.gov/recycle](http://www.scdhec.gov/recycle) and select "Data and Reports."

# 10

## Local governments should maximize efficiency of their recycling programs.

Local government programs are the front line of solid waste management. These services – which represent a significant investment – include collection of garbage and recyclables through curbside programs and/or drop-off centers as well as programs for composting, electronics and hazardous household material.

According to full-cost disclosure reports submitted to DHEC, local governments spent more than \$323 million to manage solid waste in FY15 and more than \$1.6 billion since FY11.

While some of these costs are offset by avoided disposal costs and the revenue earned from the sale of recyclables, each program should always ask how it can be more efficient, more cost-effective and more successful.

*Local governments spent more than \$323 million to manage solid waste in FY15 and more than \$1.6 billion since FY11.*

### RECOMMENDATIONS

**Maintain an up-to-date solid waste plan** that focuses on minimizing the amount of material that is disposed of in landfills.

**Provide as much education and outreach as possible to residents.** Maintain up-to-date information on the Web. Review materials periodically. Make clear what is recyclable in the program and what is not.

**Use roll carts for residential recycling collection as possible.** The use of roll carts often increases participation and the amount of material collected.

**Promote the environmental and economic benefits of recycling to community decision makers.**

**Develop local or regional partnerships that can improve programs** (e.g., national retailers located in your community, local businesses, nearby local governments, schools, non-profits, other government agencies).

**Identify improvements that can be made without additional costs to programs** (e.g., adding a commodity).

**Partner with local businesses and recycling processors to encourage commercial waste reduction, recycling and reporting of these activities.**

## RecycleMoreSC Campaign Introduced to Boost Statewide Recycling

The RecycleMoreSC campaign is designed to reinvigorate recycling in South Carolina by:

- **Promoting the economic and environmental benefits of recycling;**
- **Providing tools to local governments to present a clear, consistent message across the state; and**
- **Challenging residents, businesses and others to do their part and recycle more.**

The campaign is the centerpiece effort of the 40by2020 Partnership. The partnership is a group of public and private stakeholders dedicated to sharing knowledge, coordinating resources and working together to help South Carolina meet or exceed its 40 percent recycling goal set for 2020.

The partnership includes Pratt Industries, Sonoco Recycling, the S.C. Beverage Association, PalmettoPride, the S.C. Department of Commerce and DHEC.

# 11

## Consider pay-as-you-throw programs.

Traditionally, residents pay for waste collection through property taxes or a fixed fee regardless of how much or how little waste they generate.

Pay-as-you-throw (PAYT) programs break that tradition by treating waste collection just like electricity, gas and other utilities where consumers pay for what they use. In PAYT programs, residents are charged for the amount of waste they throw away and not charged directly for recycling. This creates a direct economic incentive to recycle more and throw away less.

PAYT programs work. Many communities with PAYT programs have reported significant increases in recycling. In addition, PAYT programs often have proven to be an effective way for local

governments to offset increased solid waste management costs.

Setting up a PAYT program is not without its difficulties and will require careful consideration, planning, time and commitment. Still, this option should be considered. Local governments should not just continue to accept the traditional methods of managing waste.

As part this effort, residents need to understand the true cost of managing solid waste. See Section 4 for more information.

### RECOMMENDATIONS

Local governments should evaluate their programs and consider implementing a PAYT program.

Local governments should make their solid waste management program costs more transparent to residents.

# 12

## Enhance and strengthen education and outreach.

From elementary school students to local government decision makers, education, outreach and technical assistance are essential tools to help South Carolinians understand and promote the economic and environmental benefits as well as the challenges of recycling and encourage them to do their part and participate.

*South Carolina has the infrastructure to recycle far more material than is being recovered.*

South Carolina has the infrastructure to recycle far more material than is being recovered. The primary way to improve recovery is with successful outreach and education efforts that inspire people to change their behavior and make recycling a social norm.

DHEC’s Office of Solid Waste Reduction and Recycling (Office), as required by the Act, plays a key role in providing outreach and education programs and projects as well as technical assistance to schools, colleges/universities, businesses, local governments, the public and other stakeholders. The Office, however, is only one stakeholder. Every South Carolinian has the opportunity – and responsibility – to do their part.

### RECOMMENDATIONS

Encourage and assist local governments to offer outreach and education programs to residents on community recycling options and to look for partnerships to promote recycling.

Encourage local governments to adopt the RecycleMoreSC outreach campaign.

Identify opportunities to promote the economic benefits of recycling to local decision makers and appropriate organizations.

Inspire more businesses to reduce waste, recycle, report these activities and use the resources of the S.C. Smart Business Recycling Program.

Increase the number of hotels, motels, restaurants and bars that are reducing their environmental impact through resources from DHEC’s Green Hospitality Program and participation in the Green Hospitality Alliance.

Encourage more teachers and schools to participate in “Action for a Cleaner Tomorrow” trainings and classroom presentations and take advantage of DHEC’s K-12 environmental education resources.

Continue to expand public-private partnerships to set up, promote and maintain recycling in public venues (e.g., airports, state and local parks, welcome centers, athletic fields). Encourage “twinning the bin” by placing a recycling receptacle beside every trash receptacle.

# 13

## Prevent illegal dumping of waste tires and facilitate removal of existing waste tire dumps.

South Carolinians generate an estimated 4.5 million waste tires every year. When managed improperly – dumped or stored illegally – tires can become a health hazard by holding water and attracting mosquitoes as well as creating potential fire hazards and unsightly nuisances.

Unfortunately, many waste tires do not take a direct route to a tire recycler. The state continues to see illegal dumping and is working to identify responsible parties to remove and manage illegally dumped tires. The cleanup of existing piles, however, is not a solution. Preventing

the creation of waste tire piles is critical to the success of any waste tire management program.

When managed properly, tires can be used in construction activities and new products as well as burned for energy recovery. Most waste tires generated in South Carolina are chipped and burned in place of other fuels (e.g., coal). They also are used frequently as a substitute for gravel or other aggregates in septic tank drain fields or other drainage applications. Wire-free tire rubber can be used for higher-value products. Chipped tire rubber, for example, can be used in place of wood chips in playgrounds. Finely ground tire rubber can be formed into running tracks or molded into industrial mats.

The proper management of waste tires continues to be a priority. DHEC has initiated steps to prevent illegal tire dumping and to help ensure the movement of tires to recycling facilities. These initiatives include a revision to Regulation 61-107.3 Solid Waste Management: Waste Tires, which became effective in 2015. The regulation revision clarifies reporting and record keeping, and expands the operational, permitting and registration requirements for haulers, collectors and processors of waste tires. One important change is new financial assurance requirements for certain waste tire haulers. Waste tire haulers that haul tires for compensation by other persons are now required to provide \$10,000 in financial assurance in order to become registered. Financial assurance is not required for persons who haul 15 or fewer tires at any time or for those who haul tires they have generated in the course of their own business.

*When managed properly, tires can be used in construction activities and new products as well as burned for energy recovery.*

DHEC is working with stakeholders to ensure understanding of the provisions of the regulation and provides technical assistance upon request.

### RECOMMENDATIONS

**Improve markets.** Strong markets for waste tires can't happen without end-users that are knowledgeable about opportunities for using recycled tire rubber in manufacturing and engineering applications and can't be sustained without healthy waste tire processors to supply quality product. DHEC and the S.C. Department of Commerce (Recycling Market Development Program) should continue efforts in conjunction with tire manufacturers, tire processors, research institutions and others to promote higher-value uses for waste tires and a climate where the economics of waste tire processing can sustain suppliers of processed tire material.

**Work with the EPA and others to gain understanding of the potential dangers of crumb tire rubber in certain applications** especially playgrounds and sports turfs.

**Minimize the opportunities for illegal tire disposal.** DHEC efforts should include full implementation of the manifesting and registration requirements. Tire generators and retailers must verify their waste tires are hauled only by legally registered haulers and that they are delivered to appropriate facilities. DHEC should work with waste tire generators, haulers, local governments and waste tire processors to ensure that only properly bonded waste tire haulers are used to move tires.

**Engage law enforcement and anti-littering organizations.** DHEC should work with state and local law enforcement and anti-littering organizations to locate illegal tire dumps and waste tire stockpiles, and to identify offenders. DHEC also should work with law enforcement to deter illegal dumping and to ensure offenders are dealt with consistently and with all available force of law and regulation. DHEC should work with anti-littering agencies and non-profits to increase awareness of tire dumping issues, and to promote cooperation between law enforcement and community environmental groups.

**Involve local governments.** DHEC should continue to assist county and municipal governments in implementing waste tire management programs that prevent illegal dumping and encourage the purchase of high-value products made from waste tires. DHEC also should work with local governments to develop programs that expedite the removal of tire dumps and stockpiles. As of the publication date of this report, there have been no confirmed cases of Zika virus in South Carolina; however, mosquitoes also may carry West Nile virus and eastern equine encephalitis. It's important to control the mosquito populations in our communities, and removing waste tire dumps and other sources of standing water helps eliminate mosquito breeding grounds.

## 14 Prevent illegal dumping of other material.

Tires, C&D debris, land-clearing debris and electronics are the materials most frequently dumped illegally.

*Tires, C&D debris, land-clearing debris and electronics are the materials most frequently dumped illegally.*

The most common practice is dumping material in a remote area. Another common problem is when material is collected for recycling and stockpiled with a minimum amount being recycled and the remainder left unmanaged. Both activities result in the creation of illegal dumping that degrades property values and puts human health and the environment at risk. Both activities also result in property owners or taxpayers paying for the cleanup.

The underlying causes of illegal dumping are varied, but generally fall into the following categories:

- **Low Risk** – Haulers that dump tires and land-clearing debris and other material, face a low risk of being identified because the material they dump is difficult to trace to the source. Law enforcement and judicial bodies also may not consider the impact of this dumping on the health, environmental or economic welfare of a community, resulting in low fines and penalties against dumpers.
- **Cost Factors** – The cost of properly recycling or disposing of certain materials creates an incentive for illegal dumping. The average fee to recycle waste tires, for example, is higher in South Carolina than the cost to properly dispose

of MSW in a landfill. In addition, when a recycled material has a low intrinsic value, the costs to process and sell the material may be greater than the revenue received from its sale. Collectors may stockpile material to avoid processing costs.

- **Generator Responsibility** – Waste generators sometimes encourage illegal dumping by choosing the lowest cost option available to dispose of waste, without regard for how their waste is managed.
- **Statutory and Regulatory Exemptions** – The Act provides regulatory exemptions for recycling activities. While this is a positive incentive for legitimate recyclers, some operators use these loopholes to claim they are performing a recycling activity when, in fact, their activities more closely resemble unpermitted landfills.

### RECOMMENDATIONS

**Regulatory agencies, local governments, private sector businesses and residents should work together to prevent illegal dumping.**

**Develop strong markets for recyclable material.** The higher value a material has, the more likely it is to be treated as a commodity and the less likely it is to be dumped illegally.

**Consider statutory and regulatory changes to hold haulers, processors and generators more accountable** for the proper collection, transport, recycling and disposal of solid waste and recyclable material.

**Implement more robust litter control policies and practices** including cooperation between state and local law enforcement agencies and add litter control staff.

### Recycling Market Resources

The Green Resource Index, which is designed to help businesses, industry, local governments and others, is a continuously updated, Web-based directory that includes recyclers by commodity, material substitution providers, recycling service providers and equipment vendors. Visit [www.scdhec.gov/recycle](http://www.scdhec.gov/recycle).

The S.C. Materials Exchange is designed to help businesses, non-profits and other organizations exchange reusable material by providing users access to information on material available or wanted. Visit [www.scdhec.gov/scme](http://www.scdhec.gov/scme).

## 15 Maintain and continue to develop recycling markets.

Recycling markets and market development are an indispensable component of South Carolina's waste management system. Markets use material that otherwise would be disposed of and keeps that material in circulation, creating jobs, conserving resources, reducing the need to build landfills and lessening negative environmental impacts. Recycling only works when there are businesses to buy and reprocess the material that is collected.

South Carolina has several key players focused on market development. The S.C. Department of Commerce's Recycling Market Development

Program and the Recycling Market Development Advisory Council work together to create and grow recycling markets and provide technical assistance as well as track growth, investment and other recycling industry indicators. In addition, the state is a member of the Southeast Recycling Development Council (SERDC). SERDC represents 11 states and works toward coordinating efforts in the region to promote recycling, recycling partnerships and markets through technical assistance and tools.

South Carolina is fortunate to have a robust recycling industry (see Section 4) as well as access to other major companies in the Southeast that need recovered material. These recycling markets, though expanding and widely available for most commodities, continue to be impacted by low regional tipping fees, price fluctuations, competition with virgin material and the economic competition of disposal.

---

*South Carolina is fortunate to have a robust recycling industry as well as access to other major companies in the Southeast that need recovered material.*

---

In summary, while much has been accomplished, much remains to be done such as recovering more and cleaner material in a more efficient way and finding solutions for hard-to-recycle items such as carpet, mattresses and fluorescents.

### RECOMMENDATIONS

**Conduct research to provide more detailed information on the economic impact of recycling** with the S.C. Department of Commerce and the University of South Carolina's Moore School of Business. Work will include determining the benefits of increased recycling of specific commodities and comparing the costs/benefits of disposal, recycling and waste-to-energy.

**Promote the economic impact of recycling to decision makers and the public.**

**Consider incentives to assist in the development of recycling businesses.**

**Consider the implementation of potential programs to stimulate and support markets for specific material.**

**Continue to work to attract commercial composting investment in South Carolina.** While local governments can play an integral role in developing organics recovery infrastructure in the state, it simply will not work without private investment. Provide technical assistance (e.g., mapping food waste generators across the state).

**Encourage the recycling industry to assist stakeholders** (e.g., local governments and businesses) **to improve the quantity and quality of recovered material** through outreach, technical assistance and partnerships.

**Work with national, regional and state stakeholders to find new or improved market-based solutions for commodities** (e.g., tires, plastic, glass, carpet, C&D debris).

**Work with state agencies** (e.g., S.C. Department of Transportation) **to increase the use of recycled-content material** developed by South Carolina companies.

### S.C. Smart Business Recycling and Green Hospitality Programs

These programs help businesses of all sizes reduce waste, recycle and lessen their environmental impact.

Both programs offer free, confidential, non-regulatory services including: best management practices fact sheets and guides; site visits and technical assistance; research and contacts for potential markets, service providers and beneficial reuse; on-demand webinars; and workshops.

To learn more, visit [www.scdhec.gov/smartbusiness](http://www.scdhec.gov/smartbusiness) or [www.scdhec.gov/greenhospitality](http://www.scdhec.gov/greenhospitality).

# The Economics of Managing Solid Waste in South Carolina

## SECTION

# 4

The collection, proper disposal and recycling of solid waste are essential services that have long been recognized as a critical segment of a community's infrastructure.

These services are no simple task. They are multiple and varied and include disposal, recycling, staffing, outreach/education, trucks, fuel, equipment, buildings, land, insurance and managing facilities (e.g., landfills, transfer stations). They must be done in a way to protect human health and the environment. They must be safe and efficient.

These services are also expensive. Local governments spent more than \$323 million to manage solid waste in fiscal year (FY) 2015 (July 1, 2104 to June 30, 2015) and more than \$1.6 billion since FY11 according to the full-cost disclosure information reported to the S.C. Department of Health and Environmental Control.

The economics of solid waste management also play a significant underlying role in recycling services offered. Local government recycling programs compete with the consistent low cost of disposal in South Carolina – tipping fees average \$40 per ton. Recycling, at a minimum, avoids disposal costs and offers the chance to earn revenue from the sale of the material.

Revenue from the sale of recyclables, however, is at best an inconsistent benefit. Recyclables, it must be remembered, are commodities that are subject to the same changes in value as other commodities. Recycling markets are historically very inconsistent and throughout this reporting period trending downwards.

In summary, local governments face a difficult economics balancing act of cost and services. No matter the choice – disposal or recycling – there is a cost. (See the recommendation on ending the myth that recycling is free on page 7.)

## The Economic Impact of Recycling

While local government program choices and costs are discussed and debated, it is accepted that recycling plays a significant role in the nation's and South Carolina's economy. The reason is simple. Material that is disposed of adds no further value. Material that is recycled and reintroduced as a

feedstock into a manufacturing process continues to generate economic activity.

Recycling creates significant economic activity in South Carolina. The state's recycling industry is comprised of more than 520 companies that haul, collect, process and broker material, sell equipment and manufacture recycled-content products. This industry provides more than 22,000 direct jobs, \$2.7 billion in annual labor income and nearly \$330 million in state and local taxes every year according to a 2014 study. Overall, the industry has a \$13 billion annual impact on the state's economy.

## Recycling Investment

The recycling industry continued to grow in 2015 with new companies coming to South Carolina and existing companies expanding their operations. Twelve new or existing companies made \$260 million in capital investments and created more than 550 jobs according to the S.C. Department of Commerce Recycling Market Development Advisory Council.

Since 2011, the industry has invested more than \$1.3 billion and created more than 3,500 jobs. See Table 4.1 for more information.

### Estimated Lost Revenue

It is estimated that 525,543 tons of easily recyclable material – aluminum cans, cardboard, glass bottles and jars, office paper, plastic bottles and steel cans – was disposed of in FY15.\* Using the state's average tipping fee of \$40 per ton, it is projected that local governments spent more than \$21 million to dispose of this material.

It is also estimated that more than \$157 million in potential revenue from the sale of this material was lost based on the average revenue received per ton as reported by local governments of each of these types of material.

\* The estimated amount of material disposed of that could have been recycled is calculated by using the U.S. Environmental Protection Agency's most recent municipal solid waste (MSW) generation rates to South Carolina's FY15 generation.

# The Economic Impact of Recycling in South Carolina\*

The recycling sector provides  
**22,403 jobs**  
to South Carolina's economy.

The recycling sector provides  
**\$329 million**  
in state and local taxes each year.

In South Carolina, there are  
**more than 520**  
recycling-related companies.

The annual average wage of the recycling sector is  
**\$40,203**  
(vs. the national annual average wage of \$38,700).

In 2014, the state's recycling industry doubled its annual total economic impact to  
**\$13 billion**  
(from \$6.5 billion in 2006).

South Carolina saw a  
**44% increase**  
in recycling employment from 2006 to 2014 (a 4.7 percent annual growth rate).

\* SOURCE: "The Economic Impact of the Recycling Industry in South Carolina," Dr. Frank Hefner, College of Charleston Department of Economics and Finance. The study, which was released in April 2014, is a follow-up to the 2006 study. The annual figures reflect 2013 data.

The state's recycling industry provides a total of  
**\$2.7 billion**  
in labor income generated annually.

**TABLE 4.1: Recycling Investments in South Carolina**

YEAR	CAPITAL	NEW JOBS	BUSINESSES
2011	\$333,000,000	837	15
2012	\$463,000,000	771	19
2013	\$104,000,000	765	10
2014	\$156,000,000	586	9
2015	\$260,000,000	565	12
<b>TOTAL</b>	<b>\$1,315,000,000</b>	<b>3,524</b>	<b>65</b>

# Recycling by Commodity

## SECTION

# 5

The S.C. Solid Waste Policy and Management Act of 1991 – S.C. Code of Laws § 44-96-60 – requires the S.C. Department of Health and Environmental Control (DHEC) to report the amount of municipal solid waste (MSW) recycled by commodity and county. This information is gathered from counties – which are required to provide this data to DHEC (Section 46-96-80) – and from voluntary reporting by businesses and municipalities.

This section highlights the commodities that comprise MSW as defined by South Carolina – glass, metal, paper, plastic, organics, banned items, miscellaneous items and commingled recyclables.

Glass, metal, paper and plastic are considered traditional commodities and serve as the foundation of local government recycling programs.

Appliances, electronics (i.e., computers, monitors, printers, televisions), lead-acid batteries, used motor oil and whole waste tires are banned by law from any type of landfill disposal. Yard trimmings are banned from disposal in Class 3 landfills. The majority of yard

trimmings, however, are disposed of in Class 2 landfills. See Table 9.1 on page 83 for a breakdown of landfill classifications.

Miscellaneous recyclables include antifreeze, cooking oil, fluorescent bulbs, hazardous household material (HHM), inkjet/toner cartridges, mattresses, paint, rechargeable batteries, textiles, used motor oil filters and wood packaging. Levels of collection differ in local government programs.

HHM is reported as a miscellaneous item and highlighted in this report because it poses a potential risk to human health and the environment. For information on local government HHM programs, see Table 5.19.

Commingled recyclables consist of a variety of material collected together and not reported by individual material type.

Overall, paper was the top commodity recovered – comprising 28 percent of the MSW recycled in FY15. Metal, paper and organics combined to make up nearly 68 percent of the MSW recycled. See Chart 5.1 and Table 5.2 for a breakdown of commodities recycled by percent and amount for FY15. For a breakdown of the amount of each commodity recycled since FY11, see page 28.

**CHART 5.1: MSW Commodities Recycled as a Percentage of All MSW Recycled in FY15\***

\*NOTES: Commodities are measured by weight. Percentages do not round up to 100 percent due to rounding.

**TABLE 5.2: MSW Commodities Recycled in Tons for FY15**

COMMODITY	AMOUNT
Banned	92,566.37
Commingled	168,573.82
Glass	6,288.69
Metal	236,137.27
Miscellaneous	70,943.61
Organics	203,571.24
Paper	305,797.77
Plastic	17,311.26

# Used Motor Oil Recycling

## SECTION

The S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws § 44-96-160 – requires the S.C. Department of Health and Environmental Control (DHEC) to publish an annual report on the state’s used motor oil recycling program for do-it-yourself oil changers (DIYers). According to the Act, the report must include:

- **The amount of used motor oil collected in each county;**
- **The number of used motor oil collection sites available in each county; and**
- **A summary of local government programs receiving grant funding from DHEC.**

The Act requires transporters of used motor oil to register and report to DHEC the amount hauled each calendar year. For purposes of this report, however, the amount of used motor oil collected is presented by fiscal year (FY) – July 1 to June 30 – as reported by counties.

In South Carolina, only used motor oil recycled by DIYers is counted as part of the state’s municipal solid waste recycling rate. In FY15, DIYers recycled 711,411 gallons (or about 2,490 tons) of used motor oil – a decrease of nearly 25 percent from the previous FY. Overall, there were 891 collection sites provided by local governments, retailers, quick lubes and auto parts stores.

Chart 6.1 illustrates the success of the used motor oil collection program by FY. Table 6.2 lists the number of sites and gallons collected by county as well as grant awards to the county or municipalities within that county.

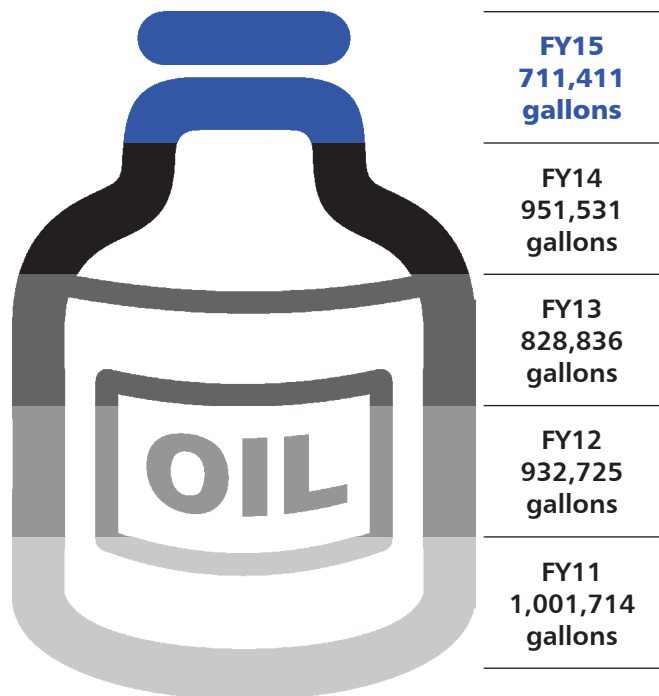

There is a fee of 2 cents per quart of motor oil collected at the wholesale level. Part of this funding is used to provide grants for local governments focusing on DIY used motor oil collection and recycling. In FY15, \$706,766 was awarded to local government programs and primarily used for the purchase of equipment and supplies associated with used motor oil collection sites. Funds also were used to cover costs for used motor oil filter recycling, public education and professional development of local government recycling coordinators and others.

In addition to used motor oil, most county and some municipal recycling programs also collect used motor oil filters and bottles from DIYers.

The amount of used motor oil filters and motor oil bottles recycled is difficult to determine or is not always available. For example, many counties collect and market filters with other metals. Given that, the data presented in Section 5 (Table 5.7) does not reflect the full extent of used motor oil filter recycling in the state. Likewise, motor oil bottles (if properly drained) are collected and mixed with other plastic bottles – further hindering an accurate measurement.

Overall, there are few barriers to recycling used motor oil, used motor oil filters and motor oil bottles. Markets are not an issue. Used motor oil typically is collected and burned for energy recovery. Also, scrap dealers and steel mills accept drained/crushed used oil filters. In addition, because of the recent drop in oil prices, local governments are not compensated as well for their collected used oil.

**CHART 6.1: Gallons of Used Motor Oil Recycled by S.C. DIYers by FY**

**TABLE 6.2: Number of DIY Used Motor Oil Collection Sites, FY15 Grants Awarded, Gallons Collected and Tonnage Equivalent by County for FY15**

<b>TOTAL</b>	<b>891</b>	<b>711,411.00</b>	<b>2,489.94</b>	<b>\$706,766.00</b>

1. The Three Rivers Solid Waste Authority (SWA) provides solid waste management services to local governments in Aiken, Allendale, Bamberg, Barnwell, Calhoun, Edgefield, McCormick, Orangeburg and Saluda counties.

2. The Tri-County SWA provides solid waste management services to local governments in Edgefield, McCormick and Saluda counties.

◆ Grant funding awarded to municipalities and regional authorities primarily is used to promote used motor oil recycling. Collection sites operated and/or used motor oil collected by a municipality are included in the county's total.

**NOTES:** The majority of sites listed above are provided by local governments, but the total number (891) includes retailers, quick lubes and auto parts stores. Gallons are converted to weight (1 gallon = 7 pounds).

# Recycling: State Agencies & Colleges/Universities

## SECTION

# 7

The S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws § 44-96-140 – requires state agencies and state-supported colleges/universities to:

- **Establish recycling programs for the collection of selected material** including, but not limited to, aluminum, cardboard, glass, lead-acid batteries, paper, plastic, tires and used motor oil;
- **Make necessary modifications to their programs to ensure material is recycled to the maximum extent possible;** and
- **Report the type and amount of material recycled as well as information on the purchase of recycled-content products** by September 15 of each year to the S.C. Department of Health and Environmental Control (DHEC).

DHEC is required to submit a report on this information to the governor and General Assembly by November 1 of each year.

This section is a condensed version of the report and reflects recycling and buying recycled activities for fiscal year (FY) 2015 (July 1, 2014 to June 30, 2015). To view the full report, visit [www.scdhec.gov/recycle](http://www.scdhec.gov/recycle) and select “Data and Reports.”

Data regarding the amount of material recycled was received either directly from the state agency or college/university that completed the survey provided

by DHEC or from vendors providing recycling services. Both public and private colleges/universities are included in this report although only state-supported colleges/universities are required by the Act to provide information.

In FY15, state agencies and colleges/universities recycled more than 23,627 tons of material – an increase of about 19 percent from the 19,771 tons recycled in FY14. This data was compiled from the information reported by 74 state agencies and 39 colleges/universities.

Overall, state agencies reported recycling 9,302 tons of material in FY15 – about a 5 percent decrease from the 9,790 tons recycled the previous FY. Paper was the most recycled commodity followed by construction and demolition (C&D) debris.

Colleges/universities reported recycling about 14,325 tons of material – a 43 percent increase from the 9,980 tons recycled the previous FY. C&D debris was the most recycled commodity followed by paper. In FY15, colleges/universities recycled more than 3,800 tons of C&D debris – an increase of 335 percent from the previous FY.

The percentage of state purchases that contain recycled material cannot be determined because no statewide system to track those purchases exists. The recycled-content products purchased most frequently by state agencies and colleges/universities were office paper and inkjet/toner cartridges.

## Clemson is national champion of KAB's GameDay Recycling Challenge

Clemson University is No. 1 in recycling. The Tigers topped more than 90 colleges/universities to win Keep America Beautiful's (KAB) 2014 GameDay Recycling Challenge by collecting 60,274 pounds of recyclables during their home football game against the University of South Carolina.

The winning effort included placing recycling bins and bag dispensers within the three-square mile tailgating area and providing more than 2,000 recycling bags to tailgaters.

KAB recognized Clemson for its winning efforts in February 2015 at a Tigers' basketball game. In addition to the total recycling category, Clemson also finished 14th nationally in the waste diversion competition with a 63.4 percent diversion rate. Other South Carolina rankings in this category included: Coastal Carolina at No. 19 with a 53.5 percent diversion rate, The Citadel at No. 20 (51.3 percent) and the University of South Carolina at No. 32 (34.6 percent).

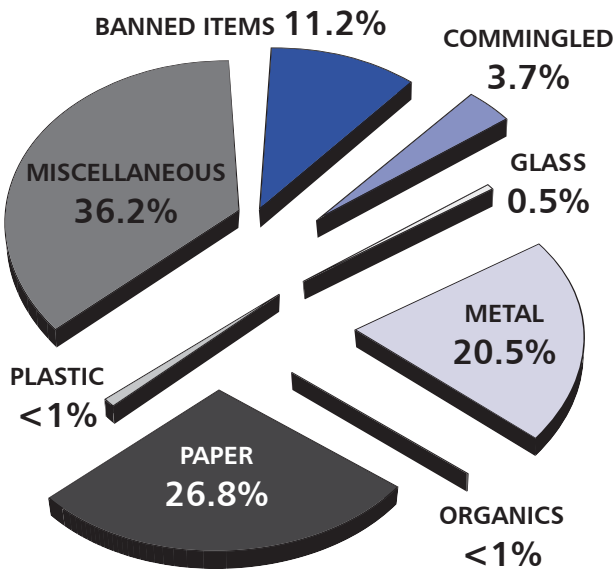

## Recycling by State Agencies

Overall, state agencies reported recycling 9,302 tons of material – a decrease of about 5 percent from FY14. Compared to the previous FY, more material was recycled single-stream, explaining a decrease in paper and plastic. In addition, more metal and glass were recycled than in FY14. The largest contribution to the decrease in recycling was wood, C&D debris and organics.

Seventy-four state agencies reported recycling and buying recycled data for FY15 with 24 agencies reporting an increase in their total recycling compared with FY14.

For a complete list of state agencies reporting for FY15, see the last page of this section.

**CHART 7.1: Percentage of Recyclables Collected by State Agencies**

**NOTE:** Percentages do not add up to 100 percent due to rounding of numbers.

*The Green Government Initiative assists state agencies in meeting the requirements of the S.C. Solid Waste Policy and Management Act of 1991 and helps South Carolina meet its goal of recycling 40 percent of its waste by 2020. The goal of this program is to encourage state agencies to lead by example to reduce their environmental footprint and increase the state's impact on recycling markets.*

**TABLE 7.2: Commodities Recycled in Tons by State Agencies**

COMMODITIES RECYCLED		AMOUNT
<b>Banned Items</b>	Appliances	22.90

	<b>TOTAL MISCELLANEOUS ITEMS</b>	
<b>TOTAL FOR ALL</b>		<b>9,302.90</b>

**NOTE:** C&D debris is not included in the state's MSW recycling rate.

## Recycling by Colleges/Universities

Overall, colleges and universities reported recycling 14,325 tons of material – an increase of about 43 percent from the previous fiscal year. Compared to the past fiscal year, single stream recycling more than doubled – explaining a decrease in paper, plastic and metal. In addition, glass, wood and banned items also increased. The largest contributions to the increase were C&D debris and organics.

Thirty-nine colleges and universities reported recycling and buying recycled data for FY15 with eighteen colleges/universities reporting an increase in their total recycling compared to FY14.

For a complete list of colleges and universities reporting for FY15, see the last page of this section.

# Recycling: The State & Counties at a Glance

## SECTION

The S.C. Solid Waste Policy and Management Act of 1991 – S.C. Code of Laws § 44-96-80 – requires counties or regions to annually report municipal solid waste (MSW) recycling data by commodity and amount to the S.C. Department of Health and Environmental Control. The commodities reported are: glass; metal; paper; plastic; organics; banned items; miscellaneous items; and commingled recyclables.

Recycling data also was collected from other sources including waste tire processors, electronics recycling vendors, used motor oil collectors, state agencies and colleges/universities as well as businesses and industries. This data was attributed to counties based on population or source. Once collected, the data is placed into one of three categories based on the source of the material: residential; commercial/institutional; and industrial (office/packaging). See Section 1 for types and examples of material from each of these sources.

Businesses and industries are not required to report their recycling activities. Unfortunately, the voluntary reporting by these sources is inconsistent and harms the state’s ability to accurately measure its recycling efforts.

South Carolina’s MSW recycling rate decreased to 26.5 percent in fiscal year (FY) 2015 (July 1, 2014 to June 30, 2015) from 29.2 percent in FY14. In South Carolina, only MSW is used to measure the state’s recycling efforts. (See the definition on page 2.) Overall, the amount of MSW recycled decreased nearly 13 percent from 1,263,495 tons in FY14 to 1,101,190 tons in FY15. For total MSW and residential recycling tonnages since FY11, see Table 8.3.

The state’s goal is to recycle at least 40 percent of its MSW and reduce MSW disposal to 3.25 pounds (or less) per person per day (p/p/d) by 2020. In FY15, only one county – Beaufort – had a recycling rate greater than 40 percent. Twenty-seven counties met the waste reduction goal of 3.25 p/p/d or less. (See Table 8.1.) For a county-by-county comparison of MSW recycling and disposal data, see Table 9.11 on page 93.

**TABLE 8.1: S.C. Counties Meeting the Disposal Goal of 3.25 P/P/D or Less in FY15**

COUNTY	DISPOSAL RATE	COUNTY	DISPOSAL RATE
Abbeville	2.60	Jasper	2.54
Aiken	2.60	Kershaw	2.78

# Disposal

## SECTION

# 9

The S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws §§ 44-96-10 et seq. – and subsequent regulation (R.61-107.19) require permitted private and public solid waste landfills to report the amount and type of solid waste disposed of annually to the S.C. Department of Health and Environmental Control (DHEC).

This section focuses on disposal of both municipal solid waste (MSW) and total solid waste (TSW) as defined on page 2. As required by the Act, the focus of this report is on MSW.

In fiscal year (FY) 2015 (July 1, 2014 to June 30, 2015) there were 378 solid waste facilities operating under the authority of 15 types of permits in South Carolina. (See Section 10 for a complete list of facilities.) Of that total number of facilities, 157 were landfills. There are three landfill classifications – each of which accepts specific material. See Table 9.1.

### Key Disposal Indicators from FY15

The amount of material disposed of in Class 1 landfills decreased 24 percent (21,909 tons) in FY15 – dropping to 68,206 tons. This is mostly due to a decrease in storm debris and the number of Class 1 landfills in operation. See Table 9.13 for Class 1 FY15 disposal totals by county. The amount of C&D debris and certain industrial waste disposed of in Class 2 landfills increased about 0.4 percent\* (11,833 tons\*) to 3,067,388 tons\* in FY15. See Table 9.14 for a list of Class 2 landfills including permitted annual disposal, FY15 disposal and estimated remaining life.

Of the 27 Class 3 landfills, 11 are publicly owned and 16 are privately owned. (See the map on page 86.) The privately owned landfills include seven industrial landfills (i.e., non-commercial). See Table

9.7 for a complete list of Class 3 landfills including permitted annual rate of disposal, FY15 disposal and estimated remaining life.

South Carolinians disposed of 3,058,388 tons of MSW in FY15 – a decrease of 0.3 percent (almost 10,000 tons) from the previous FY. On average, each South Carolinian disposed of about 3.5 pounds of MSW per day – the same as the previous FY.

TSW disposal in Class 3 landfills increased about 315,000 tons in FY15 to about 5.6 million tons. Of that amount, the majority (3.8 million tons or 69 percent) was disposed of in the 16 privately owned Class 3 landfills. The remainder (1.8 million tons or 31 percent) was disposed of in the state's 11 publicly owned Class 3 landfills.

Lee County Landfill, Oakridge Landfill, Richland Landfill and Upstate Regional Landfill accepted 51 percent (about 2.9 million tons) of the TSW disposed of in Class 3 landfills. Of those four landfills, Richland Landfill accepted 17 percent (more than 954,000 tons). See Tables 9.7 through 9.10 for an overview of disposal data.

**TABLE 9.1: S.C. Landfill Classifications**

TYPE	NUMBER OF FACILITIES IN FY15	MATERIAL ACCEPTED
Class 1	40	Land-clearing debris
Class 2	90	Construction and demolition (C&D) debris
Class 3	27	MSW, C&D debris and industrial solid waste

**TABLE 9.2: S.C. Waste Disposed of by FY**

	FY11	FY12	FY13	FY14	FY15
MSW Disposed of in Tons	3,065,806	2,935,876	2,985,852	3,067,942	3,058,338
MSW Disposed of in p/p/d	3.6	3.4	3.5	3.5	3.5
TSW Disposed of in Tons	7,824,312	7,696,559	7,906,522	7,918,780	8,317,621*
TSW Disposed of in p/p/d	9.3	9.0	9.2	9.1	9.4*

\*Rev. April 2016

## Import and Export of Solid Waste

The amount of out-of-state solid waste disposed of in South Carolina in FY15 was 655,768 tons – a decrease of 5 percent from the previous FY. (See Chart 9.4 below.) Overall, this represents about 7

**CHART 9.3: Percentage of All Solid Waste Imported into South Carolina by State in FY15**

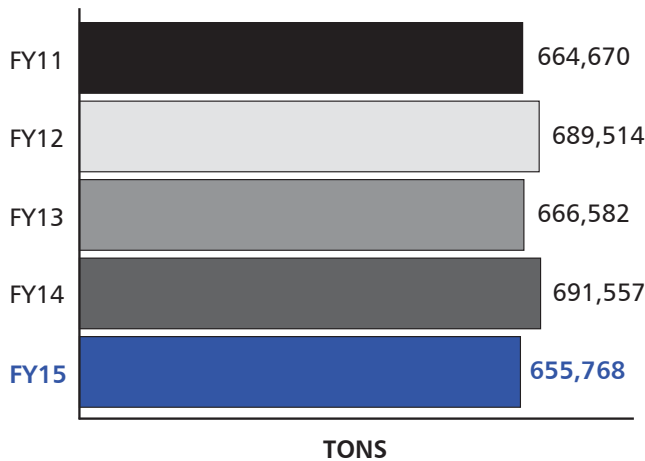

percent of the total amount of solid waste disposed of in the state.

In FY15, the vast majority of out-of-state solid waste was disposed of in four Class 3 landfills – Lee County Landfill, Palmetto Landfill, Richland Landfill and Upstate Regional Landfill. (See Table 9.6.) Most of the solid waste imported into the state during FY15 was from North Carolina and New York. Those two states combined for 84 percent (more than 551,000 tons) of the total amount of solid waste imported to South Carolina. (See Chart 9.3 and Table 9.6.)

Also see Table 9.6 for amounts of out-of-state waste imported into the state through processing facilities. By attributing this waste to the state of origin rather than the processing facility's county, a more accurate representation of out-of-state waste disposed of in South Carolina landfills is provided. More than 8,000 tons of waste imported to processing facilities was disposed of in the Oakridge Landfill, Richland Landfill and Twin Chimneys Landfill.

**CHART 9.4: Solid Waste Imported into South Carolina**

**CHART 9.5: Solid Waste Exported from South Carolina**

South Carolina exported 200,164 tons of solid waste in FY15 – an increase of 23 percent from the previous FY (163,089 tons). This number can vary by year depending on the number of out-of-state landfills that report.

Fifteen counties (Allendale, Anderson, Chester, Chesterfield, Darlington, Florence, Greenville, Greenwood, Kershaw, Lancaster, Marlboro, Oconee, Pickens, Spartanburg and York) accounted for all of the exported waste, which was sent to Georgia and North Carolina landfills. (See Chart 9.5.)

**TIPPING FEES** – the amount charged to dispose of solid waste at a landfill – were taken from landfill reports submitted to DHEC.

While tipping fee data is incomplete (only a portion of the facilities reported tipping fees), the average Class 3 Landfill tipping fee was \$40 per ton in FY15, up \$2 from the previous FY.

In addition, the average tipping fee for Class 2 disposal was \$27 in FY15 the same as the previous FY.

The average tipping fee for Class 1 disposal was \$17 up \$2 from the previous FY.

1. Solid Waste Authority
2. Miscellaneous represents solid waste imported from Georgia (51,415 tons) and North Carolina (20,495 tons) and disposed of in Class 1 and Class 2 landfills or through incineration. Of the solid waste imported from Georgia, 177 tons of land-clearing debris were disposed of through incineration.
3. Miscellaneous from Processing Facilities represents solid waste that went through processing facilities from Alabama (355), Arkansas (3), Arizona (626), District of Columbia (13), Delaware (17), Florida (687), Indiana (23), Iowa (40), Kansas (90), Kentucky (4), Louisiana (440), Massachusetts (22), Maryland (336), Michigan (43), Mississippi (13), New Jersey (38), Ohio (56), Pennsylvania (144), Rhode Island (30), Tennessee (750), Texas (135), Virginia (2,126), Wisconsin (43) and West Virginia (372) and disposed of in Class 3 landfills.

**NOTE:** Some totals may not add up due to rounding.

# South Carolina's Class 3 Landfills in FY15

## COMMERCIAL, PUBLICLY OWNED LANDFILLS

- 1 Abbeville County Landfill
- 2 Bees Ferry Landfill
- 3 Berkeley County Landfill
- 4 Georgetown County Landfill
- 5 Greenwood County Landfill
- 6 Horry County SWA Landfill
- 7 Three Rivers SWA Landfill
- 8 Twin Chimneys Landfill

## NON-COMMERCIAL, PUBLICLY OWNED LANDFILLS

- 10 Santee Cooper – Cross
- 11 Savannah River Site Z-Area Landfill

## COMMERCIAL, PRIVATELY OWNED LANDFILLS

- 12 Anderson Regional Landfill
- 13 Hickory Hill Landfill
- 14 Lee County Landfill LLC
- 15 Northeast Landfill LLC
- 16 Oakridge Landfill
- 17 Palmetto Landfill
- 18 Pepperhill Landfill
- 19 Richland Landfill
- 20 Upstate Regional Landfill

## NON-COMMERCIAL, PRIVATELY OWNED LANDFILLS<sup>1</sup>

- 21 Albemarle Corp. Landfill
- 22 CMC Landfill 1601
- 23 CMC Landfill 1602
- 24 SCE&G – Cope
- 25 SCE&G – Wateree Landfill
- 26 SCE&G – Williams Hwy. 52 Landfill
- 27 Sonoco Products

1. Non-commercial landfills are defined by regulation as facilities that only manage the solid waste generated in the course of normal operations on property under the same ownership or control as the facility itself (i.e., "on site"). For more information, see Section 10.

# Permitted Solid Waste Facilities

The S.C. Solid Waste Policy and Management Act of 1991 – S.C. Code of Laws § 44-96-60 – requires the S.C. Department of Health and Environmental Control to provide an inventory of solid waste facilities.

In fiscal year (FY) 2015 (July 1, 2014 to June 30, 2015), there were 378 solid waste facilities operating under the authority of 15 types of permits in South Carolina.

Some permits apply to multiple facility types. For example, there are six types of solid waste processing facilities as well as three types of landfills and transfer stations. Of the 15 types of solid waste permits, only three are allowed to accept MSW – Class 3 landfills, Class 3 transfer stations and Class 3 processing facilities.

**TABLE 10.1: Permitted Rate Legend**

Overall in FY15, there were:

- 157 landfills;
- 108 composting and wood-grinding facilities;
- 41 transfer stations;
- 20 processing facilities;
- 16 waste tire facilities;
- 16 used oil facilities;
- 10 land-application facilities;
- Five research, development and demonstration facilities;
- Four incinerators (all Air Curtain); and
- One soil treatment facility.

Tables 10.2 to 10.9 provide a complete list of the permitted facilities at the close of FY15. The tables include (when available): the facility name; county in which the facility is located; permitted rate of disposal or storage; and the tons received.

# Solid Waste Planning

The S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws § 44-96-60 – requires the S.C. Department of Health and Environmental Control (DHEC) to develop a state solid waste management plan (State Plan).

The Act (Section 44-96-80) also requires county governments or regions to develop plans that are consistent with the State Plan. This section outlines the planning and other responsibilities of state and county governments.

The State Plan is required to address a 20-year planning period and include:

- **An inventory of the amount and type of solid waste currently being disposed of;**
- **Solid waste disposal projections;**
- **An analysis of the types of facilities that will be needed to manage solid waste;**

## SECTION

- **An estimate of the current capacity in the state to manage solid waste;**
- **An evaluation of current solid waste management practices;**
- **Recommendations on how the state can meet its waste reduction and recycling goals; and**
- **A description of public education programs developed in partnership with local governments, businesses, industry and other organizations to – among other objectives – promote waste reduction and recycling.**

The State Plan was adopted in 1992 and revised in 1999. In 2006, a revision established limits for facilities that use emerging technologies.

This annual report is an update to the State Plan as required by the Act.

## Local Planning Responsibilities

### COUNTY/REGIONAL SOLID WASTE MANAGEMENT PLANS

As outlined above, each county is required to have a comprehensive solid waste management plan to ensure adequate disposal capacity. Counties may create and implement regional solid waste management plans.

These local plans – which also are required to address a 20-year planning period – must be consistent with the State Plan and include:

- **The amount and type of solid waste projected to be disposed of within the county or region;**
- **An estimate of the current capacity within that county or region to manage its solid waste;**
- **An analysis of existing and new facilities that will be needed to manage the solid waste generated;**
- **A description of the recycling program** including material collected, type of public education/outreach initiatives offered to promote the program and the designation of a recycling coordinator;

- **An outline of how the county or region expects to meet the state’s recycling and disposal goals; and**
- **An estimate of the cost of implementing the plan.**

DHEC considers local plans when making consistency determinations for solid waste facilities. Because the local government is responsible for providing management of all solid waste, the local plan should address all solid waste streams, applicable facility types and methods of treatment.

DHEC encourages counties and regions to:

- **Review their solid waste management plan periodically** to assess the impact of regulatory changes, new permits, population changes and waste generation trends and update their plan as needed;
- **Provide opportunities for cities, towns, the public and other affected parties within the county or region to have input in the plan revisions; and**
- **Consult the most recent copy of the “South Carolina Solid Waste Management Annual Report”** for updated solid waste data.

# State Planning Responsibilities

Beyond the State Plan, DHEC has additional responsibilities including:

- **Determining consistency with state and local or regional solid waste management plans;**
- **Determining consistency with local zoning and other local land-use ordinances;** and
- **Approving Demonstration of Need (DON) for certain solid waste management facilities.**

## CONSISTENCY DETERMINATIONS

Before a solid waste management facility can be permitted, it must be determined to be consistent with the State Plan, the local county or regional solid waste management plan as well as local zoning and land-use requirements.

Although a county or region is responsible for developing the local solid waste management plan, zoning ordinances and/or other land-use ordinances, DHEC is responsible for making an independent consistency determination.

### Non-commercial Facilities

In South Carolina, a facility is defined as “non-commercial” if it manages only the solid waste generated in the course of normal operations on property under the same ownership or control as the facility itself (i.e., “on site”). Non-commercial facilities are not required to demonstrate need.

DHEC looks at many factors when reviewing the county/regional plan and making its consistency decision. Chiefly, DHEC considers the amount of waste that the county or region is projected to generate during the 20-year planning period and reviews the county or region’s proposed means of managing that waste through a combination of transfer, disposal, incineration and/or recycling.

## DEMONSTRATION OF NEED (DON)

DON refers to the criteria established for the geographical placement and allowable annual disposal rate of new and expanding solid waste management facilities. The original DON regulation was put into effect in June 2000. On June 26, 2009, a revision to Regulation 61-107.17 SWM: Demonstration-of-Need became effective.

The DON regulation addresses commercial Class 3 landfills, commercial Class 2 landfills, commercial solid waste incinerators that incinerate waste other than wood waste or yard trimmings and commercial solid waste processing facilities that process waste destined for disposal at Class 3 landfills. The DON regulation stipulates that where there are at least two commercial solid waste management facilities of the same type within a specified planning area, no new facility is allowed.

## CLASS 2 LANDFILLS

Class 2 landfills accept land-clearing debris, certain construction and demolition debris, certain household furniture and under certain conditions, animal carcasses. Class 2 landfills have a 20-mile

**TABLE 11.1: DON Requirements for New Solid Waste Management (SWM) Facilities**

COMMERCIAL SWM FACILITY	PLANNING AREA AROUND FACILITY	NUMBER OF FACILITIES ALLOWED WITHIN PLANNING AREA	THROUGHPUT/ANNUAL TONNAGE CALCULATION FOR NEW FACILITIES
Class 2 Landfills	20 miles	2	100 percent of host county tonnage plus 30 percent of generation from other counties in planning area
Class 3 Landfills	75 miles	2	Total of 100 percent of host county tonnage and 50 percent of tonnage of counties in planning area without a Class 3 landfill; cannot exceed 30 percent of total state generation
Solid Waste Incinerators	75 miles	2	Based on the manufacturer’s design of the incinerator not to exceed 600 tons per day
Solid Waste Processing Facilities	75 miles	2	Total of 100 percent of host county tonnage and 50 percent of tonnage of other counties in planning area

planning radius. (See Pages 110-111 for a map detailing Class 2 landfill locations and planning radii.)

DHEC calculates allowable annual disposal at new Class 2 landfills using:

- **100 percent of the host county generation;** and
- **30 percent of the generation in other counties within the planning area.**

Tonnage increases for existing Class 2 facilities are allowed only if the facility is operating within 20 percent of its permitted amount, (i.e., the amount of waste disposed per year is 80 percent or more of the annual permitted capacity).

If a Class 2 landfill qualifies for an increase, it can receive the lesser of the amount that disposal in the planning area has increased since the facility last received a permitted increase or 50,000 tons.

Class 2 landfills operating on the effective date of the regulation are allowed variances from certain DON requirements with respect to replacement facilities, tonnage increases and expansions.

See Table 11.2 for Class 2 waste generated for disposal by county for use in DON.

### CLASS 3 LANDFILLS

Class 3 landfills accept municipal solid waste (MSW), industrial solid waste, sewage sludge, non-hazardous MSW incinerator ash and other non-hazardous waste. For new commercial Class 3 landfills, allowable tonnage is calculated using:

- **100 percent of the host county generation;** and
- **50 percent of the waste generated in other counties within the planning area.** (None is counted from other counties that have an existing Class 3 landfill.)

Class 3 landfills have a 75-mile planning radius. (See Pages 112 and 113 for a map detailing Class 3 landfill locations and planning radii.)

The yearly disposal rate at an existing landfill is allowed to increase only if the facility is within 20 percent of its permitted disposal rate (i.e., the amount of waste disposed of per year is 80 percent or more of the annual permitted capacity). If a Class 3 landfill qualifies for an increase, it can receive the lesser of the amount that disposal in South Carolina has increased since the facility last received a permitted increase or 150,000 tons.

In addition, the allowable yearly disposal rate at any Class 3 landfill cannot exceed 30 percent of the total solid waste generated in South Carolina that is destined for disposal in Class 3 landfills. Class 3 landfills operating on the effective date of the regulation are allowed variances from certain DON requirements. See Table 11.3 for Class 3 waste generated for disposal by county for use in DON.

### SOLID WASTE INCINERATORS

The yearly throughput for a solid waste incinerator is based on the manufacturer's design of the incinerator, but it cannot exceed 600 tons per day. The DON regulation does not apply to air curtain incinerators that receive only wood waste and yard trimmings. The planning area for a solid waste incinerator is 75 miles. There are no permitted MSW incinerators in the state.

### SOLID WASTE PROCESSING FACILITIES

The maximum allowable yearly throughput of a solid waste processing facility that processes waste destined for disposal at a Class 3 landfill is equal to:

- **100 percent of the solid waste destined for disposal that is generated in the host county;** and
- **50 percent of the waste generated in each county other than the host county,** that falls wholly or partially within the 75-mile planning radius.

See Pages 114-115 for a map detailing Class 3 Solid Waste Processing Facility locations and planning radii.

NOTE: This data is used for calculating annual tonnage limits as related to R.61-107.17 – effective June 26, 2009. The historical data reported has been adjusted to reflect changes in the DON regulation.

\*This amount does not include 128 tons exported to Georgia that is not listed by county.

# Demonstration of Need Map

## Class 2 Landfills

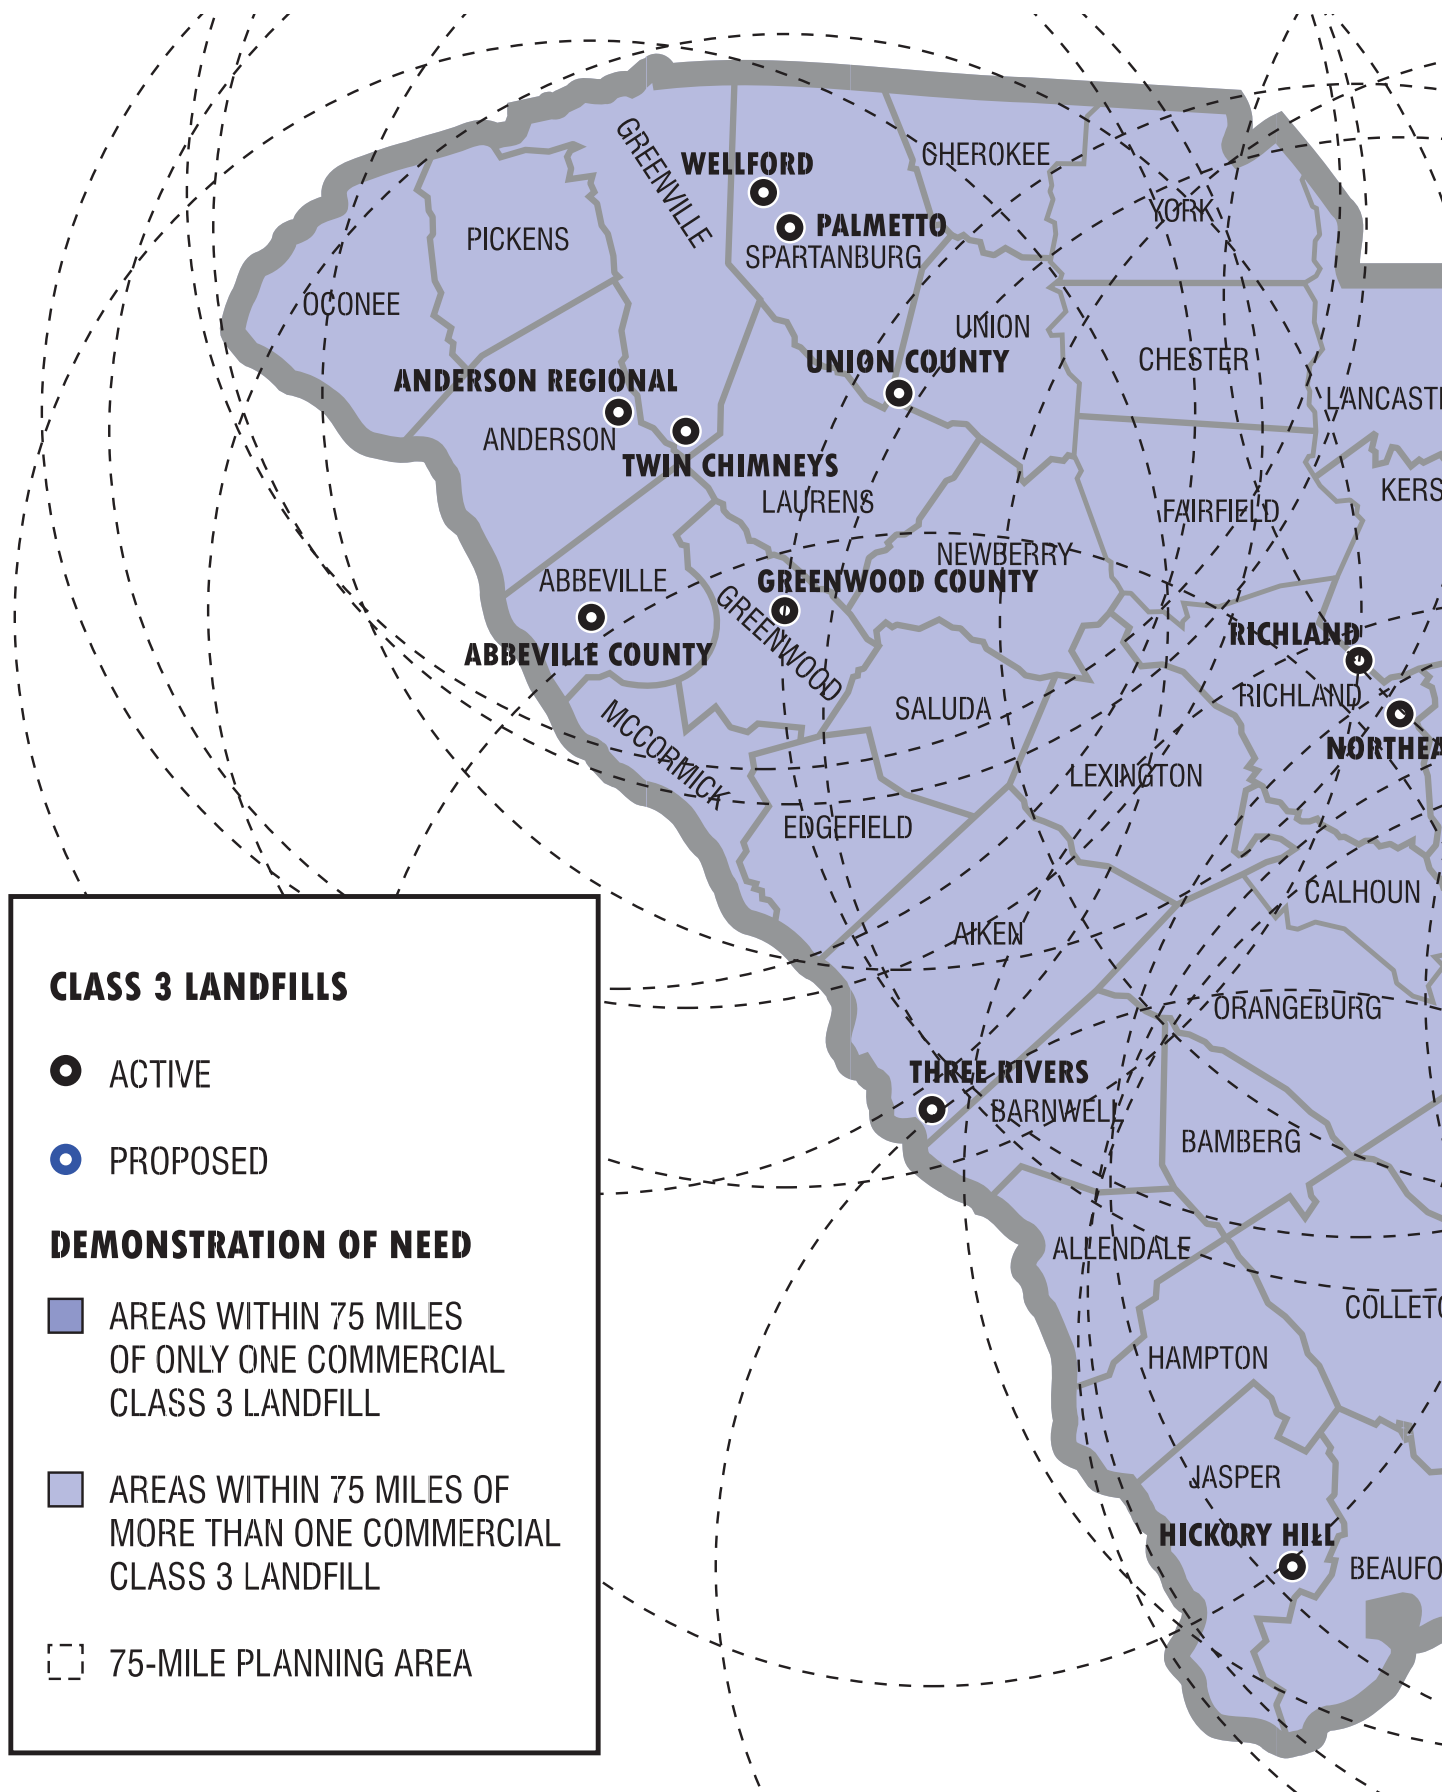

As of June 30, 2015

### CLASS 2

- Limits waste streams as specified in Regulation 61-107.19 SWM: Solid Waste Landfills and Structural Fill
- Waste that is characterized as less than 10 times the maximum contaminant level (MCL) and approved by DHEC may be added to the permit for acceptance/disposal
- **Operational Criteria:**
  - Unauthorized waste may be stored at the facility for 30 days; except that putrescible waste must be removed within 72 hours
  - An annual survey to determine landfill capacity used and the remaining permitted capacity may be required on a case-by-case basis
  - Require scales – but exempts scales for facilities permitted for less than 10,000 tons per year and on-site landfills
- **Design Criteria:**
  - Require settlement calculations on the bottom elevation
  - Require DHEC to inspect the landfill prior to waste placement
  - Set cap requirements at 2 feet of soil
  - Establish certain buffers when “Notice of Intent to File a Permit Application” is published
  - Require groundwater monitoring and corrective action
  - Set post-closure (20 years)
  - Require closure and post-closure financial assurance

# Demonstration of Need Map

## Class 3 Landfills

As of June 30, 2015

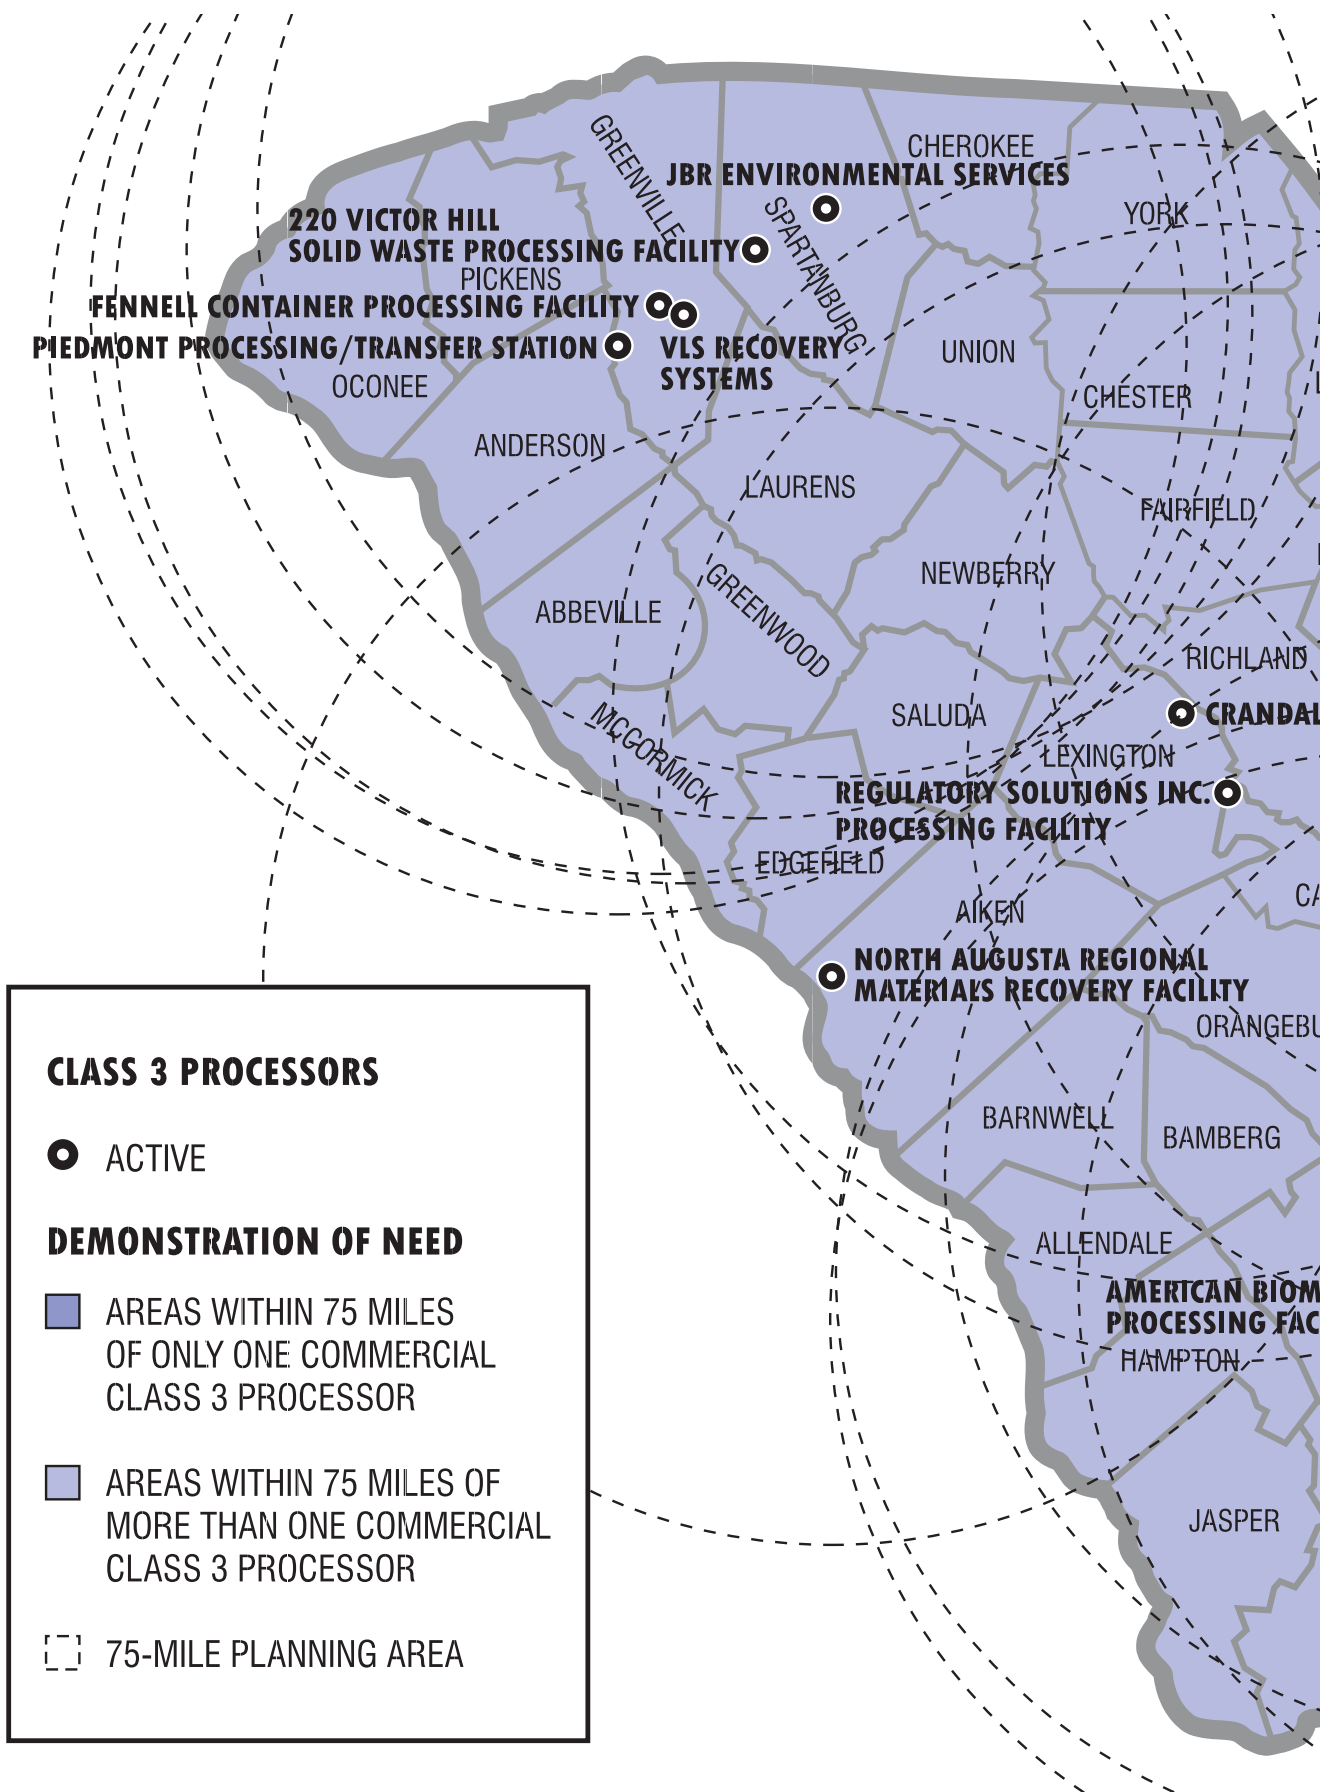

### CLASS 3

- Requires waste characterization through the Special Waste Analysis and Implementation Plan
- Requirement to inspect 10 percent of incoming loads
- Landfills that were permitted as Industrial Solid Waste Landfills prior to the effective date of this regulation are exempt from design criteria provided the waste streams remain below 30 times the MCLs
- Leachate recirculation allowed under permit modification
- Buffers established when "Notice of Intent to File a Permit Application" is published
- Notification required within 72 hours of receipt of hazardous or PCB wastes
- Monofills that accept coal combustion by-products testing less than 10 times MCL can be constructed with a clay liner system
- Slope-stability requirements
- Certification testing of cap to include:
  - One permeability test per acre
  - Four density/thickness tests per acre
