

About this Report

The mission of the S.C. Department of Health and Environmental Control (DHEC) is to protect human health and the environment.

For the past 26 years, the S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws §§ 44-96-10 et seq. – has played an integral role in furthering this mission. The Act establishes a comprehensive framework for the safe, cost-effective and efficient management of solid waste and authorizes DHEC to:

- Develop and implement a regulatory framework for the proper siting, design, construction, operation and closure of solid waste management facilities (Section 44-96-260);
- Develop a state solid waste management plan (State Plan) (Section 44-96-60). The Act also requires county governments or regions to develop plans that are consistent with the State Plan and designed to achieve the state's recycling and waste reduction goals (Section 44-96-80);
- Promote waste reduction, recycling and resource conservation before disposal (Section 44-96-50); and
- Set waste reduction and recycling goals (Section 44-96-50).

The Act (Section 44-96-60) also requires DHEC to publish an annual report based in part on information that

counties and solid waste facilities are required to provide. (See page 2 for more information.)

"The South Carolina Solid Waste Management Annual Report" must be submitted to the Governor and General Assembly annually by March 15.

SECTION

This report, which serves as an update to the State Plan, reflects solid waste management activities in fiscal year (FY) 2016 (July 1, 2015 to June 30, 2016) and includes:

- The amount of material recycled by commodity and county;
- The amount and type of solid waste disposed of by county;
- The amount of solid waste imported and exported;
- · A listing of permitted solid waste facilities;
- A summary of the state's used motor oil recycling program;
- Recycling data for state agencies and colleges/universities;
- · An update on solid waste planning;
- Key state programs that assist local governments in meeting the requirements of the Act; and
- Recommendations for improving solid waste management.

Acknowledgements

The "South Carolina Solid Waste Management Annual Report for Fiscal Year 2016" is submitted by the S.C. Department of Health and Environmental Control (DHEC) in compliance with the S.C. Solid Waste Policy and Management Act of 1991 (S.C. Code of Laws § 44-96-60). In addition, Act 119 of 2005 mandates that agencies provide all reports to the General Assembly electronically. This report was published on March 15, 2017 by DHEC's Office of Solid Waste Reduction and Recycling.

The report serves as an update to the State Plan.

What is measured?

This report measures two types of solid waste and how they are managed – municipal solid waste (MSW) and total solid waste (TSW). See Table 1.1 for definitions. As required by the Act, the focus of this report is on MSW (Section 44-96-50).

Who reports?

Permitted solid waste facilities (e.g., Class 3 landfills) are required by the Act (Section 44-96-290) and subsequent regulation (R.61-107.19) to submit annual reports on disposal data to DHEC. County governments, regions, state agencies and state-supported colleges/universities are required to report recycling data annually to DHEC

(Section 44-96-80 and Section 44-96-140). Recycling data also is collected from municipalities, businesses and the recycling industry (and allocated to the counties where the material was generated), but these entities are not required to report. Because reporting by municipalities and businesses is strictly voluntary, data collection from these sources is inconsistent from year to year. (See Recommendation No. 1 on page 6.)

When Using this Report

All data is carefully vetted. When reviewing the tables, keep in mind that in general recycling tonnage is rounded to the nearest hundredth and disposal data is rounded to the nearest ton. Some totals do not add up due to rounding.

TABLE 1.1: What is MSW and TSW?		
MSW	TSW	
South Carolina adopted the U.S. Environmental Protection Agency's definition of MSW with few exceptions in October 2000. This was done as part of a nationwide effort to have consistency among the states on how solid waste disposal and recycling activities are measured.	TSW provides a much more comprehensive look at how much waste is generated, disposed of and recovered than MSW.	
MSW is defined in the Act (Section 44-96-50) as certain waste items generated from residential, commercial, institutional and industrial sources. MSW includes appliances, automobile tires, newspapers, office paper, cans, bottles, food waste, yard trimmings (mulched or composted) and packaging. South Carolina added tire-derived fuel, yard trimmings used as boiler fuel and motor oil recycled by do-it-yourself oil changers to its definition of MSW.	For the purposes of this report, TSW includes MSW as well as construction and demolition (C&D) debris, land-clearing debris, industrial process waste, automobile bodies and municipal sludge as well as combustion ash.	

TABLE 1.2: South Carolina's MSW Goals		
40% by 2020	South Carolina's goal is to recycle at least 40 percent of its MSW by FY20.	
3.25 p/p/d by 2020	The state's goal is to reduce MSW disposal to 3.25 pounds (or less) per person per day (p/p/d) by FY20.	

Recycling Rate Equation

The equation below is used for calculating the MSW and TSW recycling rates.

RECYCLING RATE (%) AMOUNT RECYCLED

AMOUNT GENERATED*

X 100

*Generated = Recycled + Disposed Of

A Note on the Numbers

It is important to note that the recycling data collected for this report does not completely reflect recycling efforts across South Carolina.

The Act (Section 44-96-290) and subsequent regulation (R.61-107.19) requires permitted solid waste facilities (e.g., Class 3 landfills) to report disposal data annually to DHEC resulting in nearly 100 percent of this information being collected.

In addition, the Act requires county governments (Section 44-96-80) as well as state agencies and state-supported colleges/universities (Section 44-96-140) to report recycling data. Businesses, however, are not required to report but can voluntarily provide information on their recycling activities. Businesses are not required to report, but can voluntarily provide information on their recycling activities.

It is estimated that MSW generation is about 60 percent residential and 40 percent commercial. Given that businesses are not required to report, the data collected from this source is inconsistent and incomplete and impacts the state's annual MSW recycling rate.

The Year at a Glance

This report defines and measures two specific types of solid waste – municipal solid waste (MSW) and total solid waste (TSW). (See page 2 for definitions.) As required by the Act, the focus of this report is on MSW (Section 44-96-50).

Recycling Rate	Waste Disposal Rate
for FY16	for FY16
25.4%	3.6 p/p/d*

*Pounds Per Person Per Day

Numbers, Changes & Trends, FY01 to FY16

- South Carolina's population grew from 4 million people in 2000 to 4.9 million in 2016 – a 23 percent increase. Despite that significant growth, South Carolinians disposed of only 118,023 additional tons of MSW in FY16 than in FY01.
- Per capita disposal in South Carolina decreased a little more than 14 percent – dropping from about 4.2 pounds in FY01 to 3.6 pounds in FY16.
- South Carolinians have disposed of 3.2 million tons of MSW and recycled 1.2 million tons of material on average each FY since FY01.
- Recycling is traditionally measured by weight not volume. Given that, it is important to note that not only have the materials in the waste stream changed in the past 15 years (less paper and glass, more plastic and food waste), but so has their weight. Manufacturers wanting to lower costs (and save raw materials) strive to make their products as light as possible. A plastic water bottle, for example, weighs 37 percent less than it did a decade ago. Aluminum cans and even glass bottles weigh less.

The Top 10 Takeaways for FY16

In FY16, the amount of MSW generated (recycled plus disposed of) was 4,308,161 tons. Of that amount, 1,094,569 tons (25.4 percent) were recycled and 3,213,592 tons (74.6 percent) were disposed of in MSW landfills.

The amount of MSW disposed of increased 155,204 tons (5 percent).

The state's per capita disposal increased slightly to 3.6 pounds.

The amount of MSW recycled decreased 17,632 tons (1.6 percent).

On average, each South Carolinian recycled about 438 pounds of MSW.

The amount of MSW recycled fell for the third straight FY. But it was the eighth consecutive FY (and 12 of the past 13 FYs) that residents recycled more than 1 million tons of material. More than 19 million tons of MSW have been recycled since FY01.

Tonnages for four commodities increased - Glass, Plastic, Organics and Banned Items.

Twenty-five counties met the waste disposal goal of 3.25 pounds or less disposal per day. Anderson County – with a 42 percent recycling rate – was the only county to meet the state's recycling goal (40 percent).

Residential recycling increased 15,911 tons – mostly due to a significant increase in the amount of Banned Items recovered.

Inconsistent reporting remains an issue impacting the integrity of the recycling rate.

- $2. \ \ \text{See Table 9.11 on page 97 for a breakdown by county of MSW recycling, disposal and generation.}$

Recommendationsfor Improving Solid Waste Management

The S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws § 44-96-60 – requires the S.C. Department of Health and Environmental Control (DHEC) to make annual recommendations to the Governor and General Assembly on how to improve the management of solid waste in the state.

Much has been accomplished since the passage of the Act. Each of South Carolina's 46 counties has a recycling program. The state's recycling infrastructure has grown to 85 curbside programs, 579 recycling drop-off centers and 912 used oil collection sites for do-it-yourself oil changers. College/university programs have excelled. Recycling is available at each of South Carolina's state parks and historic sites. Companies set zero waste goals. In the past five years, more than \$1 billion in capital investments has been made and 3,000 jobs created in the state's recycling industry.

At the same time, more rigorous requirements for landfills and other solid waste facilities were developed and implemented to better protect human health and the environment. The state's composting regulation was revised in order to support increased organics recovery.

The accomplishments are significant but much remains to be done.

Despite individuals, businesses, organizations, schools, colleges/universities and government agencies recycling more than ever, nearly 75 percent of the municipal solid waste (MSW) generated in South Carolina was disposed

of in landfills during fiscal year (FY) 2016 (July 1, 2015 to June 30, 2016). Disposal of valuable material is a waste of resources and lost economic opportunity. What steps need to be taken to keep it out of the landfill?

South Carolina is well prepared to answer this question by building on the foundation created by the requirements, policies and goals outlined in the Act that include:

- Ensuring that landfills and other solid waste facilities are properly sited, designed, constructed, operated and closed to protect human health and the environment;
- Promoting regional cooperation to manage solid waste more efficiently;
- Promoting waste reduction, reuse and recycling above other methods that preclude further use of the material:
- Working towards achieving South Carolina's waste reduction and recycling goals;
- Providing and improving outreach, education and access of information to residents, businesses, organizations, schools and others on solid waste management issues.

The recommendations that follow are key steps South Carolina can take to manage its waste more safely and efficiently, meet its waste reduction and recycling goals and realize more of the economic benefits of recycling.

Recommendations for FY16	
1. Improve reporting.	8. Develop a Solid Waste Emergency Fund.
2. Reduce food waste.	Recover more construction and demolition (C&D) debris.
3. Recover more yard trimmings.	10. Local governments should look for ways to grow more efficient recycling programs.
4. School districts should more fully embrace recycling.	 Prevent illegal dumping and facilitate removal of existing waste tire dumps.
State agencies should review programs and look for ways to improve.	12. Prevent illegal dumping of other material.
Colleges and universities should continue to lead by example.	13. Maintain and continue to develop recycling markets.
7. End the myth that recycling is free.	

Improve reporting.

The focus of this report, as required by the Act, is MSW (see definition on page 2) and specifically the state's MSW recycling rate. It is important to know that South Carolina's recycling rate reflects what is reported to DHEC on an annual basis – not necessarily what is actually recovered for recycling.

Currently, only county governments, state agencies and state-supported colleges/universities are required to report recycling efforts to DHEC. Businesses are not required to report – so it is unclear how much recycling data is missed. Lack of reporting by businesses becomes more significant when it is generally accepted that MSW generation is roughly 60 percent residential and 40 percent commercial.

There are efforts to secure commercial recycling numbers. Many counties ask businesses for recycling information, but most local governments don't have the resources to address this issue. DHEC, through its S.C. Smart Business Recycling Program and Green Hospitality Program, provides a Web-based reporting tool. DHEC

and local governments also work with processors to gather statewide commercial recycling tonnages. All of these efforts provide some numbers, but lead to incomplete and inconsistent reporting from year to year. It is important to note that permitted solid waste facilities are required to report to DHEC all material disposed of in South Carolina landfills or exported for disposal.

The state's recycling rate is calculated by dividing the state's total recycling tonnage by the state's total generation tonnage (recycling total combined with disposal total). DHEC receives complete information on disposal and residential recycling, but incomplete information on commercial recycling. Given that, the state's recycling rate is skewed and does not accurately reflect recycling efforts across all sectors.

With a goal to reduce per capita MSW disposal to 3.25 pounds or less and recycle 40 percent of all MSW generated by 2020, it is critical that the reporting of recycling efforts across all sectors (residential, commercial/institutional and industrial) improve.

RECOMMENDATIONS

Encourage large industries, businesses, recycling processors and haulers to report recycling data. Work on this recommendation with the S.C. Department of Commerce. If this effort fails, consider updating the Act to require mandatory reporting for recycling processors and businesses with more than 50 employees.

Continue providing technical assistance and training to local governments to secure and provide accurate reporting of residential tonnages and ways to secure more recycling data from commercial and industrial sectors.

Promote the benefits of having accurate and comprehensive recycling data. Governments and businesses that comprise the state's recycling industry will be able to properly plan, determine recycling behaviors from different sectors, measure recycling of specific commodities, and more efficiently maintain and/or develop recycling markets.

Reduce food waste.

Food waste is the No. 1 item thrown away by Americans accounting for 38.4 million tons (21.6 percent) of the nation's discards in 2014 according to the U.S. Environmental Protection Agency (EPA). Of that amount,

About 42 million
Americans are food
insecure including
13 million children and
5 million seniors.

only about 1.9 million tons (5 percent) were diverted from landfills for composting. South Carolina produced an estimated 641,916 tons of food waste in FY16 – 14.9 percent of the MSW generated in the state.

It is estimated that between 30-40 percent of all food grown and processed nationwide is never eaten – a loss

valued at more than \$160 billion annually according to the U.S. Department of Agriculture. Added to those numbers is the loss of natural resources used to produce food that is not consumed. At the same time, about 42 million Americans are food insecure including 13 million children and 5 million seniors according to Feeding America.

Several of the recommendations in last year's annual report addressing the issue were implemented this past fiscal year including the creation of a statewide public-private stakeholder group. As part of their input, DHEC took the lead on developing the Don't Waste Food SC campaign to make the public, businesses, schools, the hospitality industry, organizations and others aware of the issue and provide information on how they can help prevent food waste.

DHEC Director Catherine Heigel speaks at the Don't Waste Food SC kick-off at Harvest Hope Food Bank in Columbia. The campaign, launched July 13, 2016, is designed to increase awareness of the economic, environmental and social impacts of food waste. More information about the Don't Waste Food SC campaign is provided on the following page.

RECOMMENDATIONS

DHEC should work with the S.C. Department of Education, the S.C. Department of Agriculture and other key stakeholders to promote food waste reduction priorities and initiatives in the state's public schools. These efforts should include best practices for cafeterias, donation and share tables following federal and state guidelines. These efforts also should include making food waste prevention and reduction an integral part of their solid waste management program.

DHEC should work with the state's hospitality association and other stakeholders to promote food waste reduction at restaurants and other dining facilities. These efforts should include developing, promoting and implementing best practices to reduce food waste and providing information and guidance on federal and state legislation that outlines liability protection for donation. Part of these efforts can be integrated into existing DHEC initiatives including the S.C. Smart Business Recycling Program and the Green Hospitality Program.

The S.C. Department of Commerce should continue its work to encourage and secure infrastructure growth by recruiting companies that haul, process and manage organics.

Local government recycling programs should promote what consumers can do at home to prevent food waste and encourage backyard composting.

DHEC should continue to work with EPA, the S.C. Department of Commerce, local governments and other stakeholders on the development of organics recovery infrastructure throughout the state.

Recover more yard trimmings.

Yard trimmings comprised the third largest component (34.5 million tons or 13.3 percent) of the nation's MSW in 2014, but were the fourth-highest recovered commodity with 21 million tons (61 percent of what was generated) composted according to the EPA.

It is estimated that South Carolina generated 572,985 tons of yard trimmings in FY16. Of that amount, only 38 percent (221,524.6 tons) was recovered through composting and mulching. If South Carolina is to achieve its waste reduction

Composting saves landfill space, conserves resources, makes a good soil amendment, reduces the need for pesticides and creates jobs.

and recycling goals set for 2020, the recovery of yard trimmings must increase to the numbers seen nationally.

Composting keeps material out of the landfill, conserves resources, produces a nutrient-rich soil amendment that reduces the need for chemical fertilizers and creates jobs.

PREVENT DO NATE + COMPOST

The Don't Waste Food SC campaign – a collaborative outreach campaign created to reduce the No. 1 item thrown away in the state – was introduced this past July.

The campaign, created by DHEC, is designed to increase awareness of the economic, environmental and social impacts of food waste. It centers on prevention, donation and composting and provides information and technical assistance to stakeholders. It also challenges stakeholders – the faith-based community, food banks, food rescue organizations, grocery stores, composters, haulers, restaurants, hospitality facilities and governments – to do their part.

Visit www.scdhec.gov/dontwastefoodsc to learn more.

Still, managing yard trimmings provides challenges for local governments. While banned from Class 3 landfill disposal (with the intent of encouraging composting), yard trimmings still can be disposed of in Class 2 landfills providing local governments an easier management option. There are additional costs to managing yard trimmings as well as finding the space needed for composting or grinding operations. It is also much more economically viable to recover material in urban settings with higher populations than rural areas. The lack of markets for the material also often remains an issue.

RECOMMENDATIONS

Local governments should recover yard trimmings and report their activities. In FY16, only 22 of the state's 46 counties reported any recovery of yard trimmings.

Local governments should work together as well as with schools, colleges/universities and businesses to strive for economies of scale in the recovery of yard trimmings.

Local governments should offer backyard composting programs and provide technical assistance, outreach and compost bin sales. DHEC should continue offering grant funding to support these programs.

DHEC should work with the S.C. Department of Education to grow school composting programs. DHEC should continue to teach and promote composting to teachers and students through its "Action for a Cleaner Tomorrow" environmental curriculum supplement and provide technical assistance and grant funding.

The S.C. Department of Commerce should continue its work to drive infrastructure investment and market development.

DHEC and the S.C. Department of Commerce should develop an action plan to aggressively pursue the diversion of all organics from landfills. This plan should review all current activity, collection infrastructure, marketing strategies and markets.

School districts should more fully embrace recycling.

South Carolina has more than 1,260 public schools in 81 school districts with 50,000-plus teachers and 750,000 students. The sheer number of schools, staff and students results in a significant amount of waste generated – the vast majority of which could be prevented, recycled or composted.

The amount of waste generated that could be recovered is too large to ignore.

Unfortunately, there are many reasons schools do not recycle, but primarily it is because recycling is not free. Recycling is not free for local government or college/ university recycling programs. Recycling – often mistakenly promoted as an activity that will pay for itself – has never been free. As with any program or service – there are costs.

Unfortunately, many South Carolina schools that have recycling programs only collect one or two materials.

In some instances, lack of available markets or haulers is an issue. In other instances, school budgets and administrative constraints may prevent some schools from implementing programs.

The findings of a school waste study done by the Minnesota Pollution Control Agency found that Minnesota schools generate one-half pound of waste per student per day. Using that figure, South Carolina's public school students produce an estimated 375,000 pounds (187.5 tons) of waste per day. The study also found that more than 78 percent of a school's waste could be recovered through paper and container recycling as well as composting.

The amount of waste generated and the potential amount that could be recovered are too large to ignore.

It is commonly accepted that recycling has fundamental values such as conserving resources, saving energy, reducing the need to build landfills and supporting the state's recycling industry that in turn creates businesses and jobs. The result is that – ironically – recycling is taught in the classroom as a desirable behavior that results in environmental and economic benefits in many schools that don't have a recycling program.

Recycling and schools can be a perfect partnership. A recycling and/or composting program provides teachers the opportunity not only to offer a classroom lesson but a valuable real-life lesson as well to students – who ultimately will more likely understand and support South Carolina's local government programs. Waste reduction, recycling and composting programs allow schools to reduce their environmental footprint and make a substantial contribution in helping the state achieve its waste reduction and recycling goals.

RECOMMENDATIONS

The S.C. Department of Education should encourage and assist public schools in setting up and expanding waste reduction, recycling and composting programs. These services should be an accepted standard – not an exception.

School district administrators and boards should recognize that the cost of managing waste includes recycling and composting services and budget accordingly.

School districts should review their waste management costs and contracts. It may be possible to modify a contract and save some disposal revenue that can be applied to recycling and/or composting initiatives (e.g., one of the waste roll-off containers can be turned into a recycling roll off). If the waste hauler does not offer recycling services, a school district should consider requiring those services in its next contract. In addition, include provisions to assist with recycling programs in any housekeeping responsibilities and/or commercial cleaning contracts.

Recycling programs should be carefully planned, built and implemented – starting small if necessary. Local government recycling programs and school districts should work together. Local government recycling coordinators can provide invaluable technical assistance (e.g., what to collect, type and size of containers, collection options, market options).

Waste reduction initiatives should be implemented (e.g., double-sided printing, reusing paper, stopping unwanted mail, bulk purchasing) throughout each district.

DHEC should develop a Green Schools program to encourage and recognize schools for their waste reduction, recycling, composting and food waste prevention efforts.

State agencies should review programs and look for ways to improve.

State agencies are required by the Act to recycle, buy recycled-content products and annually report their recycling activities and recycled-content purchases to DHEC.

Beyond being required, state agencies have a responsibility to lead by example and are held accountable for operating in an environmentally responsible manner. State agencies generate significant quantities of recyclables and have the ability to make

thousands of purchasing decisions each year. By altering a few behaviors, state agencies can be significant supporters of recycling markets, in turn helping the state's economy.

In FY16, 59 state agencies reported recycling more than 9,400 tons of material. (See Section 7.) The number of agencies reporting – despite being required to report – has been inconsistent and dropped 19 percent from FY15.

RECOMMENDATIONS

DHEC and the S.C. Department of Corrections should assist state agencies in reviewing their recycling programs to discover areas of improvement.

DHEC should continue to pursue the Green Government Initiative to encourage and improve recycling, buying recycled and reporting by all state agencies through consistent communications and technical assistance to state agencies.

DHEC should offer a one-day certification program to each agency's recycling contact(s).

State agencies should use their considerable purchasing power to buy recycled-content products to support South Carolina's recycling industry.

DHEC and the S.C. Department of Commerce should work with the S.C. Department of Administration to update, promote and improve the implementation of South Carolina's Environmentally Preferred Purchasing Policy. The list of recycled-content products and specifications should be updated annually as required by the Act and promoted to all stakeholders. In addition, a list of state-term contracts containing recycled-content products as well as a state-wide system to track and report recycled-content purchases should be developed.

More to Know

Learn more about the recycling efforts of South Carolina's state agencies and colleges/ universities.

Visit www.scdhec.gov/recycle and select "Data and Reports."

Recycling Requirements for State Agencies & Colleges/Universities

The Act (Section 44-96-140) requires state agencies and state-supported colleges/universities to:

- Establish recycling programs for the collection of selected material including, but not limited to, aluminum, cardboard, glass, lead-acid batteries, paper, plastic, tires and used motor oil;
- Establish a program to reduce the amount of solid waste generated to the maximum feasible extent possible; and
- Report the type and amount of material recycled and all products purchased containing recycled-content material by September 15 of each year to DHEC. The Act sets a goal that at least 25 percent of all product purchases contain recycled-content material.

DHEC is required to submit a report on this information to the Governor and General Assembly by November 1 of each year.

Colleges/universities should continue to lead by example.

Due to their educational mission, large student populations, high community visibility and active involvement in research and new technology, South Carolina's colleges/universities have a special role

and responsibility in confronting the challenges of sustainability. That role includes contributing solutions to these challenges through not only teaching and research

South Carolina's colleges/universities have some of the state's best recycling programs.

but transforming that work into action on campus. This action, in turn, may be able to be replicated in communities across the state.

Few institutions in South Carolina have established such successful recycling programs as colleges/universities. In fiscal year (FY) 2016 (July 1, 2015 to June 30, 2016), colleges/universities reported recycling 44,712 tons of material – a 212 percent increase from FY15.

In addition, many colleges/universities have developed comprehensive sustainability programs and have taken the lead on composting and green purchasing.

RECOMMENDATIONS

Colleges/universities should continue to lead by example and expand or improve their recycling efforts with a focus on food waste reduction and recovery.

Colleges/universities should work with local governments and communities to focus on partnership possibilities (e.g., marketing of material, sharing operations).

Colleges/universities should develop and implement green purchasing policies.

Colleges/universities should stimulate recycling markets through green procurement practices by using the 7.5 percent price preference for recycled-content products and look for sustainable alternatives for larger and less frequent purchases. In addition, colleges/universities should join state agencies in adding green products and vendors to South Carolina's environmentally preferred purchasing policy.

Clemson University continues to have one of the nation's top collegiate recycling programs. In addition to campus-wide recycling, the school also collects materials at all of its sporting events. A team of student volunteers is essential for making the program successful.

End the myth that recycling is free.

Recycling is not free. It never was. When recycling re-emerged into the nation's consciousness in the 1990s, it was almost always promoted to residents that recycling would pay for itself through the revenue earned from the sale of the recovered material combined with avoided disposal costs. Many residents believed it then and still believe it now as well as a second myth that every material recycled has great value.

Both of these myths need to end. Residents must be made aware that they are paying for two basic solid waste management options: disposal and recycling. Both management choices help protect human health and the environment. But once a material is disposed of in a landfill, it has less value and the potential to produce only limited economic activity.

Conversely, recycling offers a chance to earn revenue, avoid disposal costs and generate further economic activity. Material that is recycled and reintroduced into a manufacturing process supports economic growth and

development through the creation of businesses, markets and jobs necessary to support those activities.

The economic impact study (see Section 4) completed in 2014 shows the significant, positive impact the recycling industry has on South Carolina's economy.

Residents also need to know that recyclables are commodities that are subject to the same market fluctuations in value as other commodities. Unfortunately, it is generally accepted that the market value of recyclables are more volatile than other commodities. Those highs and lows are unpredictable. When prices are good, revenues are good. When prices are down, programs are more stressed.

Local governments should carefully consider and measure the true costs of any option to managing solid waste and communicate that information to residents. All aspects should be considered including long-term management, monitoring, post-closure, environmental impacts and lost opportunities for material recovery.

RECOMMENDATIONS

DHEC and the S.C. Department of Commerce should promote the findings of the economic impact of recycling study conducted by the University of South Carolina. Key findings include showing that recycling can cost less than disposal during positive markets and that the recycling industry creates more jobs than the average South Carolina industry. See "The Economic Impact of Recycling" on page 19 for more information about this study.

DHEC should provide information to increase awareness of the costs of solid waste management. Integrate that campaign into the RecycleMoreSC campaign and other potential avenues.

Local governments should consider not having a separate charge for recycling or a specific commodity, but rather provide one cost with an explanation of all of the solid waste services offered.

Develop a Solid Waste Emergency Fund.

During this reporting period, the S.C. Office of Inspector General identified a lack of funding mechanisms to address environmental emergencies caused by the management of solid waste.

Given this direction, DHEC began discussions with stakeholders to identify funding options that would be used to create a solid waste emergency fund to address this issue and would allow cost recovery from responsible parties.

RECOMMENDATION

DHEC should continue its efforts to establish a solid waste emergency fund.

Recover more construction and demolition (C&D) debris.

C&D debris is material generated during the construction, renovation and demolition of buildings, roads and

bridges. This material includes concrete, drywall, asphalt, wood, bricks, shingles, metal, glass and plastic. The reuse and recycling of C&D material has significant environmental and economic benefits. (See the box below).

Measurement of the generation and recovery of C&D debris is difficult. While not included in MSW measurement,

it is accepted that the material is one of the largest components of the nation's total solid waste stream. More than 3 million tons of material was disposed of in South Carolina's 90 Class 2 (C&D debris) landfills in FY16. Another 600,000 tons of C&D debris was reported recycled. Given that, it is estimated that only 16 percent

of the C&D debris generated in the state was recovered.

South Carolina, like other states, faces two key barriers to increased recovery – low disposal costs and lack of markets. It is almost always less expensive for contractors and builders to dispose of the material than take the time to separate, store and find a market for it.

The failure to recycle or properly dispose of the material collected, along with limited markets, can lead to the creation of illegal stockpiles or dumped C&D debris.

Only about 600,000 tons of C&D debris were recovered in FY16.

RECOMMENDATIONS

DHEC and the S.C. Department of Commerce should develop an action plan with key stakeholders to address C&D debris recycling. The plan should include policy strategies, infrastructure development, market development, technical assistance, guidance, outreach/education and a goal to cut C&D debris in half by 2030.

DHEC should develop a comprehensive Web-based clearinghouse addressing C&D debris.

Local governments should consider ordinances and/or disposal bans to increase recovery that will assist infrastructure and market development.

The Benefits of C&D Debris Recycling

The recovery of C&D debris has many environmental and economic benefits including:

- Conserving resources;
- Reducing transportation costs when the material is reused onsite;
- Reducing the need for landfills;
- Offsetting the environmental impact associated with the extraction and consumption of natural resources and production of new materials;
- Providing increased business opportunities within the local community when deconstruction and selective demolition methods are used;
- Creating jobs; and
- Lowering building project expenses through avoided purchases, disposal costs and the donation of recovered material to qualified 501 (c) (3) charities – which provides a tax benefit.

Local governments should look for ways to grow more efficient recycling programs.

Every local government recycling program – urban or rural, small or large and everything in between – can always improve. Each program should constantly strive to increase participation and the amount of material

recovered while at the same time reducing the amount of unwanted material collected. Every improvement makes a program's and South Carolina's overall recycling efforts more successful.

RECOMMENDATIONS

Strive to offer continual outreach/education to provide a clear and consistent message. Significant revenue is used to purchase trucks, recycling containers and the overall infrastructure of a program. A comprehensive outreach/education program will help provide a good return on that investment. Develop, implement and stick with the outreach/education plan. (See "Education is key to successful recycling programs" on the following page.)

Continue to work with other recycling professionals and organizations for fresh ideas and assistance.

Work with local businesses and recycling processors to promote commercial waste reduction and recycling. Use the S.C. Smart Business Recycling Program to help with reporting of these activities.

Work with schools. See Recommendation No. 4 on page 9.

Always keep track of and evaluate the market prices programs receive for their material. Track revenue earned and avoided disposal costs.

Identify improvements that can be made without additional costs.

Recycle beyond the curb. Add drop-off locations to keep or add a commodity that it not accepted at the curb.

Offer assistance with and resources for backyard composting.

Add recycling bins in public spaces.

Offer promotional events to collect hard-to-recycle items.

Buy recycled. It is the final step in making recycling work.

RecycleMoreSC Campaign helps brand recycling in South Carolina

The RecycleMoreSC campaign is designed to reinvigorate recycling in South Carolina by:

- Promoting the economic and environmental benefits of recycling,
- Providing tools to local governments to present a clear, consistent message across the state; and
- Challenging residents, businesses and others to do their part and recycle more.

The campaign is the centerpiece effort of the 40by2020 Partnership. The partnership is a group of public and private stakeholders dedicated to sharing knowledge, coordinating resources and working together to help South Carolina meet or exceed its 40 percent recycling goal set for 2020.

The partnership includes Pratt Industries, Sonoco Recycling, the S.C. Beverage Association, PalmettoPride, the S.C. Department of Commerce and DHEC.

Learn more at www.recyclemoresc.org.

Education is key to successful recycling programs.

Recycling is a choice. Residents either decide to throw away the aluminum can, plastic bottle or cardboard or place the item into a recycling container. Getting residents to make recycling the choice has a significant impact on a community's recycling success.

Education/outreach plays the key role in the success of any program. Begin with the basics. Residents need to know what to recycle, where to recycle, how to recycle and the value of recycling. Beyond that, education/outreach

Residents need to know what, where and how to recycle as well as the value of recycling.

programs also should strive to motivate and encourage participation that makes residents better recyclers and results in higher recycling rates. Education also ends wish-cycling – the new but extremely common practice of residents placing non-recyclable items into the recycling container hoping they can be recycled. Unwanted material makes processing recyclables more difficult and costly, creates more waste and increases costs for local governments.

Each local government should develop and implement an annual education/outreach plan. There are many options to consider including:

- Place a sticker on the roll cart or bin of what is accepted and what isn't. Do "Oops" Tags to remind residents what is not accepted. Do "Thank You" Tags to provide positive feedback.
- Update website and make information as easy-to-find as possible beginning with how to get a bin or roll cart and what is and isn't accepted.

- Review signage at convenience centers. Make sure it is easy to follow so residents know what to do. Post temporary signage as needed to reinforce an issue or message.
- Mail an annual postcard to all households serviced with easy, basic information (e.g., yes and no lists, where to get more information). Consider a refrigerator magnet with same information. Include recycling information in new home packets.
- Advertise when and where possible (e.g., billboards, posters in libraries or stores, bus advertisements, neighborhood newsletters, social media). Collection trucks (public or private) should have recycling signage.
- Target non-recyclers. Learn from your collectors which neighborhoods are not recycling.
- Consider neighborhood recycling captains to get out the word. Make the initiative part of the overall message. Identify neighborhoods, residents and businesses that are excelling and promote them (e.g., media opportunities, website, newsletters).
- Provide the economic and environmental benefits of recycling to local decision makers.
 Share successes.
- Adopt the RecycleMoreSC campaign with branded material already in place. Provide waste reduction and recycling information beyond the program (e.g., how to reduce food waste, donating clothes, recycling at work, retailer options for items such as electronics and rechargeable batteries).
- Adopt the Don't Waste Food SC campaign.

Prevent illegal dumping of waste tires and facilitate removal of existing waste tire dumps.

South Carolinians generate an estimated 4.5 million waste tires every year. When managed improperly – dumped or stored illegally – tires can become a health hazard by holding water and attracting mosquitoes as well as creating potential fire hazards and unsightly nuisances.

Unfortunately, many waste tires do not take a direct route to a tire recycler. The state continues to have illegal dumping and is working to identify responsible parties to remove and manage illegally dumped tires. The cleanup of existing piles, however, is not a solution. Preventing the creation of waste tire piles is critical to the success of any waste tire management program.

When managed properly, tires can be used in construction activities and new products as well as burned for energy recovery. Most waste tires generated in South Carolina are chipped and burned in place of other fuels (e.g., coal).

Tires also are used as a substitute for gravel or other aggregates in septic tank drain fields or other drainage applications. Wire-free tire rubber can be used for higher-value products. Chipped tire rubber, for example, can be used in place of wood chips in playgrounds. Finely ground

tire rubber can be formed into running tracks or molded into industrial mats.

The proper management of waste tires continues to be a priority. DHEC has initiated steps to prevent illegal tire dumping and to help ensure the movement of tires to recycling facilities. These initiatives include a regulation revision (R.61-107.3 Solid Waste Management: Waste Tires) that became effective in 2015. The revision clarifies reporting and record keeping as well as expands the operational, permitting and registration requirements for haulers, collectors and processors of waste tires. Still, more work is needed.

One important change is new financial assurance requirements for certain waste tire haulers. Waste tire haulers that haul tires for compensation by other persons are now required to provide \$10,000 in financial assurance in order to become registered. Financial assurance is not required for persons who haul 15 or fewer tires at any time or for those who haul tires they have generated in the course of their own business.

DHEC is working with stakeholders to ensure understanding of the provisions of the regulation and provides technical assistance upon request.

RECOMMENDATIONS

Improve markets. Strong markets for waste tires can't happen without end-users that are knowledgeable about opportunities for using recycled tire rubber in manufacturing and engineering applications and can't be sustained without healthy waste tire processors to supply quality product. DHEC and the S.C. Department of Commerce – in conjunction with tire manufacturers, tire processors, research institutions and others – should continue efforts to promote higher-value uses for waste tires and a climate where the economics of waste tire processing can sustain suppliers of processed tire material.

Gain an understanding of the potential dangers of crumb tire rubber. DHEC should work with EPA and other stakeholders to learn about and communicate any health risks from using crumb rubber in certain applications (e.g., playgrounds, sports turfs).

Minimize the opportunities for illegal tire disposal. DHEC efforts should include full implementation of the manifesting and registration requirements. Tire generators and retailers must verify their waste tires are hauled only by legally registered haulers and that they are delivered to appropriate facilities. DHEC should work with waste tire generators, haulers, local governments and waste tire processors to ensure that only properly bonded waste tire haulers are used to move tires.

Engage law enforcement and anti-littering organizations. DHEC should work with state and local law enforcement and anti-littering organizations to locate illegal tire dumps and stockpiles and identify offenders. DHEC also should work with law enforcement to deter illegal dumping and to ensure offenders are dealt with consistently and with all available force of law and regulation. DHEC should work with anti-littering agencies, non-profits, local governments and community leaders to increase awareness of tire dumping issues and to promote cooperation between law enforcement and environmental groups.

Involve local governments. DHEC should continue to assist county and municipal governments in implementing waste tire management programs that prevent illegal dumping and encourage the purchase of high-value products made from waste tires. DHEC also should work with local governments to develop programs that expedite the removal of tire dumps and stockpiles.

Perform a comprehensive review of the waste tire program. DHEC and other stakeholders should identify statutory, regulatory or process changes that would help incentivize the proper management of waste tires, prevent illegal dumping and encourage development of a more robust recycling industry.

Develop a waste tire website. DHEC should create a comprehensive Web-based clearinghouse addressing waste tire issues that impact all stakeholders (e.g., public, recyclers, haulers, retailers, local governments).

Prevent illegal dumping of other material.

Tires, C&D debris, land-clearing debris and electronics are the materials most frequently dumped illegally.

Illegal dumping often results in property owners or taxpayers paying for the cleanup.

The most common practice is dumping

material in a remote area. Another common problem is when material is collected for recycling and stockpiled with a minimum amount being recycled and the remainder left unmanaged. Both activities result in the creation of illegal dumping that degrades property values and puts human health and the environment at risk. Both activities often result in property owners or taxpayers paying for the cleanup.

The underlying causes of illegal dumping are varied, but generally fall into the following categories:

- Low Risk Haulers that dump tires and land-clearing debris and other material face a low risk of being identified because the material
- they dump is difficult to trace to the source. Law enforcement and judicial bodies also may not consider the impact of this dumping on the health, environmental or economic welfare of a community, resulting in low fines and penalties against
- Cost Factors The cost of properly recycling or disposing of certain materials creates an incentive for illegal dumping. The average fee (\$106 per ton) to recycle waste tires, for example, is higher in South

Carolina than the cost (an average of \$41 per ton) to properly dispose of MSW in a landfill. In addition, when a recycled material has a low intrinsic value, the costs to process and sell the material may be greater than the revenue received from its sale. Collectors may stockpile material to avoid processing costs.

- Generator Responsibility Waste generators sometimes encourage illegal dumping by choosing the lowest cost option available to dispose of waste, without regard for how their waste is managed.
- Statutory and Regulatory Exemptions The Act (Section 44-96-170) provides regulatory exemptions for recycling activities. While this is a positive incentive for legitimate recyclers, some operators use these loopholes to claim they are performing a recycling activity when, in fact, their activities more closely resemble unpermitted landfills.

RECOMMENDATIONS

dumpers.

DHEC and other regulatory agencies, local governments, businesses and residents should work together to prevent illegal dumping.

The S.C. Department of Commerce should continue to strive to develop strong markets for recyclable material as well as higher-value end uses.

South Carolina should consider statutory and regulatory changes to hold haulers, processors and generators more accountable for the proper collection and transport as well as the recycling or disposal of solid waste and recyclables.

Local governments should implement more robust litter control policies and practices, including cooperation between law enforcement agencies, and consider adding litter control staff.

Maintain and continue to develop recycling markets.

Recycling markets and market development are indispensable components of sustainable materials management as well as economic development. Markets use material that otherwise would be disposed of and keeps it in circulation – conserving resources, creating jobs and helping protect the environment. Recycling only works when there are businesses willing to buy and process the material that is collected.

Recycling only works when there are businesses willing to buy and process collected material.

South Carolina has a robust recycling infrastructure with more than 520 companies (See Section 4) and access to other markets in the Southeast that need recovered material. These markets are available for most commodities – but not all – and continue to be impacted by low regional landfill tipping fees, commodity price fluctuations and competition with virgin material.

Nationally, recycling markets (i.e., recovered commodity prices) remain one of the industry's biggest concerns. In the past FY and beyond, markets remained flat or declined, but at the same time virtually no curbside programs were dropped.

South Carolina has several key players focused on recycling markets. The S.C. Department of Commerce's Recycling Market Development Advisory Council (RMDAC) works to create, maintain and grow markets. The state also is a member of the Southeast Recycling Development Council (SERDC). SERDC represents 11 states that work toward coordinating efforts to promote recycling and help companies across the region secure a clean, consistent supply of recovered material.

RECOMMENDATIONS

RMDAC should continue to work to identify and grow recycling markets, develop strategies to help increase the recovery of material.

The S.C. Department of Commerce should continue to work with stakeholders to improve infrastructure to increase the quality and quantity of recovered food waste.

The S.C. Department of Commerce should continue its work on increasing plastics recovery and supporting the recycling industry through the "Your Bottle Means Jobs" campaign.

Encourage the recycling industry to assist stakeholders (e.g., local governments and businesses) to improve the quantity and quality of recovered material through outreach, technical assistance and partnerships.

Promote the economic impact of recycling to decision makers and the public.

DHEC and the S.C. Department of Commerce should work to promote and increase green purchasing by state government and to increase the use of recycled-content material developed by South Carolina companies.

Glass markets remain a huge issue nationwide. Numerous programs in the state have dropped curbside glass collection due to low value, the cost of collection and hauling, and limited markets. Other key market issues include increasing the recovery of plastic, carpet, food waste and construction and demolition debris.

Create a job today.

The plastics recycling industry in the Carolinas is responsible for more than 3,500 jobs and is growing. Unfortunately, it is estimated that more than 70 percent of all plastic bottles are thrown away – depriving companies of enough material to run their plants efficiently.

To address this issue, the S.C. Department of Commerce and other stakeholders created the Your Bottle Means Jobs campaign. If each South Carolina household recycled just two more plastic bottles a week, 300 jobs could be created and the industry would continue to invest and expand.

Visit **www.yourbottlemeansjobs.com** to learn more.

The Economic Impact of Recycling

Recycling is an essential part of the nation's and South Carolina's economy. By transforming waste into valuable raw material, recycling stimulates economic development, creates jobs and businesses, produces tax revenue and generates income for businesses and local governments from the sale of recyclables.

The state's recycling industry has a \$13 billion annual impact on South Carolina's economy according to a 2014 study done by the College of Charleston. It is comprised of more than 520 companies that collect, haul, process and broker material, sell equipment and manufacture recycled-content products. It includes 10 plastic reclaimers, five recycled paper manufacturing facilities, three steel mills and one recycled aluminum manufacturer. Overall, the industry also provides more than 22,000 direct jobs, \$2.7 billion in annual labor income and nearly \$330 million in state and local taxes every year.

The recycling industry continued to grow in 2016 with five new or existing companies making \$102 million in capital investments and creating 356 jobs according to the S.C. Department of Commerce. In the past five years, the industry has announced \$1.1 billion in capital investments and 3,000 jobs created.

New Economic Impact Study Released

The S.C. Department of Commerce released the results of a new study done by the University of South Carolina's Darla Moore School of Business on the economic impact of recycling. The study, done in conjunction with the S.C. Department of Health and Environmental Control's

(DHEC) Office of Solid Waste Reduction and Recycling, had several key findings including:

- Recycling can cost less than disposal during positive market trends. The relative cost of recycling vs. disposal is largely dependent on the price that recycling firms can sell processed recycled materials for on the open market. According to the study, the price for processed recycled materials peaked at \$146 per ton in 2011 and dropped to \$52 per ton by 2016. As a result, recycling was about \$28 per ton cheaper than disposal in 2011, but was \$9 per ton more expensive than disposal in 2016.
- The recycling industry in South Carolina supports an employment multiplier of 2.4. This implies that for every 10 jobs generated in the recycling industry an additional 14 jobs are created elsewhere in the South Carolina economy. Thus, the recycling industry has the ability to scale up employment at a higher rate than the average South Carolina industry; and
- Small increases in household recycling can have a substantial statewide impact. For example, if just one percent of all South Carolina households were to recycle an additional eight newspapers per month, this additional effort could generate an annual gain of up to \$3.8 million in economic activity for the state, 16 jobs and about \$794,000 in labor income. Similar results can be observed for many recycled goods across commodity types.

The complete report, "The Benefits of Increased Household Recycling Rates in South Carolina: A Commodity-Level Analysis," can be found at https://sccommerce.com/sites/default/files/all/sc recycling economic impact.pdf.

Recycling Market Development

The S.C. Department of Commerce's Recycling Market Development Advisory Council (RMDAC) supports the state's recycling industry by working to build markets, increase material recovery and promote the impact of recycling on South Carolina's economy.

Established by the S.C. Solid Waste Policy and Management Act of 1991, RMDAC is comprised of 14 members appointed by the Governor that represent the solid waste industry, recycling sectors, government, higher education and the public.

The Recycling Market Development Division staff coordinates the activities of the council while providing technical and economic development assistance to assist recycling businesses and the industry. Key market development activities for the past fiscal year include composting, food waste, carpet, plastic and glass.

Learn more at https://sccommerce.com/events/recycling-market-development-advisory-council.

The Economics of Managing Solid Waste in South Carolina

The collection, proper disposal and recycling of solid waste are essential services that have long been recognized as a critical segment of a community's infrastructure.

These services are no simple task. They include disposal, recycling, staffing, outreach/education, trucks, fuel, equipment, buildings, land, insurance and managing facilities (e.g., landfills, transfer stations).

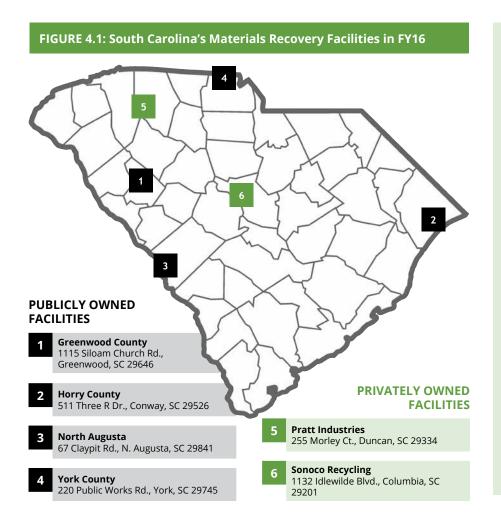

These services are also expensive. Local governments spent more than \$342 million to manage solid waste in fiscal year (FY) 2016 (July 1, 2105 to June 30, 2016) and more than \$1.9 billion since FY11 according to the full-cost disclosure information reported to DHEC.

Local governments face a difficult balancing act of costs and services. Recycling programs compete with the low cost of disposal in South Carolina. The state's average tipping fee is \$41 per ton – about \$3.50 less per ton than the regional average according to a 2016 study.

The true cost of recycling is much more difficult to measure in part due to outside factors beyond the services provided to residents. Recycling programs are impacted by the markets and materials recovery facilities (MRFs) that are available.

South Carolina has robust state and regional markets for many but not all materials. The state has only six MRFs. (See Figure 4.1.) South Carolina also lacks a MRF in the low country leaving a huge regional gap that includes one of the state's largest county recycling programs. All of this impacts costs.

Recycling allows local governments to avoid disposal costs – an often forgotten positive – and earn revenue from the sale of recyclables. Unfortunately, this revenue is inconsistent because recyclables are commodities that are subject to the same change in value as other commodities. Commodity prices have been low for the past few years, but began to improve near the end of fiscal year (FY) 2016 (July 1, 2015 to June 30, 2016).

Estimated Lost Revenue

It is estimated that nearly 590,000 tons of easily recyclable material – aluminum cans, cardboard, glass bottles and jars, office paper, plastic bottles and steel cans – were disposed of in FY16.* Using the state's average tipping fee of \$41 per ton, it is projected that local governments spent more than \$24 million to dispose of this material.

It is also estimated that more than \$52 million in potential revenue from the sale of this material was lost based on the average revenue received per ton as reported by local governments of each of these types of material.

* The estimated amount of material disposed of that could have been recycled is calculated by using the U.S. Environmental Protection Agency's most recent municipal solid waste (MSW) generation rates to South Carolina's FY16 generation.

Recycling by Commodity

The S.C. Solid Waste Policy and Management Act of
1991 – S.C. Code of Laws § 44-96-60 – requires the S.C.
Department of Health and Environmental Control (DHEC)
to report the amount of municipal solid waste (MSW)
recycled by commodity and county. This information
is gathered from counties – which are required to
provide this data to DHEC (Section 46-96-80) – and from
voluntary reporting by businesses and
municipalities.

Paper, metal and

This section highlights the commodities that comprise MSW as defined by South Carolina – glass, metal, paper, plastic, organics, banned items, miscellaneous items and commingled recyclables. Glass, metal, paper and plastic are considered traditional commodities and serve as the foundation of local government recycling programs.

Appliances, electronics, lead-acid batteries, used motor oil and whole waste tires are banned by law from any type of landfill disposal. Yard trimmings are banned from disposal in Class 3 landfills. The majority of yard trimmings, however, are disposed of in Class 2 landfills. See Table 9.1 on page 86 for a breakdown of landfill classifications.

Miscellaneous recyclables include antifreeze, cooking oil, fluorescent bulbs, hazardous household material (HHM), inkjet/toner cartridges,

organics comprised

more than 67 percent

of the MSW recycled

in FY16.

mattresses, paint, rechargeable batteries, textiles, used motor oil filters and wood packaging. Levels of collection differ in local government programs.

HHM is reported as a miscellaneous item and highlighted in this report because it poses a potential risk to human health and the environment. For information on local government HHM programs, see Table 5.19.

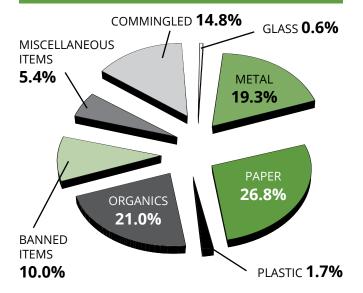

SECTION

Commingled recyclables consist of a variety of material collected together and not reported by individual material type.

Overall, paper was the top commodity recovered – comprising 26.8 percent of the MSW recycled in FY16. Metal, paper and organics combined to make up more than 67 percent of the MSW recycled.

See Chart 5.1 and Table 5.2 for a breakdown of commodities recycled by percent and amount for FY16. See page 30 for a breakdown of the amount of each commodity recycled since FY12.

CHART 5.1: MSW Commodities Recycled as a Percentage of All MSW Recycled in FY16*

*NOTES: Commodities are measured by weight. Percentages do not equal 100 percent due to rounding.

TABLE 5.2: Amount of MSW Commodities Recycled in FY16

COMMODITY	TONS

Used Motor Oil Recycling

The S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws § 44-96-160 – requires the S.C. Department of Health and Environmental Control (DHEC) to publish an annual report on the state's used motor oil recycling program for do-it-yourself oil changers (DIYers).

According to the Act, the report must include:

- The amount of used motor oil collected in each county;
- The number of used motor oil collection sites available in each county; and
- A summary of local government programs receiving grant funding from DHEC.

The Act requires transporters of used motor oil to register and report to DHEC the amount hauled each calendar year. For purposes of this

report, however, the amount of used motor oil collected is presented by fiscal year (FY) – July 1 to June 30 – as reported by counties.

Nearly 888,079 gallons of used motor oil were collected from DIYers in South Carolina during FY16. Overall, there are few barriers to recycling used motor oil, filters and bottles. Despite a continuing price drop, some local governments still earn revenue from the sale of used motor oil. Scrap dealers and steel mills accept drained and crushed used motor oil filters. Bottles, if properly drained, can be recycled with other plastic bottles.

SECTION

Chart 6.1 illustrates the success of the used motor oil collection program by FY.

Table 6.2 lists the number of sites and gallons collected by county as well as grant awards to the county or municipalities within that county.

There is a fee of 2 cents per quart of motor oil collected at the wholesale level. Part of this funding is used to provide grants for local governments focusing on DIY used motor oil collection and recycling. In FY16, \$704,893 was awarded to local government programs and primarily used for the purchase of equipment and supplies associated with used motor oil collection sites. Funds also were used to cover costs for used motor oil filter recycling, public education and professional development of local government recycling coordinators and others.

In addition to used motor oil, most county and some municipal recycling programs collect used motor oil filters and bottles from DIYers.

The amount of used motor oil filters and motor oil bottles recycled is difficult to determine or is not always available. For example, many counties collect and market filters with other metals. Given that, the data presented in Section 5 (Table 5.7) does not reflect the full extent of used motor oil filter recycling in the state.

In South Carolina, only used motor oil recycled by DIYers is counted as part of the state's municipal solid waste recycling rate. In FY16, DIYers recycled nearly 888,079 gallons (or about 3,099 tons) of used motor oil – an increase of nearly 25 percent from the previous FY.

CHART 6.1: Gallons of Used Motor Oil Recycled by S.C. DIYers by FY

^{1.} The Three Rivers Solid Waste Authority (SWA) provides solid waste management services to local governments in Aiken, Allendale, Bamberg, Barnwell, Calhoun, Edgefield, McCormick, Orangeburg and Saluda counties.

NOTES: The majority of sites listed above are provided by local governments, but the total number (912) includes retailers, quick lubes and auto parts stores. Gallons are converted to weight (1 gallon = 7 pounds).

 $^{2. \ \} The \ Tri-County \ SWA \ provides \ solid \ waste \ management \ services \ to \ local \ governments \ in \ Edge field, \ McCormick \ and \ Saluda \ counties.$

[♦] Grant funding awarded to municipalities and regional authorities primarily is used to promote used motor oil recycling. Collection sites operated and/or used motor oil collected by a municipality are included in the county's total.

Recycling: State Agencies & Colleges/Universities

The S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws § 44-96-140 – requires state agencies and state-supported colleges/universities to:

- Establish recycling programs for the collection of selected material including, but not limited to, aluminum, cardboard, glass, lead-acid batteries, paper, plastic, tires and used motor oil;
- Make necessary modifications to their programs to ensure material is recycled to the maximum extent possible; and
- Report the type and amount of material recycled as well as information on the purchase of recycled-content products by September 15 of each year to the S.C. Department of Health and Environmental Control (DHEC).

State agencies and colleges/universities recycled more than

54,000 tons of material in FY16.

report and reflects recycling and buying recycled activities for fiscal year (FY) 2016 (July 1, 2015 to June 30, 2016). For more details, see the box below.

Data regarding the amount of material recycled was received either directly from the state agency or college/university that completed the survey provided by DHEC or from vendors providing recycling services. Both public and private colleges/universities are

> included in this report although only state-supported colleges/universities are required by the Act to provide information.

In FY16, state agencies and colleges/universities recycled more than 54,000 tons of material - an increase of about 176 percent from the 19.615 tons recycled in FY15. This data was compiled from the information

reported by 59 state agencies, two state agency complexes (collectively 22 state agencies) and 28 colleges/universities.

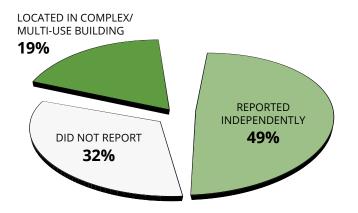

Overall, state agencies reported recycling 9,462 tons of material in FY16 – about a 79 percent increase from the 5,289 tons recycled the previous FY. Paper was the most recycled commodity followed by metal.*

Colleges/universities reported recycling about 44,712 tons of material – a 212 percent increase from the 14,325 tons recycled the previous FY. C&D debris was the most recycled commodity followed by paper. In FY16, colleges/universities recycled 36,536 tons of C&D debris an increase of 845 percent from the previous FY.

The percentage of state purchases that contain recycled material cannot be determined because no statewide system to track those purchases exists. The recycled-content products purchased most frequently by state agencies and colleges/universities were office paper and inkjet/toner cartridges.

DHEC is required to submit a report on this information to the Governor and General Assembly by November 1 of each year. This section is a condensed version of the

CHART 7.1: Percentage of State Agencies Reporting Recycling Data

Want more information?

Visit www.scdhec.gov/recycle (then select "Data and Reports") to see the full report about the recycling efforts of South Carolina's state agencies and colleges/ universities.

Recycling by State Agencies

State agencies reported recycling 9,462 tons of material – an increase of about 79 percent from FY15. Compared to the previous FY, there were noteworthy decreases in glass recycling (about 45 percent) and banned items (47 percent). More material was commingled in FY16 – resulting in a decrease in individual commodity

numbers. The largest contributions to the FY16 increase in recycling were paper, metal and plastic. Paper and metal were the most recycled products.

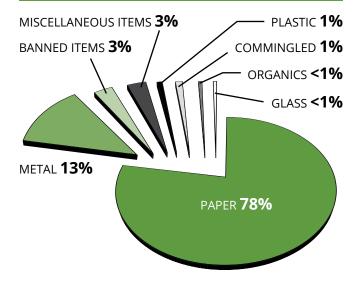

State agencies recycled 9,462 tons of material in FY16 – about 79 percent more than FY15.

Fifty-nine individual state agencies

reported this year compared to 72 in FY15. Due to the housing of state agencies within multi-office buildings and complexes, those located within the Capitol Complex and the South Trust Building in Columbia are reported under those titles. State agencies within these structures who reported their own numbers are listed as individual agencies.

For a complete list of state agencies that reported FY16 data, see pages 36-37.

CHART 7.3: Percentage of MSW Recycled by State Agencies

NOTES: Percentages may not add up to 100 percent due to rounding of numbers. While C&D debris is included in the "State Agencies & Colleges/ Universities Recycling & Buying Recycled Annual Report," it is not included in the state's MSW recycling rate.

Recycling by Colleges/Universities

Colleges/universities reported recycling about 44,712 tons of material – a 212 percent increase from the 14,325 tons recycled the previous FY. This increase is largely influenced by C&D debris. In FY16, colleges/

universities recycled more than 36,536 tons of C&D debris – an increase of 845 percent from the previous FY.

Recycling by the state's colleges/universities increased by 212 percent in FY16.

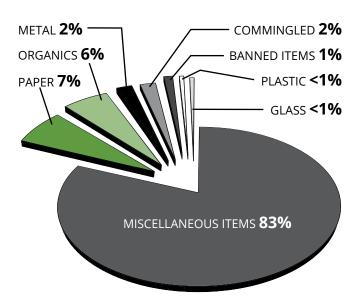

Compared to FY15, plastic and glass recycling almost

doubled while commingled material, metal and paper all decreased. The most recycled commodities in FY16 were C&D debris, paper and organics.

Twenty-eight colleges/universities reported recycling and buying recycled data for FY16 (compared to 39 reporting in FY15) with 13 colleges/universities reporting an increase in their total recycling compared to FY15. One university reported for the first time in FY16.

For a complete list of colleges/universities that reported FY16 data, see pages 37-38.

CHART 7.5: Percentage of MSW Recycled by Colleges/Universities

NOTES: Percentages may not add up to 100 percent due to rounding of numbers. While C&D debris is included in the "State Agencies & Colleges/ Universities Recycling & Buying Recycled Annual Report," it is not included in the state's MSW recycling rate.

Recycling: The State & Counties at a Glance

The S.C. Solid Waste Policy and Management Act of 1991 – S.C. Code of Laws § 44-96-80 – requires counties or regions to annually report municipal solid waste (MSW) recycling data by commodity and amount to the S.C. Department of Health and Environmental Control. The commodities reported are: glass; metal; paper; plastic; organics; banned items; miscellaneous items; and commingled recyclables.

Recycling data also was collected from other sources including waste tire processors, electronics recycling vendors, used motor oil collectors, state agencies and colleges/universities as well as businesses and industries. This data was attributed to counties based on population or source. Once collected, the data is placed into one of three categories based on the source of the material: residential; commercial/institutional; and industrial (office/packaging).

Businesses and industries are not required to report their recycling activities. Unfortunately, the voluntary reporting

by these sources is inconsistent and effects the state's ability to accurately measure its recycling efforts.

South Carolina's MSW recycling rate decreased to 25.4 percent in fiscal year (FY) 2016 (July 1, 2015 to June 30, 2016) from 26.5 percent in FY15. In South Carolina, only MSW is used to measure the state's recycling efforts. (See the definition on page 2.) Overall, the amount of MSW recycled decreased less than 1 percent from 1,101,190 tons in FY15 to 1,094,569 tons in FY16. For total MSW and residential recycling tonnages since FY12, see Table 8.3.

The state's goal is to recycle at least 40 percent of its MSW and reduce MSW disposal to 3.25 pounds (or less) per person per day (p/p/d) by 2020. In FY16, only one county – Anderson – had a recycling rate greater than 40 percent. Twenty-five counties met the waste reduction goal of 3.25 p/p/d or less. (See Table 8.1.) For a county-by-county comparison of MSW recycling and disposal data, see Table 9.11 on page 96.

Disposal

The S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws §§ 44-96-10 et seq. – and subsequent regulation (R.61-107.19) require permitted private and public solid waste landfills to annually report the amount and type of solid waste disposed of to the S.C. Department of Health and Environmental Control (DHEC).

South Carolina disposed of 3,231,592 tons of MSW in FY16 – an increase of 5 percent (more than 155,000 tons) from FY15.

This section focuses on disposal of both municipal solid waste (MSW) and total solid waste (TSW) as defined on page 2. As required by the Act (Section 44-96-50), the focus of this report is on MSW.

In fiscal year (FY) 2016 (July 1, 2015 to June 30, 2016) there were 378 solid waste facilities operating under the authority of 15 types of permits in South Carolina. (See Section 10 for a complete list of facilities.) Of that total number of facilities, 156 were landfills. There are three landfill classifications – each of which accepts specific material. See Table 9.1.

Key Disposal Indicators from FY16

The amount of material disposed of in Class 1 landfills increased 1.5 percent (1,035 tons) in FY16 – rising to 69,241 tons. See Table 9.13 for Class 1 FY16 disposal totals by county. The amount of C&D debris and certain industrial waste disposed of in Class 2 landfills decreased by less than 1 percent (5,196 tons) to 3,062,192 tons in FY16. See Table 9.14 for a list of Class 2 landfills including permitted annual disposal, FY16 disposal and estimated remaining life.

Of the 27 Class 3 landfills, 11 are publicly owned and 16 are privately owned. (See the map on page 89.) The privately owned landfills include seven industrial landfills

(i.e., non-commercial).
See Table 9.7 for a
complete list of Class
3 landfills including
permitted annual rate of disposal, FY16
disposal and estimated remaining life.

SECTION

South Carolinians disposed of 3,231,592 tons of MSW in FY16 – an increase of 5 percent (more than 155,000 tons) from the previous FY. On average, each South Carolinian disposed

of about 3.6 pounds of MSW per day – a slight increase from the previous FY.

Import and Export of Solid Waste

The amount of out-of-state solid waste disposed of in South Carolina in FY16 was 691,801 tons – an increase of 5.4 percent from the previous FY. (See Chart 9.4.) Overall, this represents about 8.2 percent of the total amount of solid waste disposed of in the state.

TABLE 9.1: S.	.C. Landfill Classifica	tions
ТҮРЕ	NUMBER OF FACILITIES IN FY16	MATERIAL ACCEPTED
Class 1	39	Land-clearing debris
Class 2	90	Construction and demolition (C&D) debris
Class 3	27	MSW, C&D debris and industrial solid waste

	FY12	FY13	FY14	FY15	FY16								
MSW Disposed of in Tons	2,935,876	2,985,852	3,067,942	3,058,338	3,213,592								
MSW Disposed of in p/p/d	3.4	3.5	3.5	3.5	3.6								
TSW Disposed of in Tons	7,696,559	7,906,522	7,918,780	8,317,621	8,376,283								
TSW Disposed of in p/p/d	9.0	9.2	9.1	9.4	9.4								

In FY16, the vast majority of out-of-state solid waste was disposed of in three Class 3 landfills – Lee County Landfill, Richland Landfill and Upstate Regional Landfill. (See Table 9.6.) Most of the solid waste imported into South Carolina during FY16 was from North Carolina and New York. Those two states combined for 90 percent (more than 622,620 tons) of the total amount of solid waste imported to South Carolina. (See Chart 9.3 and Table 9.6.)

Also see Table 9.6 for amounts of out-of-state waste imported into the state through processing facilities. By attributing this waste to the state of origin rather than the processing facility's county, a more accurate representation of out-of-state waste disposed of in South Carolina landfills is provided.

South Carolina exported 108,782 tons of solid waste in FY16 – a decrease of 45 percent from the previous FY (91,382 tons). This number can vary by year depending on the number of out-of-state landfills that report. Fifteen counties (Anderson, Charleston, Cherokee, Chester, Chesterfield, Darlington, Florence, Greenville, Greenwood,

Lancaster, Marlboro, Oconee, Pickens, Spartanburg and York) accounted for all of the exported waste, sent to Georgia and North Carolina landfills. (See Chart 9.5.)

CHART 9.3: Percentage of All Solid Waste Imported into South Carolina by State in FY16

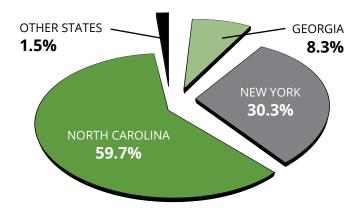

CHART 9.4: Solid Waste Imported into South Carolina

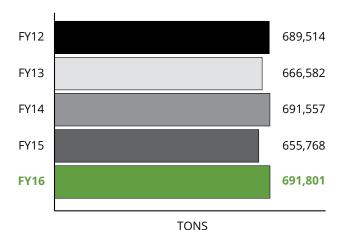

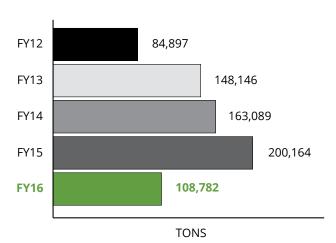

CHART 9.5: Solid Waste Exported from South Carolina

imported 691,801 tons

EXPORTED 108,782 tons

Tipping Fees

The amount charged to dispose of solid waste at a landfill – were taken from landfill reports submitted to DHEC.

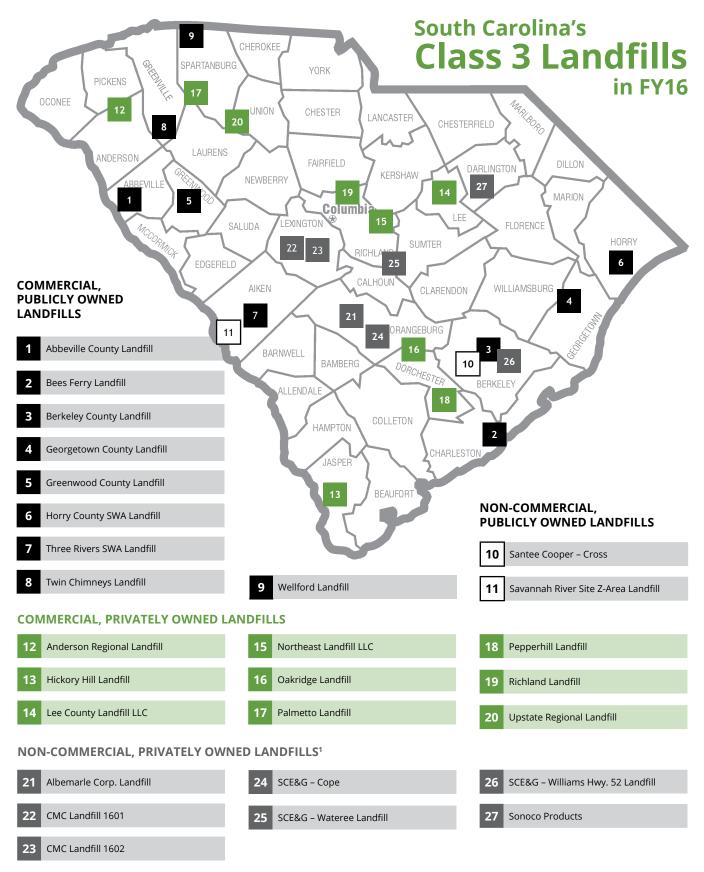

While tipping fee data is incomplete (only a portion of the facilities reported tipping fees), the average tipping fee for Class 1 disposal was \$21 – up \$4 from the previous FY. The average tipping fee for Class 2 disposal was \$28 in FY16 – up \$1 from the previous FY. In addition, the average Class 3 Landfill tipping fee was \$41 per ton in FY16 – up \$1 from the previous FY.

- 1. Solid Waste Authority
- 2. Miscellaneous from Processing Facilities represents solid waste that went through processing facilities from various states and disposed of in Class 3 landfills.
- 3. Waste imported from Georgia and North Carolina.

NOTE: Some totals may not add up due to rounding.

^{1.} Non-commercial landfills are defined by regulation as facilities that only manage the solid waste generated in the course of normal operations on property under the same ownership or control as the facility itself (i.e., "on site"). For more information, see Section 10.

[•] Did Not Report No Permitted Disposal Rate NOTE: The remaining life of Class 2 landfills is provided in months, but converted to years.

South Carolina's Permitted Solid Waste Facilities

The S.C. Solid Waste Policy and Management Act of 1991 – S.C. Code of Laws § 44-96-60 – requires the S.C. Department of Health and Environmental Control to provide an inventory of solid waste facilities.

In fiscal year (FY) 2016 (July 1, 2015 to June 30, 2016), there were 378 solid waste facilities operating under the authority of 15 types of permits in South Carolina.

Some permits apply to multiple facility types. For example, there are six types of solid waste processing facilities as well as three types of landfills and transfer stations. Of the 15 types of

TABLE 10.1: Permitted Rate Legend

СҮРҮ	Cubic Yards Per Year
GPY	Gallons Per Year
TPA	Tons Per Acre
TPD	Tons Per Day
TPW	Tons Per Week
TPY	Tons Per Year

There were 377 solid waste facilities operating in South Carolina during FY16.

solid waste permits, only three are allowed to accept MSW – Class 3 landfills, Class 3 transfer stations and Class 3 processing facilities.

Overall in FY16, there were:

- 156 landfills;
- 110 composting and wood-grinding facilities;
- 41 transfer stations;
- 20 processing facilities;
- 16 waste tire facilities;
- 16 used oil facilities;
- 7 land-application facilities;
- Five research, development and demonstration facilities;
- Five incinerators (all Air Curtain); and
- One soil treatment facility.

Tables 10.2 to 10.9 provide a complete list of the permitted facilities at the close of FY16. The tables include (when available): the facility name; county in which the facility is located; permitted rate of disposal or storage; and the tons received.

South Carolina Solid Waste Management Annual Report for Fiscal Year 2016

Solid Waste Planning

The S.C. Solid Waste Policy and Management Act of 1991 (Act) – S.C. Code of Laws § 44-96-60 – requires the S.C. Department of Health and Environmental Control (DHEC) to develop a state solid waste management plan (State Plan).

The Act (Section 44-96-80) also requires county governments or regions to develop plans that are consistent with the State Plan. This section outlines the planning and other responsibilities of state and county governments.

The State Plan is required to address a 20-year planning period and include:

- An inventory of the amount and type of solid waste currently being disposed of;
- Solid waste disposal projections;
- An analysis of the types of facilities that will be needed to manage solid waste;

- An estimate of the current capacity in the state to manage solid waste;
- SECTION 11
- An evaluation of current solid waste management practices;
- Recommendations on how the state can meet its waste reduction and recycling goals; and
- A description of public education programs developed in partnership with local governments, businesses, industry and other organizations to – among other objectives – promote waste reduction and recycling.

The State Plan was adopted in 1992 and revised in 1999. In 2006, a revision established limits for facilities that use emerging technologies.

This annual report is an update to the State Plan as required by the Act.

Local Planning Responsibilities

COUNTY/REGIONAL SOLID WASTE MANAGEMENT PLANS

As outlined above, each county is required to have a comprehensive solid waste management plan to ensure adequate disposal capacity. Counties may create and implement regional solid waste management plans.

These county/regional plans also are required to address a 20-year planning period and must be consistent with the State Plan. These plans must include:

- The amount and type of solid waste projected to be disposed of within the county or region;
- An estimate of the current capacity within that county or region to manage its solid waste;
- An analysis of existing and new facilities that will be needed to manage the solid waste generated;
- A description of the recycling program including material collected, type of public education/outreach initiatives offered to promote the program and the designation of a recycling coordinator;
- An outline of how the county or region expects to meet the state's recycling and disposal goals; and
- An estimate of the cost of implementing the plan.

DHEC considers county/regional plans when making consistency determinations for solid waste facilities. Because the county government is responsible for providing management of all solid waste, the county/regional plan should address all solid waste streams, applicable facility types and methods of treatment.

DHEC encourages counties and regions to:

- Review their solid waste management plan periodically to assess the impact of regulatory changes, new permits, population changes and waste generation trends and update their plan as needed;
- Provide opportunities for cities, towns, the public and other affected parties within the county or region to have input in the plan revisions; and
- Consult the most recent copy of the "South Carolina Solid Waste Management Annual Report" for updated solid waste data.

Beyond the State Plan, DHEC has additional responsibilities including:

- Determining consistency with state and local or regional solid waste management plans;
- Determining consistency with local zoning and other local land-use ordinances; and
- Approving Demonstration of Need (DON) for certain solid waste management facilities.

State Planning Responsibilities

CONSISTENCY DETERMINATIONS

Before a solid waste management facility can be permitted, it must be determined to be consistent with the State Plan, the county/regional plan as well as local zoning and land-use requirements.

Although a county or region is responsible for developing the local solid waste management plan, zoning ordinances and/or other land-use ordinances, DHEC is responsible for making an independent consistency determination.

DHEC looks at many factors when reviewing the county/ regional plan and making its consistency decision. Chiefly, DHEC considers the amount of waste that the county or region is projected to generate during the 20-year planning period and reviews the county or region's proposed means of managing that waste through a combination of transfer, disposal, incineration and/or recycling.

DEMONSTRATION OF NEED (DON)

DON refers to the criteria established for the geographical placement and allowable annual disposal rate of new and expanding solid waste management facilities. The original DON regulation was put into effect in June 2000. On

June 26, 2009, a revision to Regulation 61-107.17 SWM: Demonstration-of-Need became effective.

The DON regulation addresses commercial Class 3 landfills, commercial Class 2 landfills, commercial solid waste incinerators that incinerate waste other than wood waste or yard trimmings and commercial solid waste processing facilities that process waste destined for disposal at Class 3 landfills. The DON regulation stipulates that where there are at least two commercial solid waste management facilities of the same type within a specified planning area, no new facility is allowed.

CLASS 2 LANDFILLS

Class 2 landfills accept land-clearing debris, certain construction and demolition debris, certain household furniture and under certain conditions, animal carcasses. Class 2 landfills have a 20-mile planning radius. (See pages 114-115 for a map detailing Class 2 landfill locations and planning radii.) DHEC calculates allowable annual disposal at new Class 2 landfills using:

- 100 percent of the host county generation; and
- 30 percent of the generation in other counties within the planning area.

Non-Commercial Facilities

In South Carolina, a facility is defined as "non-commercial" if it manages only the solid waste generated in the course of normal operations on property under the same ownership or control as the facility itself (i.e., "on site"). Non-commercial facilities are not required to demonstrate need.

TABLE 11.1: DON Req	uirements for N	ew Solid Waste Manag	ement (SWM) Facilities
COMMERCIAL	PLANNING AREA AROUND	NUMBER OF FACILITIES ALLOWED WITHIN	THROUGHPUT/ANNUA

COMMERCIAL SWM FACILITY	PLANNING AREA AROUND FACILITY	NUMBER OF FACILITIES ALLOWED WITHIN PLANNING AREA	THROUGHPUT/ANNUAL TONNAGE CALCULATION FOR NEW FACILITIES
Class 2 Landfills	20 miles	2	100 percent of host county tonnage plus 30 percent of generation from other counties in planning area
Class 3 Landfills	75 miles	2	Total of 100 percent of host county tonnage and 50 percent of tonnage of counties in planning area without a Class 3 landfill; cannot exceed 30 percent of total state generation
Solid Waste Incinerators	75 miles	2	Based on the manufacturer's design of the incinerator not to exceed 600 tons per day
Solid Waste Processing Facilities	75 miles	2	Total of 100 percent of host county tonnage and 50 percent of tonnage of other counties in planning area

Tonnage increases for existing Class 2 facilities are allowed only if the facility is operating within 20 percent of its permitted amount, (i.e., the amount of waste disposed per year is 80 percent or more of the annual permitted capacity).

If a Class 2 landfill qualifies for an increase, it can receive the lesser of the amount that disposal in the planning area has increased since the facility last received a permitted increase or 50,000 tons.

Class 2 landfills operating on the effective date of the regulation are allowed variances from certain DON requirements with respect to replacement facilities, tonnage increases and expansions.

See Table 11.2 for Class 2 waste generated for disposal by county for use in DON.

CLASS 3 LANDFILLS

Class 3 landfills accept municipal solid waste (MSW), industrial solid waste, sewage sludge, non-hazardous MSW incinerator ash and other non-hazardous waste. For new commercial Class 3 landfills, allowable tonnage is calculated using:

- · 100 percent of the host county generation; and
- 50 percent of the waste generated in other counties within the planning area. (None is counted from other counties that have an existing Class 3 landfill.)

Class 3 landfills have a 75-mile planning radius. (See pages 116 and 117 for a map detailing Class 3 landfill locations and planning radii.)

The yearly disposal rate at an existing landfill is allowed to increase only if the facility is within 20 percent of its permitted disposal rate (i.e., the amount of waste

disposed of per year is 80 percent or more of the annual permitted capacity). If a Class 3 landfill qualifies for an increase, it can receive the lesser of the amount that disposal in South Carolina has increased since the facility last received a permitted increase or 150,000 tons.

In addition, the allowable yearly disposal rate at any Class 3 landfill cannot exceed 30 percent of the total solid waste generated in South Carolina that is destined for disposal in Class 3 landfills. Class 3 landfills operating on the effective date of the regulation are allowed variances from certain DON requirements. See Table 11.3 for Class 3 waste generated for disposal by county for use in DON.

SOLID WASTE INCINERATORS

The yearly throughput for a solid waste incinerator is based on the manufacturer's design of the incinerator, but it cannot exceed 600 tons per day. The DON regulation does not apply to air curtain incinerators that receive only wood waste and yard trimmings. The planning area for a solid waste incinerator is 75 miles. There are no permitted MSW incinerators in the state.

SOLID WASTE PROCESSING FACILITIES

The maximum allowable yearly throughput of a solid waste processing facility that processes waste destined for disposal at a Class 3 landfill is equal to:

- 100 percent of the solid waste destined for disposal that is generated in the host county; and
- 50 percent of the waste generated in each county other than the host county, that falls wholly or partially within the 75-mile planning radius.

See pages 118-119 for a map detailing Class 3 Solid Waste Processing Facility locations and planning radii.

CLASS 2

- Limits waste streams as specified in Regulation 61-107.19 SWM: Solid Waste Landfills and Structural Fill
- Waste that is characterized as less than 10 times the maximum contaminant level (MCL) and approved by DHEC may be added to the permit for acceptance/disposal

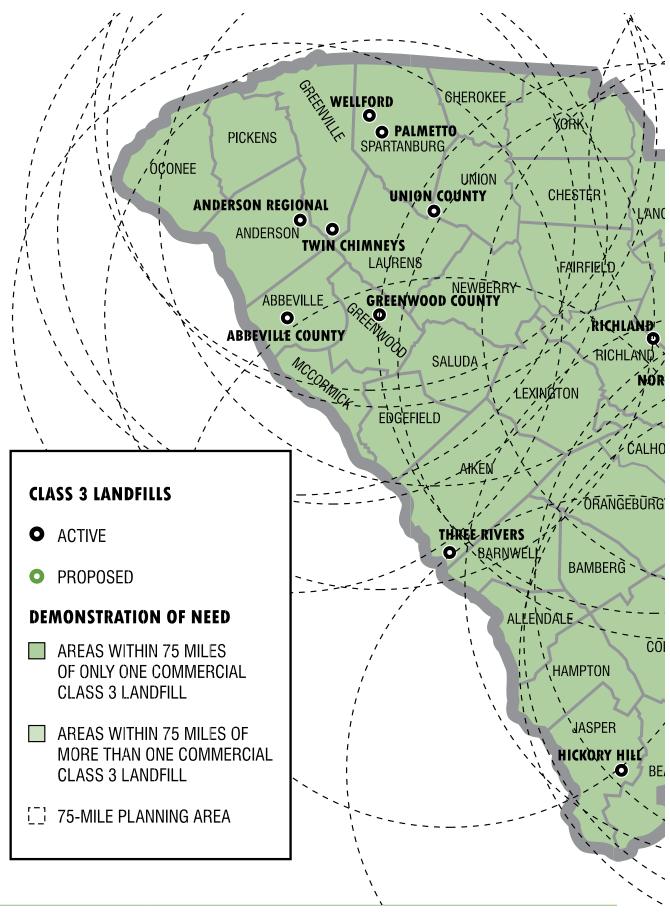

Operational Criteria:

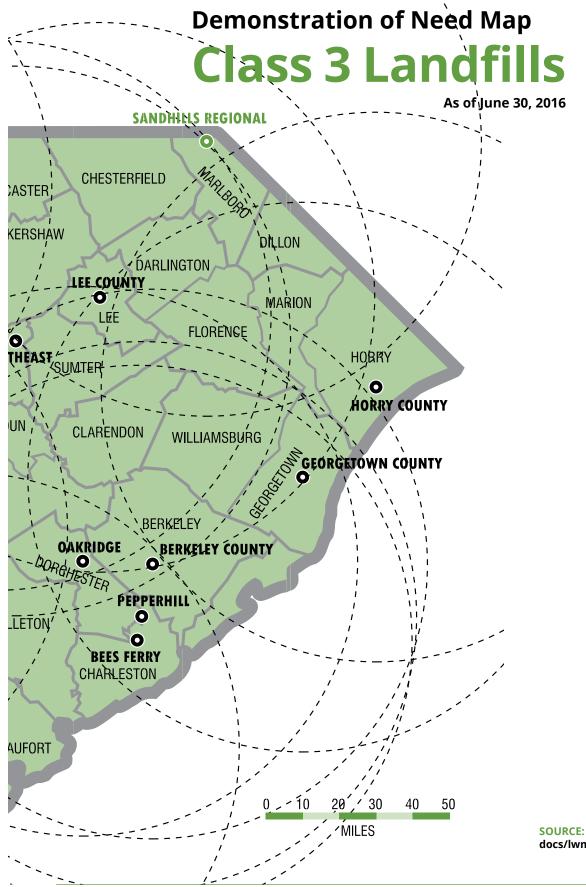

- Unauthorized waste may be stored at the facility for 30 days; except that putrescible waste must be removed within 72 hours
- An annual survey to determine landfill capacity used and the remaining permitted capacity may be required on a case-by-case basis
- Require scales but exempts scales for facilities permitted for less than 10,000 tons per year and on-site landfills

· Design Criteria:

- Require settlement calculations on the bottom elevation
- Require DHEC to inspect the landfill prior to waste placement
- Set cap requirements at 2 feet of soil
- Establish certain buffers when "Notice of Intent to File a Permit Application" is published
- Require groundwater monitoring and corrective action
- Set post-closure (20 years)
- Require closure and post-closure financial assurance

SOURCE: www.scdhec.gov/Agency/docs/lwm-regs/R61-107-19.pdf

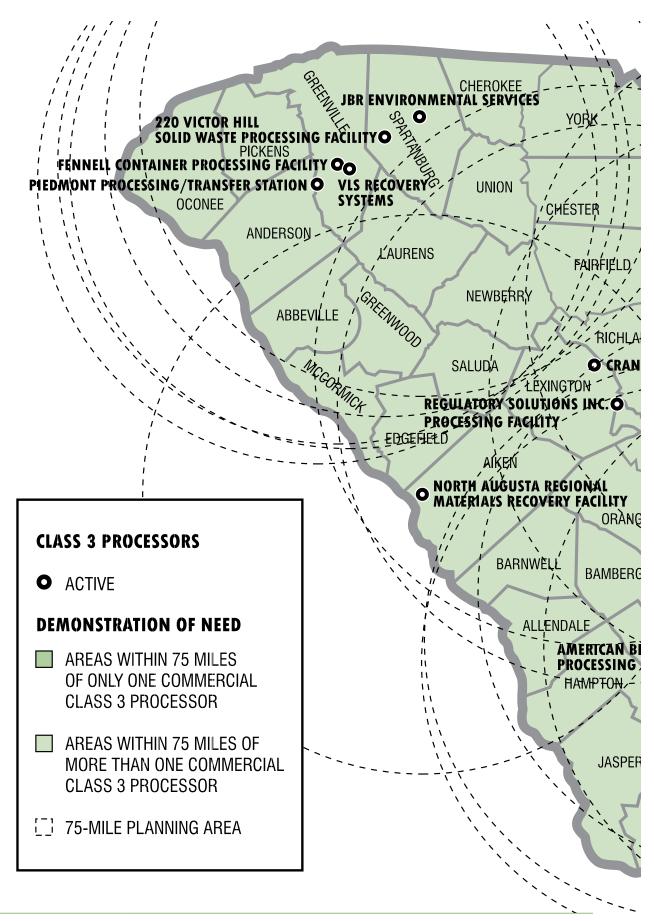

CLASS 3

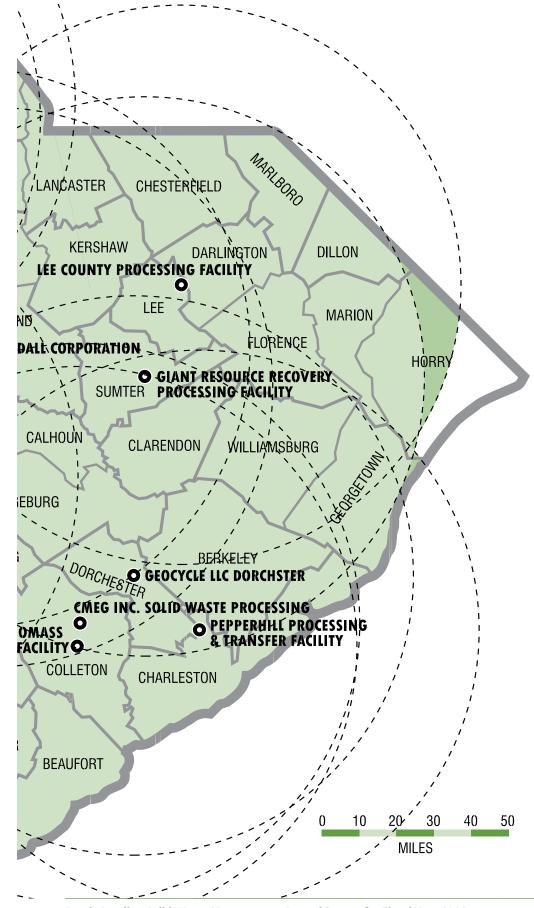

- Requires waste characterization through the Special Waste Analysis and Implementation Plan
- Requirement to inspect 10 percent of incoming loads
- Landfills that were permitted as Industrial Solid Waste Landfills prior to the effective date of this regulation are exempt from design criteria provided the waste streams remain below 30 times the MCLs
- Leachate recirculation allowed under permit modification
- Buffers established when "Notice of Intent to File a Permit Application" is published
- Notification required within 72 hours of receipt of hazardous or PCB wastes
- Monofills that accept coal combustion by-products testing less than 10 times MCL can be constructed with a clay liner system
- Slope-stability requirements
- Certification testing of cap to include:
 - One permeability test per acre
 - Four density/ thickness tests per acre
