AGENCY'S DISCUSSION AND ANALYSIS

PUBLIC SERVICE AND AGRICULTURE

Public Service and Agriculture (PSA) is a state agency comprised of four units: Clemson Experiment Station, Clemson Cooperative Extension Service, Regulatory Services, and Livestock Poultry Health. This report will highlight the purpose, accomplishments, and risk assessment and mitigation strategies of each unit.

CLEMSON EXPERIMENT STATION (www.clemson.edu/cafls/research)

The Experiment Station continues to work collaboratively to support research and outreach at our six Research and Education Centers (RECs) located across South Carolina. They are strategically located to conduct agricultural research in representative conditions of South Carolina's distinct soil and climate regions, directly benefiting producers in those areas. These RECs, collectively known as the Clemson Experiment Station, are part of a nationwide system of scientists working to improve the quality of life. The Experiment Station continues to provide comprehensive support and is committed to excellence in research with the goal of preparing the next generation of agricultural professionals and individuals with research possibilities; interacting, educating, and promoting an all-inclusive environment in support of individuals and agriculture not only in South Carolina but around the world.

As a leading land grant public research institution, Clemson University highlights its federal grant activities in this report. As in the past, there has been increased focus on integrating the Research and Education missions of the Experiment Station. We continue to highlight the increase in graduate students, many of them advised or co-advised by faculty located at the RECs. For FY 2022-23, The Clemson Experiment Station has been involved in multiple areas of research. These areas include but are not limited to the following:

Agrisystems Productivity and Profitability: In South Carolina, vegetables/ornamental plants grown in fields, greenhouses/nurseries, as well as ornamental plants and grasses maintained in urban landscapes, are highly valuable to the economy and wellbeing of our citizens. However, these plants are often attacked by a myriad of insect and pests. Predatory mites are a potential solution to some pest problems and don't require chemical applications. Several field experiments were conducted this reporting period and the results confirmed that the efficacy of predatory mites was lower on some plants than others. Larger predators may not be affected by biological control.

The cotton industry is an extremely important component to the overall economy of South Carolina. Although planted acreage varies from year to year, these farms result in approximately \$142M in revenue to South Carolina. A large percentage of the cotton production costs are associated with pest control, and weather conditions also play a vital role. Twenty-to-thirty replicated field studies were conducted at the Pee Dee and Edisto RECs, as well as at on-farm locations representative of the environments in which cotton is produced statewide. Studies involved the evaluation of varieties, herbicide systems, plant growth regulators, harvest-aid materials, seed- or soil-applied insecticides/nematicides, and agronomic practices such as plant density, planting date, tillage systems, and irrigation. Through this research, information on these management issues were improved upon in yields and fiber quality response and profitability.

Increasing feed costs and demand to meet the global food supply have increased interest within the poultry industry to reduce the heavy dependence on corn and to seek alternative feed. All commercially available US grain sorghum is tannin-free for animal feed use and may be a viable alternative to corn due to its similar metabolizable energy and nutritional profile. A Clemson study demonstrated it can be a feasible alternative depending on the variety used, cost and availability, and may allow nutritionists in the commercial poultry industry to consider this option.

Constraints on producer use of cover crops in the South include lack of knowledge regarding the best cover crops and management practices for their locality and cropping system, seed and planting costs, and potential impacts on plantavailable soil moisture, nutrients, and cash crop productivity. Clemson evaluated seven winter cover crops. This research indicated the suitability for the SE clayey soils based on biomass production, weed suppression, and improvements in soil health and will help refine cover crop selection and management practices in South Carolina.

<u>Agribusiness and Community Development:</u> Clemson University continues work on the Science, Technology, Engineering and Mathematics (STEM) program. The overarching goals were to create awareness and interest at the middle and high school levels for careers in the agricultural sciences, prepare students for academic success and professional pursuits

AGENCY NAME:	Clemson PSA		
AGENCY CODE:	P200	SECTION:	045

leading to a sustainable supply of well-educated agricultural scientists, and to develop and empower agricultural educators to effectively teach rigorous STEM content within the school-based agricultural education curriculum. The STEM it Up program (SIU) provided high-quality professional development programs for agriscience teachers. Lesson plans and materials were developed to focus on the STEM concepts that naturally occur in the field of plant science.

Environmental and Natural Resources Conservation: Clemson continues research to investigate how active forest management impacts environmental variables such as fuel accumulation, vegetation, water quality, and erosion to help forest managers better implement policies and best management practices. Various methods were compared that enhanced water availability, and scientists assessed the productivity and cost of these different practices. Fire and forest management were shown to influence the cycling of contaminants in aquatic food and the role of forest fire ash on aquatic mercury cycling, a topic with significant regional, national, and global implications. Project activities have also facilitated networking with various external collaborators.

Agriculture represents billions in economic impact to South Carolina and production must keep increasing to satisfy the demands for products and jobs in the state and enhance the quality and quantity of natural resources. Improved technologies are needed to help farmers adopt more efficient agricultural management practices. Field trials were conducted on six commercial farms and at Edisto REC to demonstrate the benefits of using a new soil moisture monitoring system previously developed for irrigation scheduling of row crops. Prototype systems were developed to automate a lateral move irrigation and a subsurface-drip irrigation system based on real-time soil moisture data communicated using a wireless sensor network and cell phone communication. Work was also performed to directly measure crop evapotranspiration. Two new soil moisture sensor prototypes were developed that will be a more affordable alternative for farmers that will transform the system to be able to automate the applications using real-time data from sensors installed in different zones in the field.

Natural resources are under increasing threat from human development. Natural areas protect wildlife and are common throughout the United States; however, much existing habitat is in the hands of private landowners. There is a need to understand how the matrix in which protected areas exist that can serve the needs of wildlife, while providing essential natural services such as water, recreation, and game for human communities. Clemson continues to conduct occupancy, abundance, and habitat use surveys on focal species with land use and climate-related factors as predictor variables. Further, records were accessed on conservation easements in rapidly growing counties as a means of facilitating conservation planning and corridor creation via private land holdings. A forest restoration project collected data to facilitate mountain longleaf pine (*Pinus palustris* Mill.) restoration.

<u>Food Safety, Security and Nutrition:</u> Researchers addressed the safety of food from bacterial and viral contamination. Intervention strategies and risks from various food sources were explored to reduce the risk of foodborne illness. The overall goals of this study were to determine the optimal concentrations of black seed oil, black seeds, kefir, and bacteriophage alone or in combination in poultry feed or drinking water to inhibit coccidiosis and prevent or lessen NE in broilers by conducting several trials of animal studies.

The use of EPA-registered disinfectants were tested to reduce the Norovirus in healthcare facilities. Our results suggested that H2O2-based disinfectants and steam vapor are more efficacious than chlorine-based disinfectants against coccidiosis. A film-based colorimetric sensor was developed using polydiacetylene to detect SARS-CoV-2 virus inhuman saliva. Various SARS components including the spike protein and N-protein antibody were tested as probes to detect the virus in hopes of a broad-spectrum sensor for the mutating variants. The sensor may be developed for use in food and non-food environments to reduce the spread of COVID-19 with early detection.

Heat stress during the reproductive stages of bean development can have a negative impact on production reducing yield and quality of pods and beans. Breeding heat tolerant snap bean and lima bean cultivars could extend the growing season, expand production areas, and increase resilience to fluctuating temperatures but is limited by a lack of genetic knowledge and large-scale germplasm screenings. As part of this project, researchers screened a diverse panel of snap bean and lima bean accessions under heat stress conditions in summer field trials and will in turn use the most heat tolerant germplasm to initiate a plant breeding program to develop new bean cultivars resilient to temperature fluctuations. The genetic diversity of snap beans was assessed through DNA sequencing of 384 accessions from the USDA National Plant Germplasm System. The snap bean accessions and current commercial cultivars were evaluated for pod production under optimal and heat-stressed conditions in replicated field trials in Charleston, SC during this reporting

AGENCY NAME:	Clemson PSA		
AGENCY CODE:	P200	SECTION:	045

period. Additionally, diverse butter bean germplasm has been acquired to initiate a breeding program targeting heat tolerance, yield, and quality for fresh market succulent beans.

Risk Assessment and Mitigation Strategies for Clemson Experiment Station: The Clemson Experiment Station conducts research on the main campus at Clemson University and on each of the six Research and Education Centers across the state that benefits South Carolina agriculture and natural resources. Failure to fulfill our research mission would result in decreased public opinion regarding our research program, decreased research funding levels to continue support of our mission, and dramatic impacts on multiple stakeholder issues. These issues include agriculture and forest productivity and profitability, and research-based recommendations that impact water quality and environmental sustainability through policies or on-farm practices. If Clemson is unable to fulfill our research mission, some of these impacts could be partially mitigated via collaborations with neighboring land grant institutions. However, full mitigation is likely impossible.

CLEMSON COOPERATIVE EXTENSION SERVICE (www.clemson.edu/extension)

Clemson Cooperative Extension Service is proud to serve the citizens of South Carolina in the areas of agronomic crops, agribusiness, agricultural education, food systems and safety, forestry and natural resources, horticulture, livestock and forages, rural health and nutrition, and 4-H youth development. During FY22-23, Clemson Cooperative Extension Service directly served 181,530 people through 9,081 workshops and one-on-one farm visits that were conducted either face-to-face or virtually. Furthermore, we had 20,280,643 indirect contacts. While all efforts undertaken by Clemson Cooperative Extension Service staff were impactful, we highlight efforts in each program area.

4-H Youth Development: The Clemson Cooperative Extension 4-H Youth Development program continues to serve youth in the areas of STEM (science, technology, engineering, and math), citizenship, and healthy lifestyles. Statewide programming offered in the area of STEM included chicken embryology, Wildlife Habitat Enhancement Program (WHEP), monarch butterfly conservation, biological sciences, Junior Master Gardener, physical sciences, the Engineering Challenge, engineering design, Ozobot, aerodynamics, natural resources conservation, and 4H2O. Healthy lifestyle programs were taught, and the principles reinforced through school and community garden projects, healthy cooking classes, healthy eating choices lessons, cultural differences in food and food preparation, kitchen safety, exercise, and farm to table concepts and sensory gardens, among others. Finally, adults mentor youth in leadership opportunities so they can grow into future community leaders. Programs that enable youth to build leadership skills include the Junior Leadership Program, the Pinckney Leadership Program, and incorporation of youth into 4-H County Advisory Boards, just to name a few.

Agribusiness: Maintaining South Carolina's \$28.6 billion agricultural industry requires supporting all aspects of a farming operation, including economic sustainability. Clemson Extension Agribusiness Agents provide business-related education to help farmers maintain and grow their farms. One area for potential farm growth is in agritourism, where Clemson Extension Agribusiness Agents lead the development and growth of the SC Ag+Art Tour. This agritourism opportunity is a free, self-guided tour of farms that also features local artists displaying their work at the farms. The SC Ag+Art Tour attracted over 2,000 farm visitors, increasing the opportunity for on-farm purchases of commodities to local community members. The 2023 tour was the largest free farm and art tour in the nation.

Another focus area for the Clemson Extension Agribusiness program team is women in farming, an underserved group. Women comprise more than 14% of farmers/producers in SC and are taking on more active day-to-day operational roles. Programs for women were offered in the areas of farm safety, farm stress management, livestock and forages production, pesticides, food safety, irrigation water safety, risk management, and marketing.

Agronomic Crops: Agriculture contributes \$28.6 billion annually to SC's economy, making it one of the largest industries in SC. Clemson Extension Agronomic Crop Agents support this critical sector by providing the latest research and technological advances to farmers so they can make informed crop planting, cultivation, and harvesting decisions. Cotton is one of the most economically important crops covering 270,000 acres. Clemson Extension Agronomic Crop Agents conducted workshops to educate cotton farmers on variety selection, emerging threats due to increased nematode populations, planting options impacted by weather conditions, fertility, and other topics. Corn and soybeans are also important crops, covering 725,000 acres. Like cotton, these crops also present challenges for farmers to remain economically viable. Field trials for corn showed a 40 bushel/acre difference between the top and lowest performing

AGENCY NAME:	Clemson PSA		
AGENCY CODE:	P200	SECTION:	045

varieties. For a corn farmer on 600 acres, this could be the difference of 24,000 bushels of corn. At approximately \$7.35/bushel, a farmer has the potential to increase income by \$176,000 per year. Therefore, continued efforts to educate farmers on the latest varieties and research is imperative to providing a sustainable food supply that is also economically sustainable for farmers.

<u>Food Systems and Safety:</u> Foodborne illnesses are a significant public health threat. The CDC estimates that 48 million people get sick, 128,000 are hospitalized, and over 3,000 die due to foodborne illnesses each year. The spread and negative results of these foodborne pathogens can be prevented through safe handling techniques and practices. Clemson Extension Food Systems and Safety Agents worked to decrease the occurrence of foodborne illnesses by teaching workshops to increase knowledge and providing the skills necessary to properly handle, store, and preserve food. These skills prevent loss of income, time, and health for food handlers and the general public.

Food preservation is also important since the average family of four contributes almost 43% of all food wasted. However, low-acid foods like most vegetables and meat must be pressure canned to be properly preserved. Classes on how to pressure can were taught to homesteaders and hobby farmers to help prevent foodborne illnesses in families and the community that may obtain canned products from local farms. This also helps to reduce food waste.

Forestry and Natural Resources: The SC Department of Natural Resources estimates that there are over 80,000 ponds in the state. The health of a pond reflects the environmental impact on the waterway downstream. Pond management is complex and diverse, depending on the use of the pond, surrounding land use, and flow to other water bodies. Clemson Extension Water Resources Agents have worked to increase pond health and subsequently, improve water quality through activities such as the Post-Construction BMP Inspector Program, sanitary sewer overflow campaigns, lead testing information for drinking water, pet waste impacts, stormwater management, algae blooms, and other water quality programs. These efforts reach private homeowners, community members, pet owners, water management professionals, and government utility and infrastructure officials.

Forests are another important natural resource in SC that supports a forest industry with an economic impact of \$23.2 billion annually. With 66% of all land in SC being forested and 87% of the forests being privately owned, information on how to maintain healthy forests is critical for protecting the forest industry and the natural resources within the forests. Clemson Extension Forestry and Natural Resources Agents facilitated learning opportunities for landowner and forestry professionals through a variety of hands-on and classroom events. Forestry topics such as harvesting operations, reforestation, pine genetics, alternative income opportunities, forest wildlife management, small woodlot management, timber taxation, and urban tree management were taught to promote healthy forests.

Horticulture: Specialty crops in SC can generate significant income for farmers and contribute to the state's economy. Programs aimed at creating more sustainable production systems is the primary focus of Clemson Extension Commercial Horticulture Agents. One program focused on cucurbit production taught growers how to utilize specific fungicide and insecticides that can save input costs of over \$30/acre. With an estimated 2,459 acres of watermelons alone (does not include squash, cucumbers, or cantaloupe), a single Clemson Extension program potentially saved watermelon growers in excess of \$76,000. Other specialty crop programs focused on pea and bean production, peaches, blueberries, blackberries, and grapes.

Home gardening and landscaping is also an important horticultural industry for SC. Providing information on home vegetable gardens is imperative, especially to citizens that live in food deserts. Clemson Extension Horticulture Agents conducted programs that taught soil health, fertilizer application, variety selection, planting timing for crops, sanitation and other practices. Some of these same principles were also taught in the context of home landscaping. Clemson Extension Master Gardener graduates and volunteers help to meet the need for information by providing community service and education to homeowners with garden and landscaping questions. Master Gardeners contributed \$1,861,416 in volunteer time for FY 2022-2023.

<u>Livestock and Forages:</u> The Clemson Extension Livestock and Forages team continues to offer programming to educate producers on topics that support economic and environmentally sustainable farming operations. Educational events in the areas of winter annual forages, weed identification and management, basic animal husbandry, agribusiness, diseases and others were offered both virtually and in-person. Another service provided by Clemson Extension Livestock and Forages agents involve coordinating an off-farm feeder cattle sale for cattlemen in a tri-county area. In FY22-23 this effort resulted in \$0.32 per pound higher prices compared to traditional auction markets for an additional \$11,605 in

AGENCY NAME:	Clemson PSA		
AGENCY CODE:	P200	SECTION:	045

revenue per farm. This is even more important since many producers own 10 head of cattle or less. Agents also provided climate-smart agricultural assistance to 121 beef cattle producers that represent 46,939 farm acres.

Post-program evaluations showed that 89% of program attendees learned a new practice, technique, or tool as a direct result of participating in Extension livestock and forages programs. Further, 81% plan to implement a new practice taught by Clemson Extension Livestock and Forages Agents.

Rural Health and Nutrition: Diabetes and heart disease continue to plague Americans across the country. It is estimated that 37.3 million Americans are currently living with diabetes. Further, diabetes is the most expensive chronic condition facing the nation at an annual cost of \$327 billion. Diabetes can also lead to other complications such as cardiovascular disease, heart attack, or stroke, with heart disease continuing to be the leading cause of death in South Carolina. The goal of the Clemson Extension Rural Health and Nutrition team is to serve South Carolinians, particularly rural residents that experience health disparities due to sociodemographic factors, by providing chronic disease prevention and self-management educational programs (Know Diabetes by Heart and Health Extension for Diabetes Education). Other programs were offered that were aimed at increasing exercise levels to also help manage and prevent chronic diseases.

Risk and Mitigation Strategies for Clemson Cooperative Extension Service: Clemson Extension's mission is to improve the quality of life for all South Carolinians through education. The impact on the public if Clemson Extension is unable to fulfill its mission would be: 1) economic downturn for agricultural and forestry clients, 2) loss of guidance for agricultural and forestry production, 3) loss of licensure for private and commercial pesticide applicators, 4) loss of agricultural tax credits for CPAs, 5), loss of emergency preparedness for natural disasters, 6) loss of rural health and wellness, and 7) loss of life skills development for youth. Partnerships with surrounding states to provide educational services would be a possible mitigation strategy in the unlikely event Clemson Extension cannot fulfill its mission.

REGULATORY SERVICES (https://www.clemson.edu/public/regulatory)

Regulatory Services protects the state from exotic and invasive species, ensures that pesticides are used safely and according to state and federal law, regulates the structural pest control industry, verifies that fertilizer and lime meet standards and labeled guarantees, conducts programs for seed and organic certification, provides diagnosis of plant pests, soil and other agricultural related lab analyses, and ensures readiness to respond to a catastrophic event impacting the state's agriculture. The impact on the public if Clemson Regulatory Services is unable to fulfill its mission would be: 1) an increased risk to environmental and human health from potential pesticide misuse, 2) loss of productivity for growers due to poor fertilizer quality or a lack of soil nutrient testing, 3) increased risks from plant insects or diseases due to reduced plant pest identification, monitoring, and control programs in agriculture, forestry, and the plant nursery industry, 4) loss of emergency response for natural disasters under the state ESF-17 Plan.

Continued funding from the SC General Assembly for recurring and non-recurring program needs will ensure that Regulatory Services will be able to continue to meet our state and federal program requirements and protect South Carolina.

Agriculture Services Lab: If the Agriculture Services Lab (ASL) were no longer able to function, the agricultural and horticultural communities would not have a cost-effective agricultural testing laboratory within SC to ensure nutrient content and management for crop production. Additionally, testing required for permitting of agricultural animal facilities and land application of solid waste could not be completed in SC.

Fertilizer Regulatory and Certification Services: Fertilizer Regulatory and Certification Services regulates the manufacture, label, registration, and content of fertilizers, liming materials, and soil amendments, as well as administers the Certified Seed/Turfgrass program and assists with the solar pollinator program statewide. Without the oversight of FRCS, consumers would not have protection from purchasing inadequate agricultural fertilizers and liming materials, and the public would be endangered by unregulated sales of explosive fertilizer materials, like those used in the Oklahoma City bombing. Furthermore, negative economic impacts would occur from the loss of certified seed/turfgrass crops. The solar pollinator program helps provide habitat for pollinators and assorted wildlife. If FRCS could not continue to conduct these programs, other agencies such as the South Carolina Department of Agriculture, the South Carolina Department of Health and Environmental Control, Homeland Security, and the SC Department of Natural Resources could assist.

AGENCY NAME:	Clemson PSA		
AGENCY CODE:	P200	SECTION:	045

<u>Department of Pesticide Regulation:</u> The Department of Pesticide Regulation (DPR) is the Regulatory Agency for all Pesticide Laws and Programs in South Carolina. One of these programs is the Federal Worker Protection Standard Regulation (40:CFR 170), which DPR contracts with EPA to implement and enforce in South Carolina. This regulation is critical to ensure the health and safety of agricultural farm workers and agricultural growers in South Carolina.

It would be detrimental to the safety and well-being of South Carolina's agricultural community if DPR investigators were unable to inspect these operations (farms, forests, nurseries, and greenhouses) to ensure pesticides are applied properly and documented appropriately; agricultural growers and workers are protected from pesticide exposure; pesticide safety training is conducted and proper personal protective equipment is available and utilized by applicators, pesticide handlers and agricultural workers.

Another program that the DPR contracts with EPA is the Integrated Pest Management (IPM) in Schools program. This program deals with pesticide use and safety in our public-school systems. This program educates public school systems on how to handle pest management and chemicals properly and safely around school children and school staff. The inability of investigators to inspect and educate these school systems could lead to the possibility of pesticides not being used in the safest and least contact manner in our public-school systems.

DPR also contracts with EPA regarding the inspection of companies that produce or repackage pesticide products in South Carolina. Specially trained inspectors routinely inspect these companies to ensure they are producing or repackaging pesticide products that are properly registered with EPA and the SC DPR. Misbranded, illegal pesticide products and products that could cause harm to humans, animals, and the environment could be produced and released to the public if DPR inspectors were not allowed to conduct these inspections across the state.

The Department of Pesticide Regulation handles the approval of all continuing certification programs for the recertifying of licensed pesticide applicators in the state of South Carolina. These recertification programs are necessary to ensure pesticide applicators continue their training of new pesticide products, labeling changes, and pesticide use. If the recertification approval program was eliminated and training programs were not available, then the state could see pesticide misuse situations increasing such as pesticide drift, poisonings, health issues, and overall adverse effects on humans and the environment.

Invasive Species Program: If no surveys were carried out to detect potential invasive plant pest species or to identify and treat currently infested sites, the South Carolina agricultural industry would face a greater risk from undetected pest problems and/or closed interstate and international markets. Other states and countries often prohibit commodities and products without verification of pest freedom provided by survey results and treatment reports obtained by plant pest regulatory agencies. If Clemson's Department of Plant Industry could not carry out these surveys and treatments, another entity with regulatory authority would need to provide outside help to mitigate the risk. One option would be to gain assistance from a federal agency, specifically, USDA APHIS PPQ, which provides a similar service but with a smaller footprint in South Carolina. Another option would be for the General Assembly to grant plant pest regulatory authority to another state agency or contractor that could carry out the necessary invasive plant pest surveys and treatment work. Apiary Program: Public outreach is a critical component to program development and growth. The Apiary Inspection Program (AIP) works closely with Clemson's Extension Apiculture Specialist, the South Carolina Beekeepers Association, the South Carolina Farm Bureau Apiculture Committee, the Apiary Inspectors of America, and local beekeepers' associations in SC. The AIP Manager attends regularly held meetings and is frequently asked to speak and present on honeybee related topics. If the AIP Manager was unable to complete the duties assigned, co-workers in Clemson University's Department of Plant Industry have been trained to conduct inspections, collect diseased samples, and assist beekeepers with import and export requirements.

Asian Longhorned Beetle Program: The South Carolina Asian Longhorned Beetle (ALB) Eradication Program was formed in collaboration between Clemson University Department of Plant Industry (DPI) and the United States Department of Agriculture (USDA) on June 11, 2020, in response to the confirmed detection of ALB in Hollywood, SC. The ALB Program, funded through cooperative agreements with USDA in place since September 1, 2020, works to eradicate ALB from the state of South Carolina through multiple operation areas including survey, regulatory enforcement, tree removal, and outreach. The ALB Program primarily works in Charleston County, but some operations occur as needed in other counties statewide. During FY22–23, the ALB Program surveyed 112,717 host trees, with 1,641 new detections inside the quarantine area. Tree removal eliminates the opportunity for the beetle to spread, and in FY22-23, the ALB Program removed 1,544 infested trees and 2,042 high-risk host trees. During FY22-23 the ALB Program met with entities working

AGENCY NAME:	Clemson PSA		
AGENCY CODE:	P200	SECTION:	045

with regulated articles resulting in 29 compliance trainings, 10 new compliance agreements and executed 11 renewals. The ALB Program works to proactively educate the public about ALB and maintain good relationships with stakeholders in the community. The ALB Program developed and distributed printed outreach materials to property owners, residents, agencies, community groups, and organizations. During this period the ALB Program attended more than 25 organized events to share information and distribute outreach materials. Managerial work included securing the \$5.4 million cooperative agreement with USDA, maintaining a Memorandum of Agreement with College of Charleston and USDA to utilize 1.5 acres of land for an ALB Program office, purchasing equipment and supplies to support program activities and hiring five people to maintain a team of eight full-time dedicated ALB Program staff.

<u>Organic Program:</u> The Organic Certification Program provides South Carolina Agribusiness with an optional market-added certification that is local, affordable, non-biased and meets the USDA's National Organic Program (NOP) Standards. If we were unable to provide these services for any reason, the South Carolina Organic Industry would have to seek out-of-state certification at a higher cost. The state would no longer have an agency working to protect organic integrity on South Carolina's behalf. The cost of organic goods could rise. Additionally, the NOP just released its ruling regarding Strengthening Organic Enforcement, which will impact all aspects of the organic supply chain. The Clemson Organic Certification Program strives to build and improve the organic community in South Carolina to educate the public, offer certification to impacted community members, and provide overall clarification regarding compliance with new regulations.

Plant Pest Diagnostic Clinic: The Plant Industry Labs include the Plant and Pest Diagnostic Clinic (PPDC), the Molecular Pathogen and Pest Detection (MPPD) Laboratory, and the Commercial Turfgrass Clinic (CTC). The Nematode Assay Lab (NAL) at the Clemson University Department of Plant and Environmental Sciences serves under contractual agreement with PPDC to identify plant parasitic nematodes. The mission of Plant Industry Labs is to detect and document agricultural pests and diseases and inform our clients of such, providing them with management recommendations based on sound science. We strive to provide accurate, reliable, and timely diagnostics, along with our support of the surveillance work performed by Inspectors of the Department of Plant Industry, of which we are a part. Our plant pathologists, entomologists, and botanists serve as primary identifiers for Clemson University. During the FY22-23, the PPDC processed a total of 1,139 samples, representing an approximately 14% increase from FY21-22. The revenue of the MPPD Lab increased significantly (FY21-22 sample load: 97; FY22-23: 216). On the other hand, the sample load of the CTC decreased from 49 to 32. The Plant Industry Labs will devote additional resources to provide training opportunities for the CTC diagnostician and to develop service advertising and promotion strategies to generate additional CTC revenue. The sample load of the NAL decreased from 1503 to 999. Discussions have been undertaken between PPDC and NAL managers to increase NAL revenue, improve testing quality, and streamline collaborative sample handling.

Dr. Xiao Yang is the Diagnostician and Manager of the Plant Pest Diagnostic Clinic. Dr. Glenn Coburn will serve as the back-up diagnostician when Dr. Yang is on leave. If both Diagnosticians cannot perform the diagnostic duties for any reason, samples will be sent to a diagnostic lab in another state to continue to serve clients and mitigate any negative impact on the public.

<u>Nursery Program</u>: The Department of Plant Industry's Nursery Program is a regulatory agency tasked with enforcing state and federal laws pertaining to the sale and distribution of live nursery stock in SC. Through the Nursery Program, certification of pest freedom is provided for nursery stock being sold in SC and moved out of SC. This is accomplished by licensing and inspecting all nursery growers and dealers in South Carolina. Without the Department of Plant Industry's Nursery Program, responsibility would most likely fall under the direction of USDA – APHIS – PPQ.

<u>Regulatory Special Investigation Unit (SIU):</u> SIU handles all criminal investigations in Regulatory Services of both state and federal law. In the event we could not carry out our duties, we could not protect SC citizens and industries, or honor our federal mandates.

LIVESTOCK POULTRY HEALTH (www.clemson.edu/public/lph)

<u>South Carolina Meat-Poultry Inspection Department:</u> SCMPID completed its annual assessment by USDA Food Safety Inspection Service and continued to be designated as the "at least equal to". This review is to ensure a safe, wholesome, properly labeled meat and poultry supply. The South Carolina program continues to meet or exceed the federal requirements. Department activities included 100% online inspection during slaughter operations on 1,149 slaughter

AGENCY NAME:	Clemson PSA		
AGENCY CODE:	P200	SECTION:	045

days that processed 32,801 livestock and more than 3 million poultry. Additionally, the department performed 36,861 individual inspection procedures during inspection in 71 slaughter and processing facilities served.

If SCMPID was unable to meet its goal and objective of protecting the health of consumers by providing a comprehensive inspection service to ensure safe, properly labeled, wholesome meat and poultry products through inspections and regulation in state and federal cross-utilization meat and poultry plants, then unsafe, improperly labeled, and unwholesome meat and poultry products could enter into commerce and potentially be consumed by citizens of South Carolina. This could lead to food-related illness and even death from consuming these products. If this were to occur, outside assistance from South Carolina Department of Health and Environmental Control, South Carolina Department of Agriculture, and USDA Food Safety Inspection Service will most likely be required. These agencies could assist with additional inspection personnel, information gathering capacity, and access to additional resources.

To help resolve the issue before it became a crisis, the General Assembly could temporarily authorize paid overtime, make additional state funds available to cover this overtime, and allow and streamline the hiring of short time temporary staff.

<u>Clemson Veterinary Diagnostic Center:</u> Potential Risk and Negative Impact: Not being able to provide diagnostic, regulatory, and surveillance testing services in a catastrophic event would negatively impact animal health, movement, trade, food safety, and public health.

Mitigation strategies:

- 1. Identify other State or veterinary diagnostic labs to outsource testing temporarily, until the lab is functional.
- 2. Procure and set up a mobile lab to provide testing for high-priority samples.
- 3. Request additional funds and resources to make the lab functional ASAP.

One thing to consider is 'necropsy of animals'. In this situation, a large dead animal can't be shipped to another lab and clients will no longer have access to necropsy services. One solution could be encouraging veterinarians to perform field necropsies and share pictures with pathologists for consulting. Tissues can be sent to other labs for histopathology and other required tests.

Requests for the General Assembly:

- 1. Immediate emergency funding
- 2. Possible compensation to veterinarians to encourage field necropsies of dead animals

ANIMAL HEALTH PROGRAMS: Potential Risk and Negative Impact: South Carolina has a robust poultry and livestock industry. The poultry processing and poultry and egg production account for approximately \$3.51 billion to the direct economic output of South Carolina. Last year, the Animal Health Programs responded to two foreign animal disease cases (highly pathogenic avian influenza and rabbit hemorrhagic disease virus type-2), and completed an investigation on equine infectious anemia that resulted in eight euthanized animals at the end of the investigation protecting the horse industry.

The potential risks of not being able to perform animal disease investigations, animal disease responses, animal disease traceability, and livestock market inspections in a catastrophic event will negatively impact the state's public and animal health which may end up with mass animal carcass issues, animal movement, national and international trade, food safety and availability, and disrupt the commercial industry and state's economy.

Mitigation strategies:

Pending the cause of the catastrophic event, mitigation strategies may include:

- 1. Communicate with veterinarians and the commercial animal industry stakeholders for disaster and disease preparedness.
- 2. Work with emergency management and other external stakeholder groups to develop teams for preparedness and response.
- 3. Identify neighboring state and federal agencies to request trained personnel for assistance.

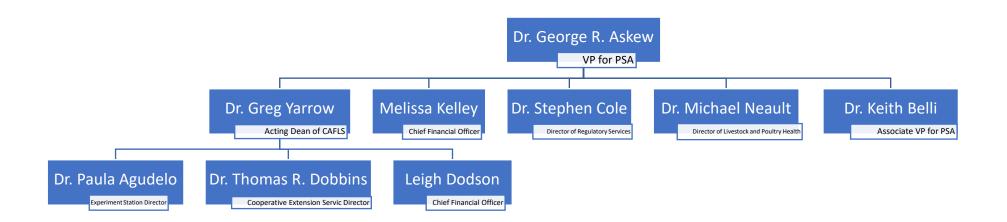

Minimal requests will be made to the General Assembly for:

- 1. Immediate emergency funding to assist in relief and response efforts.
- 2. Overtime and appropriate compensation for responders assisting with the event.

¹ Joseph C. Von Nessen, PhD, SCDA - The Economic Impact of Agribusiness in South Carolina and the Certified South Carolina Grown Program, February 2022, 5.

Strategic Plan Results

as submitted for the Accountability Report by

FY2023

P200 - Clemson University- PSA

Goal 1	The Clemson Experiment Station aims to identify	critical issues and find solution	is through research that support
	South Carolina's agriculture and forest industries		

Goal 2 The Clemson Cooperative Extension Service will improve the economy, environment, and well-being of South Carolinians through the delivery of unbiased research-based information and education.

- Goal 3 Clemson Livestock Poultry Health will ensure the continued health of the livestock and poultry industry, ensure safe, wholesome, properly labeled meat and poultry products, and protect the public health of the citizens of South Carolina.
- Goal 4 Regulatory Services protects the citizens of South Carolina and the environment by implementing legislatively mandated regulatory programs and by providing other essential programs and services for agriculture and related sectors and for homeowners.

Perf. Measure						Desired					Stakeholder Need		State Funded Program Number	
Number 1.1	Description Enhance research prominence in focus areas that maintain and support the g				Value Type	Outcome	Applicable	Calculation Method	Data Source : Education, Training,	Data Location	Satisfied	Primary Stakeholder	Responsible	Notes
								·						
1.1.1	The number of research proposals and funding requests submitted to granting agencies	362	250	388	3 Count	equal to or greater than	State Fiscal Year (July 1 - June 30).	Total number count	INFO-ED	Clemson Server	Individual grant submissions are typically defined by input from multiple sources of stakeholders.	Stakeholders providing input for external grant submissions include commodity groups (i.e. SC Soybean Board), producer organizations (i.e. Farm Bureau) and individual producers.	3004.000000.000	
1.1.2	The number of research proposal funded extramurally	138	150	184	Count	equal to or greater than	State Fiscal Year (July 1 - June 30).	Total number count	INFO-ED	Clemson Server	Basic research that identifies potential solutions to agricultural and forest industries challenges	Scientific community; Citizens of SC	3004.000000.000	
1.1.3	The number of technical contributions related to research	71	90	126	Count	equal to or greater than	State Fiscal Year (July 1 - June 30).	Total number count	Experiment Station Data	Clemson Server; Experiment Station Office	Results of research disseminated to the scientific community for continued investigation and the transfer of technology to agricultural and forest industries.	Scientific community; Citizens of SC	3004.000000.000	
1.2	Strengthen applied research through connections between Clemson Universit	y scientists and grow	ers.			•		State Objective	: Education, Training,	, and Human Develop	nent			
1.2.1	Research proposals that respond to the needs of commodity boards	43	60	48	Count	equal to or greater than	State Fiscal Year (July 1 - June 30).	Total number count	INFO-ED	Clemson Server	Crop specific commodity boards define research needs annually and calls for research proposals to address those needs.	Commodity boards are elected by South Carolina producers.	3004.000000.000	In recent years there has not been sufficient calls from commodity boards due to lack of funding: therefore, we are not reaching our target with these entities.
1.3	Improve undergraduate and graduate education experiences offered at RECs							State Objective:	: Education, Training,	, and Human Develop	ment		<u> </u>	
1.3.1	Number of graduate students recruited and retained	390	150	394	Count	equal to or greater than	State Fiscal Year (July 1 - June 30).	Total number count	Office of Institutional Research	Clemson Server; Office of Institutional Research	Research results and practices to improve production and/or reduce costs and environmental impacts of agriculture and forestry production.	Ag/forestry producers and industry representatives located in the region of the Research and Education Centers.	3004.000000.000

Strategic Plan Development

as submitted for the Accountability Report by

FY2024

P200 - Clemson University- PSA

Goal 1 The Clemson Experiment Station aims to identify critical issues and find solutions through research that support South Carolina's agriculture and forest industries.

Goal 2 The Clemson Cooperative Extension Service will improve the economy, environment, and well-being of South Carolinians through the delivery of unbiased research-based information and education.

Goal 3 Clemson Livestock Poultry Health will ensure the continued health of the livestock and poultry industry, ensure safe, wholesome, properly labeled meat and poultry products, and protect the public health of the citizens of South Carolin

Goal 4 Regulatory Services protects the citizens of South Carolina and the environment by implementing legislatively mandated regulatory programs and by providing other essential programs and services for agriculture and related sectors and for homeowners.
